1. General Description of EUT

The RKE transmitter transmits 315MHz an FSK modulated data signal to the SRx. The RF system of SRx receives this encrypted RF signal. The SRx send the signal to corresponding the host Body control module through single wired K-line bus then the host module broadcasts the requested remote commands to the appropriate control modules in the vehicle through CAN communication line. In general the following functions are provided:

- Lock the car
- Unlock the car
- Unlock the trunk of the car
- Panic

4. Test Procedure

The test procedures are performed following the test stands ANSI C.63.4-2000, if applicable.

4.1 Conducted Emission

Testing was performed according to ANSI C.63.4-2000 in a shielded room with peripherals placed on a table, 0.8 m high over a metal floor.

It was located more than required distance away from the shield room wall.

4.2 Radiated Emission

Testing was performed according to ANSI C.63.4-2000 at open field test site. The EUT was placed in a 0.8 m high table along with the peripherals.

The turn table was separated from the antenna distance 3 meters. Cables were placed in a position to produce maximum emissions as determined by experimentation and operation mode was selected for maximum.

The frequencies and amplitudes of maximum emission were measured at vary azimuths, antenna heights and antenna polarities.

Reported are maximized emission levels.

5. Test Condition

5.1 Test Configuration

The device was configured for testing in a typical fashion (as a customer would normally use it). During the tests, the EUT and the supported equipments were installed to meet FCC requirement and operated in a manner, which tends to maximize its emission level in a typical application.

Conducted Emission Test

It needs not to test requirement, because the EUT is supplied from a DC battery.

Radiated Emission Test

Preliminary radiated emission tests were conducted using the procedure in ANSI C63.4-2000 clause 8.3.1.1. to determine the worst operating condition. Final radiated emission tests were measured at 3 meter open field test site. To complete the test configuration required by the FCC, the EUT was tested in all three orthogonal planes.

5.2 EUT Operation

EUT was tested according to the following operation modes provided by the specifications given by the manufacturer, and reported the worst emissions.

5.3 Peripherals / Support Equipment Used

Following peripheral devices and interface cables were connected during the measurement.

Type of Peripheral Equipment Used:

6. Field Strength of the Carrier FCC Part 15, Subpart C, Section15.231(b)

The following table shows the highest levels of radiated emissions on both polarizations of horizontal and vertical.

Humidity Level : 45%

Temperature: 23
