Dates of Tests: June 14~23, 2011
 Test Report S/N: LR500111106J
 Test Site : LTA CO., LTD.

FCC ID

T7MSTR250R01C

APPLICANT

Kisan Telecom Co., Ltd.

TEST REPORT

FCC Part 22(H)/Part 24(E) Certification

Classification : PCS Licensed Transmitter
Manufacturing Description : Dual Optical DAS Repeater
Manufacturer : Kisan Telecom Co., Ltd.
Model name : STR250R01C
Test Device Serial No.: : Identification
FCC Rule Part(s) : §22(H), §24(E), §2
Downlink : 869~894MHz (CDMA 850)
 : 1930~1990MHz (PCS 1900)
Uplink : 824~849MHz (CDMA 850)
 : 1850~1910MHz (PCS 1900)
Rated RF Output Power : 27dBm (Uplink) / 40dBm (Downlink)
Type Modulation : CDMA / PCS CDMA
Emission Designators: : F9W
Data of issue : June 24, 2011

This test report is issued under the authority of:

The test was supervised by:

Hyun-Chae You, Manager

Il-Shin kim, Test Engineer

This test result only responds to the tested sample. It is not allowed to copy this report even partly without the allowance of the test laboratory. The report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the Federal Government.

1. General information's

1-1 Test Performed

Company name : LTA Co., Ltd.
 Address : 243, Jubug-ri, Yangji-Myeon, Youngin-Si, Kyunggi-Do, Korea. 449-822
 Web site : <http://www.ltalab.com>
 E-mail : chahn@ltalab.com
 Telephone : +82-31-323-6008
 Facsimile : +82-31-323-6010

Quality control in the testing laboratory is implemented as per ISO/IEC 17025 which is the “General requirements for the competents of calibration and testing laboratory”.

1-2 Accredited agencies

LTA Co., Ltd. is approved to perform EMC testing by the following agencies:

Agency	Country	Accreditation No.	Validity	Reference
NVLAP	U.S.A	200723-0	2011-09-30	ECT accredited Lab.

2.5 Mode of Operation

The EUT was powered by 120VAC. The EUT was configured for maximum gain, 95dB. Repeater simulators were used to provide the input signals to the EUT. Tests were performed with CDMA modulations. The input power was the maximum declared by the manufacturer.

3. Test Report

3.1 Summary of tests

Parameter	Status
Transmitter Requirements	
RF Power Output	C
Occupied Bandwidth, Input/Output Comparison	C
Out-of-Band Emissions at antenna terminal	C
Intermodulation Test	C
Transmitter Spurious Radiation	C
Out of Band Rejection	C
Frequency Stability	C

Note 1: C=Complies NC=Not Complies NT=Not Tested NA=Not Applicable

Note 2: The data in this test report are to be tested to the ANSI/TIA-603-C-2004 standard

3.2 Results Of Tests

3.2.1 RF Power Output

1. Test Procedure

The EUT RF output was connected to Powermeter. The EUT was setup to transmit continuously with maximum power. A spectrum analyzer was setup to measure peak power. Measurements were performed at three frequencies (low, middle, and high channels) with all modulations.

2. Test Results

Modulation : CDMA 850 DL

	Freq. Tuned (MHz)	Power Input (dBm)	Power output (dBm)	Power Output (W)
Low	869.88	-56.01	39.61	9.14
Middle	881.52	-55.95	39.69	9.31
High	893.31	-55.92	39.37	8.65

Modulation : CDMA 850 UL

	Freq. Tuned (MHz)	Power Input (dBm)	Power output (dBm)	Power Output (W)
Low	824.88	-70.07	25.85	0.38
Middle	836.52	-70.83	25.34	0.34
High	848.31	-70.57	25.44	0.35

Modulation : PCS 1900 DL

	Freq. Tuned (MHz)	Power Input (dBm)	Power output (dBm)	Power Output (W)
Low	1931.25	-55.05	39.15	8.22
Middle	1960.00	-55.31	39.33	8.57
High	1987.50	-55.69	39.11	8.15

Modulation : PCS 1900 UL

	Freq. Tuned (MHz)	Power Input (dBm)	Power output (dBm)	Power Output (W)
Low	1851.25	-69.11	26.47	0.44
Middle	1880.00	-69.46	26.40	0.44
High	1907.50	-69.21	26.30	0.43

3.2.2 Occupied Bandwidth, Input/Output Comparison

1. Test Procedure

The EUT RF ports were connected to Spectrum analyzer. The EUT was setup to transmit maximum power. The spectrum analyzer was setup to measure the Occupied Bandwidth (defined as the 99% Power Bandwidth). The Occupied Bandwidth was measured at the input and output ports of the EUT at the middle channels for each type of modulation

2. Test Results : Complies

Refer to the following Graphs.

Input/Output Bandwidth Comparison – CDMA850_DL

Input/Output Bandwidth Comparison – CDMA850_UL

Input/Output Bandwidth Comparison – PCS 1900_DL

Input/Output Bandwidth Comparison – PCS 1900_UL

3.2.3 Out-of-Band Emissions at antenna terminal

1. Requirement

The power of any emissions outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least $(43 + 10 \log P)$ dB. Note: That corresponds to the level of -13 dBm for any out-of-band and spurious emissions.

2. Test Procedure

The EUT RF output was connected to spectrum analyzer. The EUT was setup to transmit the maximum power. The spectrum analyzer resolution bandwidth (RBW) was set to 1 MHz in the PCS band and 100 kHz in the Cell band. For measurements at the band edges, the resolution bandwidth (RBW) was set to 100 kHz. Measurements were performed at three frequencies at the low, middle, and high channels for all modulations types. Intermodulation was performed by injecting two modulated signals into the EUT. One signal was set at the bandedge of either the Up Link or Down Link band and the other signal was set 6 MHz away.

3. Test Results : Complies

3.2.4 Intermodulation

1. Requirement

the power of any emission shall be attenuated below the transmitter power (P) by at least $43 + 10 \log (P)$ dB. The limit of emission equal to -13dBm .

2. Test Procedure

Two RF signals set as inputs. The frequencies of both RF signals shall be within the repeater's operating band. The spacing between both RF signals shall be the minimum possible spacing applied in a network. The level of both RF input signals shall be increased, until the maximum rated output power per channel, as declared by the manufacturer, is reached.

3. Test Results : Complies

PCS 1900 High UL

3.2.5 Transmitter Spurious Radiation

4. Requirement

The power of any emissions outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least $(43 + 10 \log P)$ dB. Note: That corresponds to the level of -13 dBm for any radiated out-of-band and spurious emissions.

5. Test Procedure

The measurement antenna was placed at a distance of 3 meters from the EUT. During the tests, the antenna height and polarization as well as EUT azimuth were varied in order to identify the maximum level of emissions from the EUT. The frequency range up to 10-th harmonic of each of the three fundamental frequencies (low, middle, and high channels) was investigated. The worst case of emissions are reported. For spurious emissions attenuation, the substitution method was used. The EUT was substituted by a reference antenna (half-wave dipole - below 1 GHz, or Horn antenna - above 1GHz), connected to a signal generator. The signal generator output level (V_g in dBm) was adjusted to obtain the same reading as from EUT. The EIRP at the spurious emissions frequency was calculated as follows.

$$\text{EIRP(dBm)} = V_g + G(\text{dBi})$$

The EUT output port was connected to a $50\ \Omega$ termination load.

6. Test Results : Complies

* EIRP is calculated as: $\text{EIRP(dBm)} = V_g(\text{dBm}) + G(\text{dBi})$

All other emissions not reported are more than 20 dB below the limit.

Transmitter Spurious Radiated Emissions – CDMA 850_DL

Frequency [MHz]	SA Reading [dBuV/m]	Signal Generator Output required to have the same SA Reading as from EUT [dBm]	EIRP [dBm]	Limit [dBm]	Margin [dB]
All other emissions not reported are more than 20 dB below the limit.					

Transmitter Spurious Radiated Emissions – CDMA 850_UL

Frequency [MHz]	SA Reading [dBuV/m]	Signal Generator Output required to have the same SA Reading as from EUT [dBm]	EIRP [dBm]	Limit [dBm]	Margin [dB]
All other emissions not reported are more than 20 dB below the limit.					

Transmitter Spurious Radiated Emissions – PCS 1900_DL

Frequency [MHz]	SA Reading [dBuV/m]	Signal Generator Output required to have the same SA Reading as from EUT [dBm]	EIRP [dBm]	Limit [dBm]	Margin [dB]
All other emissions not reported are more than 20 dB below the limit.					

Transmitter Spurious Radiated Emissions – PCS 1900_UL

Frequency [MHz]	SA Reading [dBuV/m]	Signal Generator Output required to have the same SA Reading as from EUT [dBm]	EIRP [dBm]	Limit [dBm]	Margin [dB]

3.2.6 Out-of-Band Rejection

Band Pass – CDMA 850 mode DL

Band Pass – CDMA 850 mode UL

Band Pass – PCS 1900 mode DL

Band Pass – PCS 1900 mode UL

3.2.7 Frequency Stability

1. Requirement

The frequency stability shall be sufficient to ensure that the fundamental emission stays within the authorized frequency block.

2. Test Procedure

The EUT was placed inside the temperature chamber. The RF output port was connected to a spectrum analyzer. The EUT was setup to transmit the maximum power. After the temperature stabilized for approximately 20 minutes, the transmitting frequency was measured by the spectrum analyzer and recorded. At room temperature, the frequency was measured when the EUT was powered with the nominal voltage and with 85% and 115% of the nominal voltage.
