Safety Warnings

The Global Positioning System (GPS) is operated by the U.S. Government, which is solely responsible for the accuracy and maintenance of the GPS network. Accuracy can also be affected by poor satellite geometry and obstructions, like buildings and heavy canopy.

FCC Interference Statement

This equipment has been designed to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules in the Portable Mode. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

Operation is subject to the following two conditions: (1) this device may not cause harmful interference and (2) this device must accept any interference received, including interference that may cause undesired operation.

CE Interference Statement

Declaration of Conformity: Hereby, Shanghai Huace Navigation Technology Ltd. declares that this i93 is in compliance with the essential requirements and other relevant provisions of Directive 2014/53/EU. A copy of the Declaration of conformity can be found at Shanghai Huace Navigation Technology Ltd.

Conformity to Japanese regulations

Japanese Radio Law and Japanese Telecommunications Business Law Compliance.

• This device is granted pursuant to the Japanese Radio Law and the Japanese

Telecommunications Business Law .

• This device should not be modified (otherwise the granted designation number will become invalid).

1 Introduction

The i93 GNSS Receiver User Guide describes how to set up and use the CHC[®] i93 GNSS receiver. In this manual, "the receiver" refers to the i93 GNSS receiver unless otherwise stated. Even if you have used other Global Navigation Satellite Systems (GNSS) products before, CHC recommends that you spend some time reading this manual to learn about the special features of this product. If you are not familiar with GNSS, go to <u>www.chcnav.co m</u> for an interactive look at CHC and GNSS.

1.1 Safety Information

1.1.1 Warnings and Cautions

An absence of specific alerts does not mean that there are no safety risks involved.

A Warning or Caution information is intended to minimize the risk of personal injury and/or damage to the equipment.

WARNING - A Warning alerts you to a potential misused or wrong setting of the equipment.

CAUTION - A Caution alerts you to a possible risk of serious injury to your person and/or damage to the equipment.

1.2 Regulations and Safety

The receivers contain a built-in wireless modem for signal communication through Bluetooth[®] wireless technology or through external communication data link. Regulations regarding the use of the wireless modem vary greatly from country to country. In some countries, the unit can be used without obtaining an end-user license. However, in some countries, the administrative permissions are required. For license information, consult your local dealer. Bluetooth[®] operates in license-free bands.

Before operating a i93 GNSS receiver, determine if authorization or a license to operate the unit is required in your country. It is the responsibility of the end-user to obtain an operator's permit or license for the receiver for the location or country of use.

1.2.1 Use and Care

This receiver is designed to withstand the rough environment that typically occurs in the field. However, the receiver is high-precision electronic equipment and should be treated with reasonable care.

CAUTION - Operating or storing the receiver outside the specified temperature range will cause irreversible damage.

1.3 Technical Support

If you have a problem and cannot find the information you need in this manual or CHC website (<u>www.chcnav.com</u>), contact your local CHC dealer from which you purchased the receiver(s).

If you need to contact CHC technical support, please contact us by email (<u>support@chcnav.com</u>) or Skype (chc_support).

1.4 Disclaimer

Before using the receiver, please make sure that you have read and understood this User Guide, as well as the safety information. CHC holds no responsibility for the wrong operation by users and for the losses incurred by the wrong understanding about this User Guide. However, CHC reserves the rights to update and optimize the contents in this guide regularly. Please contact your local CHC dealer for new information.

1.5 Your Comments

Your feedback about this user guide will help us to improve it in future revision. Please email your comments to support@chcnav.com.

2 Getting Started with i93

2.1 About the Receiver

The new CHCNAV i93 GNSS receiver offers integrated IMU-RTK technology to provide a robust and accurate GNSS positioning in any circumstances. Unlike the standard MEMS based GNSS receivers, the i93 GNSS IMU-RTK combines state-of-the-art GNSS RTK engine, calibration-free professional IMU sensor and advanced GNSS tracking capabilities. Survey projects are achieved with high productivity and reliability pushing the boundaries of conventional GNSS RTK survey.

The LCD panel enables user to check satellite-tracking status, internal battery status, Wi-Fi status, working mode, data logging status and basic receiver information. Bluetooth and Wi-Fi technology provides cable-free communication between the receiver and controller.

The receiver can be used as the part of an RTK GNSS system with CHC LansStar7 software. Moreover, user can download the GNSS data that recorded in the internal memory of receiver to a computer.

The receiver can be used as the part of an RTK GNSS system with CHC LandStar 7 software. And you can download the GNSS data that recorded in the internal memory of receiver to a computer.

To configure the receiver for performing a wide variety of functions, you can use the web interface by connecting the receiver with PC or smartphone through Wi-Fi.

2.2 Parts of the Receiver

The operating controls are all located on the front panel. SIM card slot is on the backside. Serial ports and connectors are located on the bottom of the unit.

2.2.1 Front Panel

The following figure shows a front view of the receiver.

The front panel contains two indicator LEDs and two buttons.

Name	Description
Correction LED (Yellow/Green)	 Indicates whether the receiver is transmitting/receiving differential data. As a Base station: successfully transmitting differential data, flash yellow light. As a Rover station: successfully receiving differential data from Base station will flash yellow light when it is single or float, flash green light when it is fixed.
Satellite LED (Blue)	 Shows the number of satellites that the receiver has tracked. When the receiver is searching satellites, the blue LED flashes once every 5 seconds. When the receiver has tracked N satellites, the blue LED will flash N times every 5 seconds.
Fn button (White)	 Move to next line of the menus or options. Move to next character of the value that you want to make change. Cancel the change you make on a function.

Power button	٠	Works as a Power button:	
(White)	•	Press and hold this button for 3 seconds to turn on or turn	
		off the receiver.	
	•	Works as a Confirmbutton	
	•	Hold Fn button and press this button for 5 times	
		continuously to reset the mainboard.	

2.2.2 Lower Housing

The lower housing contains one SIM card slot, one TNC radio antenna connector, one communication and power port and one USB type C communication and power port.

2.2.3 Receiver Ports

Port	Name	Description
	IO port	 This port is a 7-pin LEMO connector that supports RS-232 communications and external power input. Users can use HCE600 Type-c Cable supplied with the system to realize RS-232 communications between the receiver and computer or controller. Also, users can use a 7-pin cable to transmit differential data to an external radio.
Type-C	USB port	 This port is a type-C USB connector that supports USB communications. Users can use USB Cable supplied with the system to download the logged data to a computer.
	Radio antenna connector	 Connect a radio antenna to internal radio of the receiver. And this connector is not used if you are using an external radio.

2.3 Batteries and Power

2.3.1 Batteries

The receiver has an built-in non-removable Lithium-ion battery.

2.3.2 The Internal Battery

The rechargeable Lithium-ion battery is supplied partially charged.

WARNING – Charge and use the rechargeable Lithium-ion battery only in strict accordance with the instructions. Charging or using the battery in unauthorized equipment can cause an explosion or fire and can result in personal injury and/or equipment damage.

To prevent injury or damage:

- Do not charge or use the battery if it appears to be damaged or leaking.
- Charge the Lithium-ion battery only in a CHC product that is specified to charge it. Be sure to follow all instructions that are provided with the battery charger.
- Discontinue charging a battery that gives off extreme heat or a burning odor.
- •Use the battery only in CHC equipment that is specified to use it.
- •Use the battery only for its intended use and according to the instructions in the product documentation.

2.3.3 Battery Safe

WARNING – Do not damage the rechargeable Lithium-ion battery. A damaged battery can cause an explosion or fire and can result in personal injury and/or property damage.

To prevent injury or damage:

•Do not use or charge the battery if it appears to be damaged. Signs of damage include, but are not limited to discoloration, warping, and leaking battery fluid.

•Do not expose the battery to fire, high temperature, or direct sunlight.

•Do not immerse the battery in water.

• Do not use or store the battery inside a vehicle under hot weather condition.

•Do not drop or puncture the battery.

•Do not open the battery or short-circuit its contacts.

WARNING – Avoid contact with the rechargeable Lithium-ion battery if it appears to be leaking. Battery fluid is corrosive and contact with it can result in personal injury and/or property damage.

To prevent injury or damage:

• If the battery leaks, avoid with the battery fluid.

•If battery fluid gets into your eyes, immediately rinses your eyes with clean water and seek medical attention. Please do not rub your eyes!

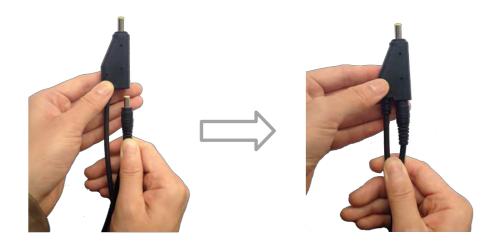

•If battery fluid gets onto your skin or clothing, immediately use clean water to wash off the battery fluid.

2.3.4 External Power Supply

Two methods are available for providing the external power to the receiver by the GPS to PC Data Cable+ Power Adapter, or GPS to PC Data Cable + external power cable (option purchase) + vehicle battery. In

the office:

The Power Adapter is connecting with AC power of 100-240V, the output port of the Power Adapter connects with the Power Port of the GPS to PC DataCable.

In the field:

The external power cable is connecting with a vehicle battery, the output port of the external power cable connects with the Power Port of the GPS to PC Data Cable.

WARNING – Use caution when connecting external power cable's clip leads to a vehicle battery. Do not allow any metal object to connect (short) the battery's positive (+) terminal to either the negative (-) terminal or the metal part of the vehicle battery. This could result in high current, arcing, and high temperatures, exposing the user to possible injury.

2.4 Inserting SIM Card

(a) Open the SIM card slot cover.

(b) Insert the SIM card with the contacts facing upward, as indicated by the SIM card icon next to the SIM card slot.

- (c) Close the cover to prevent water immersion.
- (d) To eject the SIM card, slightly push it in to trigger the spring-loaded release mechanism

Insert the SIM card with the contacts facing upward, as indicated by the SIM card icon next to the SIM card slot.

To eject the SIM card, slightly push it in to trigger the spring-loaded release mechanism.

Tip – The SIM card is provided by your cellular network service provider.

2.6 Connecting to an Office Computer

The receiver can be connected to an office computer for serial data transfer or settings via a HCE600 USB Type-C. Before you connect to the office computer, ensure that the receiver is powered on by internal battery or external power.

The following figure shows how to connect to the computer for serial data transfer or settings:

2.7 Connecting to a Controller

2.7.1 Connecting via Wi-Fi with LandStar 7 Software

Turn on the controller \rightarrow run LandStar 7 \rightarrow go to **Config** main menu \rightarrow tap **Connect**.

In the *Connect* screen, select **CHC** for the *Manufacture* field, **i93** for *Device Type* field, **WIFI** for *Connection Type* field.

Tap the Wireless Lan icon on the right side to select the hot spot \rightarrow Switch on the WiFi module by the top switch \rightarrow select the target device in the list.

Tap Connect to link to the hot spot. If the first-time connection to this hot spot, user may type

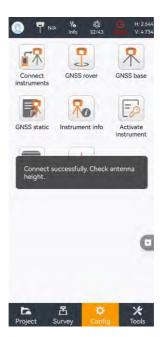

in the password.

Tip – The Wi-Fi key of the receiver is 12345678 by default.

Tap the **Connect** button to build the connection.

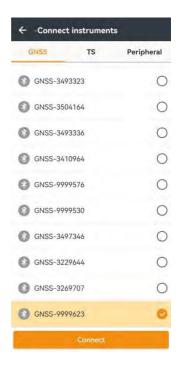

2.7.2 Connecting via Bluetooth with LandStar 7 Software

Turn on the controller \rightarrow run LandStar 7 \rightarrow go to **Config** main menu \rightarrow tap **Connect**.

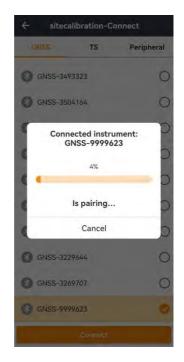

In the *Connect* screen, select **CHC** for the *Manufacture* field, **i93** for *Device Type* field, **Bluetooth** for *Connection Type* field.

Tap the **Bluetooth Manager** and turn on the **Bluetooth** function to search Bluetooth device around \rightarrow select the target device in the list \rightarrow Tap back button \rightarrow select the target device in the Bluetooth manager list.

Tap the **Connect** button to build the connection.

2.8 Downloading Logged Data

Data logging involves the collection of GNSS measurement data over a period at a static point or points, and subsequent post-processing of the information to accurately compute baseline information. Data logging using receivers requires access to suitable GNSS post-processing software such as the CHC Geomatics Office (CGO) Software.

2.8.1 FTP Download

The procedures of downloading logged data through FTP are as follows:

(1) Switch on the receiver, search its Wi-Fi in the computer and connect.

(2) After the successful connection, open the file manager in the computer and input "ftp:\\192.168.1.1" in the address box.

213	= = 192.168.1.1	
File	Home Share View	
\leftarrow -	↑ P → The Internet > 192.168.1.1	4

(3) Input user name and password, the default user name and password are "ftp".

Log On	As	×	
1	Either the server	does not allow anonymous logins or the e-mail address was not accepte	
	FTP server:	192.168.1.1	
	<u>U</u> ser name:	ftp ~	
	Password:	•••	
	After you log on, you can add this server to your Favorites and return to it easily.		
⚠		crypt or encode passwords or data before sending them to the ect the security of your passwords and data, use WebDAV instead.	
	Log on <u>a</u> non	ymously Save password	
		Log On Cancel	

(4) Double click the folder "repo_receiver SN" (take 3411955 as example), you will see 9 folders. The "push_log" folder is used to save the log files, and the other 8 folders represent different logging sessions and are used for store static data.

(5) Double click the folder that you have configured to store the static data, you will see the folder(s) created by the i93 system automatically and named by the date which is decide by GPS time when you start to log data.

(6) Select the destination folder and double click it, two folders named as different data format (hcn and rinex) will be displayed.

(7) Select the data format that you configured to save the static data, you will find the static raw data.

Notes: For hcn files, the name of the file is represented as XXXXXDDDNN, where XXXXXX is the SN of the receiver, DDD is day of year, and NN is the recording session.

WARNING – The static data will be saved in the first logging session, the "record_1" folder, by default. Old files will be deleted if the storage space is full. If you configure not to auto delete old files when the memory is low, the receiver will stop datalogging.

2.8.2 Web Server Download

The procedures of downloading logged data through web server refer to <u>5.4.4 Data</u> <u>Download Submenu.</u>

2.8.3 USB Download

The procedures of downloading logged data in the receiver are as follows:

(1) Switch on the receiver and connect it with a computer by HCE600 Type-C. After the successful connection, a removable disk named as the Serial Number (SN) of the receiver will appear on the computer.

(2) Double click the removable disk and you will see the folder named as "repo".

(3) Double click this folder, you will see 9 folders. The "push_log" folder is used to save the log files, and the other 8 folders represent different logging session and are used for store static data.

(4) Double click the folder that you have configured to store the static data, you will see the folder(s) created by the i93 system automatically and named by the date which is decide by GPS time when you start to log data.

(5) Select the destination folder and double click it, and then two folders named as different data format (hcn and rinex) will be displayed.

(6) Select the data format that you have configured to save the static data, you will find the static raw data.

3225804227C.HCN

Tip – For hcn files, the name of the file is represented as XXXXXDDDNN, where XXXXXX is the SN of the receiver, DDD is day of year, and NN is the recording session.

WARNING – The static data will be saved in the first logging session, the "record_1" folder, by default. Old files will be deleted if the storage space is full. If you configure not to auto delete old files when the memory is low, the receiver will stop datalogging.

The front panel contains one LCD screen, two indicator LEDs, and two buttons. The operating controls are all located on the front panel.

3.1 Main Operation Menus

The top-level menu of the front panel includes 6 parts: Info, SV, Mode, Power, Data and Set. Info is the basic information of firmware such as SN, PN and etc. SV is the display of satellite situation. Mode is the important part which illustrate the work mode and users can select the mode according to their needs. Power shows the electric quantity of two batteries. Data is used to set static mode and Set is to set the device according to personal habits including language, brightness, etc.

The details of main operation are as follows and they are concluded two tables. The first table includes 5 parts: Info, SV, Power, Data and Set and the second table displays details of Data.

Top-level Menu		
Info	SN 3411956 PN A11611980901070507 -015701 -020104 Version 2.0.7 Register 2030/12/31 Static off Sample 5S Format HCN Diff Age 0.0S Network No Sim Card IMEI 861529049455435	Describe the main information of this machine. SN displays the Serial Number of the receiver. PN displays the Part Number of the receiver. Version displays the firmware version. Register displays the expiry date of registration code. Static displays if the static is on or not. Format displays the data type. Network displays the if a sim card inserts the RTK. IMEI is International Mobile Equipment Identity which is used to identify the RTK.
SV	Total: 30/30 GPS: 10/10 BDS: 10/10 GLO: 4/6 GAL: 4/4	Indicate the total number of satellites that have been tracked and the number of satellites tracked of each constellation, where BDS represents BeiDou, GLO represents GLONASS, and GAL represents Galileo.

4 Equipment Setup and Operation

4.1 Post-processing Base Station Setup

For good performance, the following base station setup guidelines are recommended:

Components:

No.	Name
а	i93 GNSS receiver
b	Extension pole (30 cm)
с	Tribrach adaptor
d	Tribrach w/ Opti
е	Aluminum tripod

Steps:

- (1) Put tripod in the target position, center and level it roughly.
- (2) Place and lock the tribrach in the tripod.

- (3) Screw the receiver onto the tribrach.
- (4) Center and level the receiver more precisely.
- (5) Connect the receiver to external battery by using external power cable if necessary.
- (6) Connect the receiver to external storage disk by using USB cable if necessary.
- (7) Turn on the receiver by pressing the power button for 3 s.
- (8) Measure the antenna height by using H.I. tape and auxiliary H.I. tool.
- (9) Press the function button to select Data to start recording static raw.

If work with a data controller:

- (10) Switch on the data controller and connect it to the receiver.
- (11) Use software to configure the receiver as static mode.

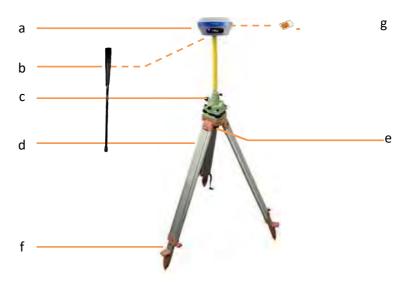

4.2 Real-Time Base Station Setup

4.2.1 Internal Cellular or UHF

For good rover operation, the following base station setup guidelines are recommended:

Components:

No.	Name				
а	i93 GNSS receiver				
b	UHF whip antenna				
С	Extension pole (30 cm)				
d	Tribrach adaptor				
е	Tribrach w/ Opti				
f	Aluminum tripod				
g	Micro SIM card (12 mm x 15 mm)				

Steps:

- (1) Put tripod in the target position, center and level it roughly.
- (2) Place and lock the tribrach in the tripod.

If work as a cellular base station, the SIM card need to be inserted

- (3) Screw the receiver onto the tribrach.
- (4) Center and level the receiver more precisely.

If work as a UHF base station, the UHF whip antenna need to be connected to the receiver.

- (5) Connect the receiver to external battery by using external power cable if necessary.
- (6) Connect the receiver to external storage disk by using USB cable if necessary.
- (7) Turn on the receiver by pressing the power button for 3 s.
- (8) Measure the antenna height by using H.I. tape and auxiliary H.I. tool.
- (9) Switch on the data controller and connect it to the receiver.
- (10) Use software to configure the receiver as cellular base or UHF base mode.

4.2.2 External UHF

For good performance, the following base station setup guidelines are recommended:

Equipment Setup and Operation

Components:

No.	Name					
а	i93 GNSS receiver					
b	Extension pole (30 cm)					
с	Tribrach adaptor					
d	Tribrach w/ Opti					
е	GPS to datalink cable (power cable)					
f	Aluminum tripod					
h	Whip antenna					
i	3 m cable for datalink antenna 3m					
j	Pole mounting					
k	External 410-470 datalink					

Steps:

- (1) Put tripod in the target position, center and level it roughly.
- (2) Place and lock the tribrach in the tripod.
- (3) Screw the receiver onto the tribrach.
- (4) Center and level the receiver more precisely.
- (5) Connect the receiver to external datalink by using GPS to datalink cable.
- (6) Hang the external datalink on the tripod leg.
- (7) Connect the receiver to external battery by using external power cable if necessary.
- (8) Connect the receiver to external storage disk by using USB cable if necessary.
- (9) Turn on the receiver by pressing the power button for 3 s.
- (10) Measure the antenna height by using H.I. tape and auxiliary H.I. tool.
- (11)Turn on the external datalink and configure it as need.

If work with a data controller:

(12)Switch on the data controller and connect it to the receiver.

(13) Use software to configure the receiver as cellular base or UHF base mode.

4.3 Real-Time Rover Station Setup

For good performance, the following rover station setup guidelines are recommended:

Components:

No.	Name			
а	i93 GNSS receiver			
b	whip antenna			
с	2M range pole w/bag			
d	Micro SIM card (12 mm x 15 mm)			

Steps:

(1) Keep the receiver fully charged.

If work as a cellular rover station, the SIM card need to be inserted before the batteries.

(2) Screw the receiver onto the pole.

If work as a UHF rover station, the UHF whip antenna need to be connected to the receiver.

- (3) Turn on the receiver by pressing the power button for 3 s.
- (4) Switch on the data controller and connect it to the receiver.
- (5) Use software to configure the receiver as cellular rover or UHF rover mode.
- (6) Center and level the receiver more precisely.
- (7) Use software to start survey.

Equipment Setup and Operation

4.4 Working with the Tilt Compensation

CAD

¥

۲

 \triangleleft

Ξ

0

i

ø

4.4.1 Operation Steps

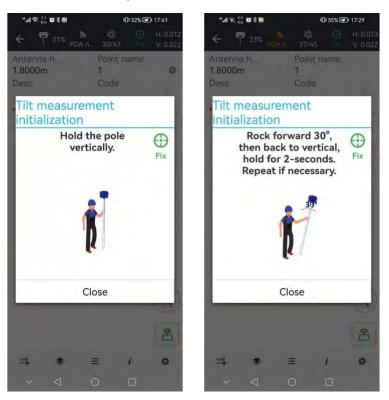

(1) Open Landstar8-> Tap PT Survey-> Tap (to activate tilt measurement.

(2) Hold the pole vertical for a while and shake according to the procedures in the interface to do initialization.

(3) This icon 🕙 will appear when the initialization is successful.

(4) Enter the Name and Antenna, then tap $\underline{\mathbb{A}}$, point will be collected and store to Points automatically.

(5) When this icon *C* appears, the text will show "Tilt is not available, please measure in alignment" at the bottom of interface.

÷ 1	21% PD		₿3 ⊕ 741 Fix	H: 0.012 V: 0.022
Antenna 1.8000r		1	nt name	0
Desc		Co	de	5
*Tilt mea IMU.	surement	is not av	ailable, re	initialize
Local N	I/E/Elev			2
Local I Local E Elev	-		60.5299r 9.3709m 56m	
PDOP(age(10s) 4.000) istance	1.000s 0.901 0.0048		
Tilt Directi	on of tilt):00.0000):00.0000	
				٩
				ß
GAD	۲	=	i	ø
	1	0	-	

(6) Tap 🕙 to close tilt compensation.

4.4.2 Notes of using tilt measurement

1. At the beginning of initialization, the pole height of the instrument should be the same as that antenna height in the software.

2. In the process of tilt measurement, if the controller shows that "Tilt is not available, please measure in alignment" (red), please shake RTK slightly from left to right or back to front until the reminder disappears.

3. The controller will prompt "Tilt is not available, please measure in alignment" when the receiver is stationary over 30 seconds or the pole hit the ground toughly.

4. The pole cannot be shaken when point is collected.

Equipment Setup and Operation

5. Initialization is required:

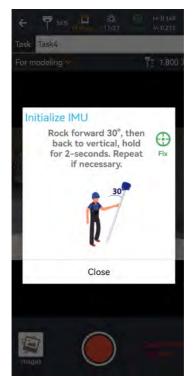

- when the RTK is turned on every time;
- when IMU module is turned on every time;
- when receiver drops at working;
- when the pole is tilted more than 65 degree;
- when the receiver is stationary more than 10 minutes;
- when the RTK rotates too fast on the matching pole (2 rounds per second);
- when the pole hit the ground toughly.

4.5 Visual Survey

4.5.1 Survey point mode

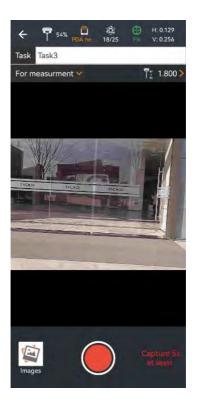

The survey point mode means that by taking video survey of the target to be surveyed and solving the survey result in real time, and selecting the point to be surveyed on the photo than you can get the coordinate value of the point.

(1) Finish the IMU initialization, enter the visual survey, do as it prompts;

(2) Choose the For measurement mode;

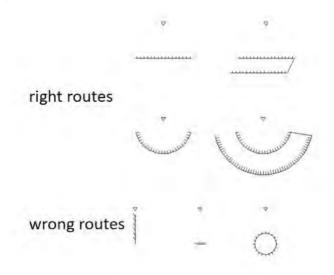

(3) Create a new task, and aim at which point you want to survey, click the button to record the video;

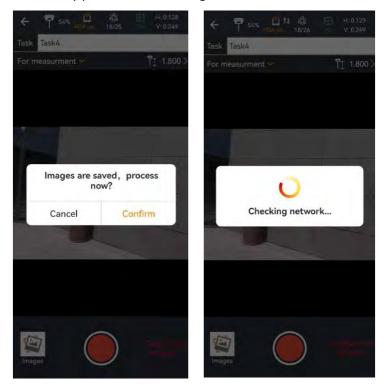

Note:Keeping constant speed when shooting, the length of the video must not be less than 5 seconds, the route of walking can refer to the following picture, walking in a straight line or around the shooting.

CHCNAV i93 GNSS USER GUIDE | 2023-02

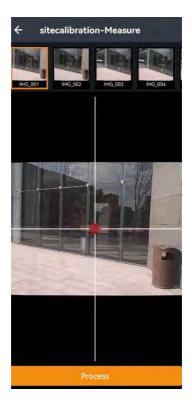

(4) Click the icon of End Recording to finish recording and confirm the solved data, and the software will automatically perform data solving;

(5) Select the photo which the point to be surveyed is located, capture the corresponding point location, click [Select], and the latitude, longitude and plane coordinates of the point will be displayed below.

Equipment Setup and Operation

Note: The 2D quality represents the resolution accuracy of the surveyed point. Capturing the same point position on multiple photos will improve the accuracy of the surveyed point, and the 2D value of the point decreases gradually.

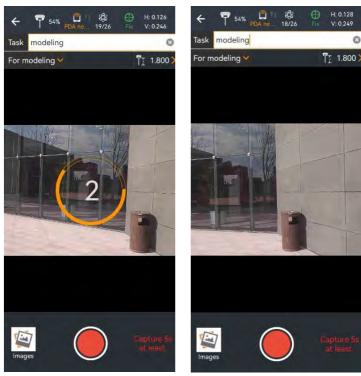

(6) Click [Save] and enter the point name to save the surveyed points in the point management. After saving successfully, you can click on the point library and go to the point management to view the coordinates you just saved. If additional points are needed, you can continue to select points for solving and saving data.

4.5.2 Modeling mode

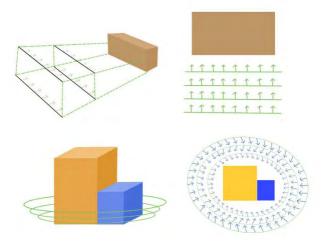

Modeling mode means that video surveys can be taken from multiple angles, distances and heights of the target to be surveyed, and then the observed image data can be exported and later imported into the modeling software for modeling.

- (1) The same operation with the point mode, finish the IMU initialization;
- (2) Choose the Modeling mode;

Equipment Setup and Operation

(3) Create a new task, and aim at which building you want to model, click the button to record the video;

Note: When filming, keep a constant speed, the length of the video should not be less than 5 seconds, the route of travel can refer to the example, it is recommended that from different heights, different angles, different distances to survey the target for multi-sided shooting. If the target to be surveyed is single-sided, it is recommended to use straight shooting; if the target to be surveyed is a panorama of building, it is recommended to shoot around, and the camera is recommended to have a certain angle (30°-45°) with the target to be surveyed when shooting. The schematic diagram is as follows.

(4) Click the end icon to finish recording and make sure that the data has been saved to exit CHCNAV i93 GNSS USER GUIDE | 2023-02 P a g e | 51

Equipment Setup and Operation

5 Configuring Through a Web Browser

Supported browsers:

- Google Chrome
- Microsoft Internet Explorer[®] version 10, or higher

To connect to the receiver through a web browser:

- 1. Turn on the Wi-Fi of the receiver.
- 2. Search the wireless network named as GNSS-XXXXXXX (the SN of your receiver) on your computer, and then establish the connection.
- 3. After the successful connection between your computer and the receiver, enter the IP address (192.168.1.1) of the receiver into the address bar of the web browser on your computer:

4. The web browser prompts you to enter a login account and password:

The default login account for the receiver is:

- ➤ Login Account: admin
- Password: password

Note – Tick **remember me** option, and then the browser will remember the Login Account and Password you entered.

5. Once you log in, the web page appears as follows:

CHCNA	V			SN:34	11955 English 🏏 Qi

5.1.2 Activity Submenu

Lists several important items to help you understand how the receiver is being used and its current operating condition. Items include the identities of currently tracked satellites, internal and external storage usage rate, how long the receiver has been operational, state of the internal battery, power source state, files being logged, and data streams being output. With this information, it is easy to tell exactly what functions the receiver is performing

c) **Manual Base:** The receiver will serve neither as a base nor a rover after this mode is enabled. Users need to configure the receiver manually

Reference Station Mode:	Manual Base	*			
Base Station Name:	9999885		1		
Base Station ID:	9999885		Ĩ		
Reference Latitude:	0 0	0.00000000	ONOS		
Reference Longitude:	0 0	0.00000000	· OE OW		
Reference Height:	0.0000		Ĩ		
	S	ent Position	Save		
Sample for Average					
Sample for Average Positioning Constraint:		ution Coordinates		linates	
				linates	

For **Reference Latitude** and **Reference Longitude**:

There are mainly three methods to enter the reference coordinates and shown as follows:

- a) **Acquire Current Position**: Click this button to acquire current position obtained through autonomous positioning automatically.
- b) Manual Input: Manually input the coordinate of a control point.
- c) **From CORS**: After the receiver logging in CORS, the software can record the coordinate of current position based on fix solution.

For Sample for Average:

Users can determine the positioning limit and sampling amount. The positioning limit falls into two types:

- a) **Single Solution Coordinates**: Collect the coordinates of receiver obtained through autonomous positioning.
- b) **Fixed Solution Coordinates**: Only collect coordinates of receiver with a fixed solution.

After the configuration of positioning limit and sampling amount, click \bigcirc start to carry out sampling and averaging \rightarrow the progress bar will show the progress \rightarrow the result will be served as the coordinate of current position.

If users need to save the changes, please tap 🛄 Save button.

5.3.7 HCPPP Settings

HCPPP Settings ×		
HCPPP Range:	5min	✓ □ Save

5.4 Data Recording Menu

Use the Data Logging menu to set up the receiver to log static GNSS data and to view the logging settings. You can configure settings such as observable rate, recording rate, continuous logging limit, and whether to auto delete old files when memory is low. This menu also provides the controls for the FTP push feature:

5.4.1 Log Settings Submenu

Here shows the data logging status, including internal and external storage usage and data logging status of each session. Also, users can configure the data logging settings for each session, including recording name, store location, storage limit, store formats, start time, etc

Store Info								
	Position		Total Storage				Storage Av	ailable
1 Int	ernal Storage		7595MB				7227M	IB
2 54			OMB					
6GB. It will stop re	ernal Storage cording when the s	torage is full.	OMB				OMB	
GB. It will stop re		torage is full.	OMB.				OMB	
GB. It will stop re		torage is full.	UMB				OMB	Clear A
		torage is full. Activated	Log Status	Setting Parameter		Swite		

Equipment Setup and Operation

To edit the settings of each session, click the **Modify** button to the right of the required session, and then the *Recording Edit* screen appears:

Recording Edit					×
Auto Record: Sample Interval:	OYes ● No 5s	~	Antenna Height: Measure Way:	0.0000 Antenna Phase]
Elevation Mask:	10	(°)	Storage Format:	HCN 🗸	
Duration Time:	1440 (Minute)		RINEX Version:	OFF v	
Site Name:	3411955		,		
		Save	⊗ Back		

Click advanced to see more settings.

Recording Edit				×
Auto Record: Sample Interval: Elevation Mask: Duration Time: Site Name:	10 (°) 1440 (Minute)	Storage Format: RINEX Version:	Antenna Phase	
Apply Time: Integral Point Store: Circulating Memory:	Yes No	Store Location: Assigned Storage: Observer: Observe Agency:	CHC	
Repeat Observations:	ingle observation.Turn off to	FTP Push:	Close 1:ftp server 1 2:ftp server 2 3:ftp server 3	
	Save	⊗ Back		

In this screen, you can configure all the data logging parameters, and determine whether the recording files will be affected by the FTP Push. The parameters are mainly as follows:

> Auto Record: on or off.

- > **Sample Interval**: Select the observable rate from the dropdown list.
- > Elevation Mask: Enter the elevation mask.
- > **Duration Time**: Set the duration of data logging.
- Site Name: Enter the name of the site.
- > Antenna Height: the measured height value.
- > Measure way: Antenna Phase Center, Vertical Height, Slant Height
- **Storage Format**: Select the format of the data store.
- RINEX Version: OFF, 3.02, 2.11
- > Start Date: Select Yes or No option to determine whether to auto record start date.
- Apply Time: Select Yes or No option to determine whether to auto record apply time.
- Integral Point Store: Select Yes or No option to determine whether to allow receiver to save data every hour.
- Circulating Memory: Select Yes or No option to determine whether to auto delete old files if the storage space is full.
- Repeat Observations: Select Yes or No option to determine whether to turn on to record a single observation.
- **Store Location:** Internal Storage, External Storage.
- Assigned Storage: The assigned memory size of current thread(for example, Record
 1) is 10000MB
- > **Observer:** Enter the name of observer.
- > **Observer Agency:** Enter the name of observer agency.
- **FTP Push**: Decide whether to push the stored files to the FTP server of your choice.

TapSavebutton to save the settings and back to the Log Settings screen.Also, users can clickBackto abandon the changed settings and back toLog Settings screen.

Note – To modify data logging parameters, make sure the data logging sessio n is switched off.

To switch on or off **ANY** data logging session, tap the **ON** or **OFF** button on the right of the required session.

To delete the recorded files of **ANY** data logging session, tap the **Clear** button on the right of the required session.

To delete the recorded files of **ALL** data logging sessions, tap the **Clear ALL Accounts** button.

5.4.2 FTP Push Settings Submenu

Use this screen to configure the receiver to push stored files to the FTP server of your choice. Only files that are configured to use FTP push are transmitted.

Equipment Setup and Operation

Record Info				
Server ID	Server IP	Remote Directory	Server Description	Modify
1	192.168.3.72	/repo/first	ftp server 1	Modify
2	192.168.3.72	/repo/second	ftp server 2	Modify

Tap **Modify** button on the right of the required FTP server and the *FTP Push Settings* screen appears:

Server IP:	192.168.3.72
Port:	21
Remote Directory:	/repo/first
Local directory:	/mnt/repo_3225804 ~
Server Description:	ftp server 1
User Name:	ftpuser1
Password:	

5.4.3 FTP Push Log Submenu

Shows the related information about the recorded filed that be pushed. And users can tap **Clear Ftp Send Log** button in the upper right corner to clear the log of FTP Push operations.

5.4.4 Data Download Submenu

In this submenu, users can download the data files that recorded in the internal storage through the internal FTP site.

1. Click this submenu, and then the log on dialogue box will prompt you to enter a user name and password:

Sign in	
ftp://192.168	
Your connect	tion to this site is not private
Username	
Password	
	Sign in Cancel

The default logon account for the internal FTP site is:

- ➤ User name: ftp
- Password: ftp
- 2. Click the directory named as "repo" to view and download the files currently stored on the receiver:

To find the file need to be downloaded, click the name of data logging session → the date of file that be recorded → the format of the file → the name of the target file.

CHCNAV i93 GNSS USER GUIDE | 2023-02

Index of /repo_3225804/				
1 [parent directory]				
Name Size	Date Modified			
push_log/	7/16/19, 1:17:00 PM			
record_1/	8/15/19, 10:22:00 AM			
record_2/	7/16/19, 1:17:00 PM			
record_3/	7/16/19, 1:17:00 PM			
record_4/	7/16/19, 1:17:00 PM			
record 5/	7/16/19, 1:17:00 PM

	ave
)

5.7.4 Radio Settings Submenu

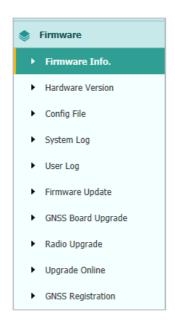

Radio Settings ×		
Radio Status: Ol	F C'ON	OFF
Auto Start: 🤇) Yes 💿 No	
Radio Protocol:	CHC	~
Channel Bandwidth :	25	✓ (kHz)
OTA Baud Rate:	9600	~
Radio Power:	1W	~
Radio Frequency:	9 • 462.5500 470MHz)	(410MHz
	Save	

Use this submenu to turn on/off radio function and configure radio parameters.

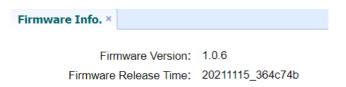

5.8 Firmware Menu

Use this menu to check the current firmware information, download the system log, update the receiver firmware, download or update the configuration file and register the receiver, and more:

5.8.1 Firmware Info Submenu

Use this submenu to check the current firmware information. The following figure shows an example of the firmware information.

5.8.2 Hardware Version Submenu

Use this submenu to check the hardware information, including main board version and core board version:

Hardware Version ×	
Main Board:	1.0.1
Core Board:	1.0.1
PN:	A19318430901060002
Board Firmware Version Number:	21893

5.8.3 Config File Submenu

Use this submenu to update Configuration File.

Config File ×	
Download Configuration File :	と Download
Update Configuration File:	Browse
	🛄 Confirm

5.8.4 System Log Download Submenu

Use this submenu to download the system log of the receiver.

System Log ×	
System Log Type	e: Firmware Log 🗸 🗸
	坐 Download

5.8.5 User Log Submenu

Use this submenu to download the user log. Tap **Download** to download current user log; Tick items that you want to see on the user log and tap confirm button to confirm selected user log.

Equipment Setup and Operation

Downlo	bad User Log: 살 Download			
User	Log settings			
1	System Starting Time	1	Wi-Fi Status	
1	External Power Removed	-	Bluetooth status	
1	Satellites Tracking Status Changed	-	CORS and APIS states	
-	TCP Client Connection	-	3g Connection status	
-	TCP Client Disconnect			
-	Observation Recording Start and End			
1	FTP file pushed			
1	Email alert time			

5.8.6 Firmware Update Submenu

Use this submenu to load new firmware to the receiver across the network. Tap the **Browse** button to locate the upgrade file \rightarrow tap **Confirm** button to confirm the selected upgrading file and start upgrading.

Firmware Update ×		
	Upgrade File:	Browse
		Confirm

Notes

- It may take about 3 or 4 minutes to complete the firmware upgrading. Do not touch the power button or unplug the power until the upgrading process finishes, or damage will be caused to the receiver.
- The receiver will restart after the firmware upgrading is done, so users need to reconnect the receiver with your computer v ia Wi -Fi, and then log-in the receiver through a web browser to continue the configuration.

5.8.7 GNSS Board Upgrade Submenu

Use this submenu to upgrade GNSS Board. Use this submenu to load new board to the receiver across the network. Tap the **Browse** button to locate the upgrade file \rightarrow tap **Confirm** button to confirm the selected upgrading file and startupgrading.

GNSS Board Upgrade ×	
Upgrade File:	Browse
	Confirm

5.8.8 Radio Upgrade Submenu

Use this submenu to browse upgrade file and upgrade radio. Use this submenu to load new radio to the receiver across the network. Tap the **Browse** button to locate the upgrade file \rightarrow tap **Confirm** button to confirm the selected upgrading file and start upgrading.

Radio Upgrade ×		
	Upgrade File:	Browse
	l	🖳 Confirm

5.8.9 Upgrade Online Submenu

Use this submenu to input Server Address and upgrade online.

Server Address:	http://cloud.huacena	av.com:6001 (http://cloud.huacenav	.com:6001)		
	🛄 Save				
				×	Get File

5.8.10 GNSS Registration Submenu

Use this submenu to register the receiver. Paste or enter the registration code to the *Registration Code* field \rightarrow tap **Registration** button to complete the registration.

GNSS Registration ×	
Serial Number:	3411955
Registration Limit:	2022-4-24
Registration Code:	XpHTmdQ4mSo
	P Registration

5.9 Cloud Service Setting Menu

5.9.1 Cloud Service Setting Submenu

Use this submenu to turn on or turn off Cloud Service, Auto Start, Remote Control and configure other settings.

	Connecting SON OFF
Auto Start	
Remote Control	• On O Off

Make your work more efficient

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.

• Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

• Consult the dealer or an experienced radio/TV technician for help.

Caution: Any changes or modifications to this device not explicitly approved by manufacturer could void your authority to operate this equipment.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

The device has been evaluated to meet general RF exposure requirement. This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 50cm between the radiator & your body.
