#### **10.2 TEST METHOD**

TIA/EIA-603 2.2.19.3

 $<sup>^{1}</sup>$ t  $_{on}$  is the instant when a 1 kHz test signal is completely suppressed, including any capture time due to phasing.  $t_{1}$  is the time period immediately following  $t_{on}$ .  $t_{2}$  is the time period immediately following  $t_{1}$ .  $t_{3}$  is the time period from the instant when the transmitter is turned off until  $t_{off}$ .  $t_{off}$  is the instant when the 1 kHz test signal starts to rise.

2 During the time from the end of  $t_{2}$  to the beginning of  $t_{3}$ , the frequency difference must not exceed the limits specified in  $t_{3}$ .

Difference between the actual transmitter frequency and the assigned transmitter frequency.
 If the transmitter carrier output power rating is 6 watts or less, the frequency difference during this time period may exceed the maximum frequency difference for this time period.

Page 103 of 115

#### 10.3 DESCRIBE LIMIT LINE OF RANSMITTER FREQUENCY BEHAVIOR

**ton:** The switch-on instant ton of a transmitter is defined by the condition when the output power, measured at the antenna terminal, exceeds 0,1 % of the full output power (-30 dBc).

t1: period of time starting at ton and finishing according to above 11.1

t2: period of time starting at the end of t1 and finishing according to above 11.1

toff: switch-off instant defined by the condition when the output power falls below 0,1 % of the full output power (-30 dBc).

t3: period of time that finishing at toff and starting according to above 11.1

Report No.: AGC00589170705FE10 Page 104 of 115

#### **10.4 MEASURE RESULT**

#### FM:

Transmitter Frequency Behavior @ 12.5 KHz Channel Separation--Off to On-10W

Transmitter Frequency Behavior @ 12.5 KHz Channel Separation--On to Off-10W

Report No.: AGC00589170705FE10 Page 105 of 115

Transmitter Frequency Behavior @ 12.5 KHz Channel Separation--Off to On

Transmitter Frequency Behavior @ 12.5 KHz Channel Separation--On to Off

Page 106 of 115

#### 11. AUDIO LOW PASS FILTER RESPONSE

#### **11.1 LIMITS**

**2.1047(a):** Voice modulated communication equipment. A curve or equivalent data showing the frequency response of the audio modulating circuit over a range of 100 to 5000 Hz shall be submitted. For equipment required to have an audio low-pass filter, a curve showing the frequency response of the filter or of all circuitry installed between the modulation limiter and the modulated stage shall be submitted.

90.242(b)(8): Recommended audio filter attenuation characteristics are given below:

| Audio band  | Minimum Attenuation Rel. to 1 KHz Attenuation   |  |
|-------------|---|--|
| 3 –20 KHz   | 60 log <sub>10</sub> (f/3) dB where f is in KHz |  |
| 20 – 30 KHz | 50dB  |  |

#### 11.2. METHOD OF MEASUREMENTS

The rated audio input signal was applied to the input of the audio low-pass filter (or of all modulation stages) using an audio oscillator, this input signal level and its corresponding output signal were then measured and recorded using the FFT Digital Spectrum Analyzer. Tests were repeated at different audio signal frequencies from 0 to 50 KHz.

Report No.: AGC00589170705FE10 Page 107 of 115

#### 11.3 TEST DATA

# 12.5KHZ CHANNEL SPACING, 4FSK FREQUENCY OF ALL MODULATION STATES (TEST RESULT FOR VHF)-10W

| Frequency | Audio In | Audio out | Attenuation | Attenuation  | Recommended Attenuation |  |
|-----------|----------|-----------|-------------|--------------|-------------------------|--|
| (KHz)     | (dBV)    | (dBV)     | (Out_In)    | Rel.to 3 KHz | (dB)                    |  |
|           |          |           | dB          | (dB)         |                         |  |
| 0.1       | -76.15   | -31.53    | 45.52       | -36.15       |                         |  |
| 0.2       | -76.15   | -17.49    | 58.48       | -25.85       |                         |  |

Report No.: AGC00589170705FE10 Page 108 of 115

**Note**: Due to the difficulty of measuring the Frequency Response of the internal low-pass filter, the Frequency Response of All Modulation States is performed to show the roll-off at 3 KHz in comparison with the recommended audio filter attenuation.
