SAR report for 5000B6

Dear Sir/Madam,

All RF devices keep the same port/layout/circuitry/antenna/housing between 5000B6 & 5000B8 models. Both models have the same housing footprint and all RF devices/antenna keeps the same location within the handheld housing.

For the certification purpose we have chosen the most representative & complex combination which is the 5000B8 with GPRS/WIFI/BT/RFID modules. 5000B6 is just a depopulated version of the test model. The 5000B6 model doesn't have the WIFI/BT module.

It's our engineering judgement that 5000B6 model complies to RF exposure requirements by using 5000B8 model SAR report because the only difference is that WIFI/BT module options is not part of 5000B6 model.

Regards,

A handwritten signature in black ink, appearing to read 'Pierre Olivier', is written over a horizontal line.
