

# PAN9019A

Wi-Fi 6 Dual Band 2.4 GHz/5 GHz, Bluetooth® and  
802.15.4 Module

## Product Specification

Rev. 1.0

## Overview

The PAN9019A is a 2.4 GHz and 5 GHz ISM band Wi-Fi, Bluetooth®, and 802.15.4 radio module, which allows easy integration of Wi-Fi, Bluetooth, and 802.15.4 based technologies into various electronic devices.

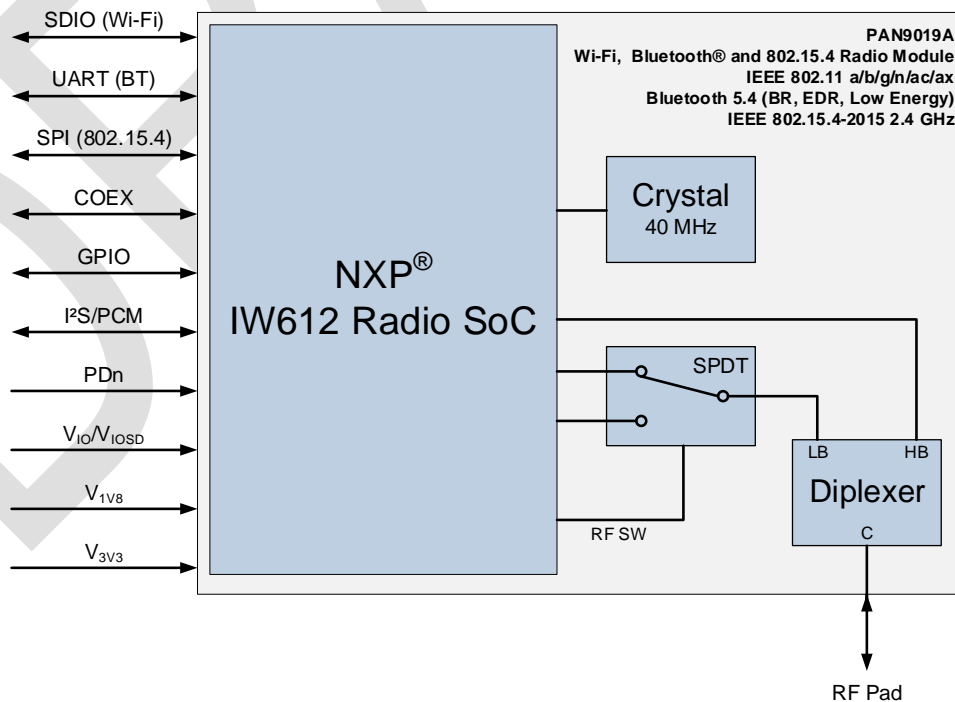

## Features

- Dual band 2.4 GHz and 5 GHz 802.11 a/b/g/n/ac/ax Wi-Fi, Bluetooth®, and 802.15.4 combo module
- Supports WPA3 personal and enterprise security
- Authenticated and secured boot
- 802.11e Quality of Service is supported for multimedia application
- IEEE 802.11ax, 1x1 spatial stream with data rates up to 600 Mbps (MCS11, 80 MHz channel bandwidth)
- OFDMA (UL/DL) and MU-MIMO (UL/DL)
- Bluetooth 5.4
- WCI-2 and 5-wire PTA coexistence interfaces
- Generic interfaces include SDIO 3.0 and high-speed UART for host processor connection
- OS driver support for RTOS, Linux®, and Android®

## Characteristics

- Surface Mount Type (SMT): 15.3 mm x 12 mm x 2.5 mm
- NXP® IW612 WLAN 2.4 GHz and 5 GHz, Bluetooth and 802.15.4 single-chip solution inside
- Rx sensitivity: -98 dBm at IEEE 802.11b 1 Mbps
- IEEE 802.11ax 20 MHz, 40 MHz, 80 MHz channel bandwidth
- Power supply: 1.8 V and 3.3 V
- SDIO 1 bit or 4 bit
- Wide temperature range: -40 °C to 85 °C

This Product Specification does not lodge the claim to be complete and free of mistakes.

If this document is marked as preliminary, please be aware that its final content is not yet concluded and the use of it is at your own risk.

### **Document Acceptance**

By signing the Product Specification, you acknowledge that you are a legal representative for your company and that you understand and accept the validity of the contents herein.

If the signed version of the Product Specification has not been returned to Panasonic within 30 days after receipt of the product, the specification or approval sheet shall be deemed to be accepted by you.

### **Engineering Samples (ES)**

If Engineering Samples are delivered to the customer, these samples have the status "Engineering Samples". This means that the design of this product is not yet concluded. Engineering Samples may be partially or fully functional, and they may differ from the published Product Specification.

Engineering Samples are not qualified and they are not to be used for reliability testing or series production.

### **Disclaimer**

The customer acknowledges that samples may deviate from the Product Specification and may bear defects due to their status of development and the lack of qualification mentioned above.

Panasonic rejects any liability or product warranty for Engineering Samples. In particular, Panasonic disclaims liability for damages caused by:

- The use of the Engineering Sample other than for evaluation purposes, particularly the installation or integration in another product to be sold by the customer,
- Deviation or lapse in function of the Engineering Sample,
- Improper use of the Engineering Sample.

Panasonic Industrial Devices Europe GmbH disclaims any liability for consequential and incidental damages. In case of any queries regarding the Engineering Samples, please contact your local sales partner or the related product manager.

# 1 About This Document

## 1.1 Purpose and Audience

This Product Specification provides details on the functional, operational, and electrical characteristics of the Panasonic PAN9019A module. It is intended for hardware design, application, and Original Equipment Manufacturers (OEM) engineers.

The product is referred to as “PAN9019A” and “module” within this document.

## 2 Overview

The PAN9019A is a dual band 2.4 GHz and 5 GHz 802.11 a/b/g/n/ac/ax Wi-Fi radio module with integrated Bluetooth® Basic Rate (BR) / Enhanced Data Rate (EDR) / Low Energy (LE) and 802.15.4 radio, specifically designed for highly integrated and cost-effective applications. The independent operation of the three standards enables 802.11ax data rates with High Efficiency (HE) and low-power operation (Bluetooth LE and 802.15.4).

Latest technologies like multiuser MIMO and OFDMA improve the efficiency in large networks, while the 1024-QAM modulation allows high data rates. Integrated power management, a fast dual-core CPU, 802.11i/w security standard support, and high-speed data interfaces deliver the performance for the speed, reliability, and quality requirements of next generation products.

Tx power calibration data and Wi-Fi/Bluetooth/802.15.4 system parameters are pre-stored on the one-time-programmable memory of the PAN9019A during production at Panasonic. Thus, the module reduces design, test, and calibration effort resulting in reduced time-to-market compared to discrete solutions.

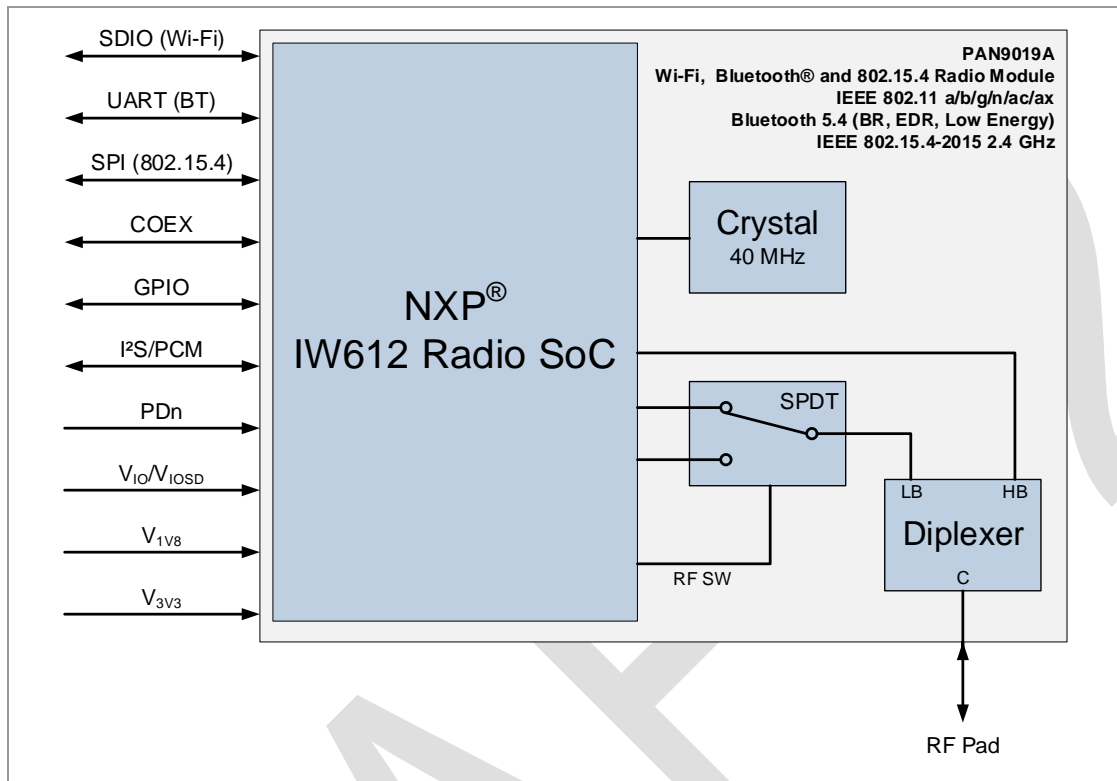

Integrating Wi-Fi, Bluetooth, and 802.15.4 wireless connectivity allows high throughput applications for industrial devices and appliances. The combination of Wi-Fi, Bluetooth, and 802.15.4 provides the highest flexibility for connectivity.

## 2.3 Host Interface

There are three major host interfaces to operate the PAN9019A's radios. A SDIO interface is connected to the Wi-Fi sub-system's CPU, while a high-speed UART interface is the Bluetooth sub-system's major interface. 802.15.4 is controlled via SPI. All three interfaces can be operated independently.

Type	Features
SDIO interface	<p>The device supports an SDIO device interface that conforms to the industry standard SDIO full-speed card specification and allows a host controller using the SDIO bus protocol to access the device.</p> <ul style="list-style-type: none"> <li>• Supports SDIO 3.0 Standard</li> <li>• 1-bit SDIO or 4-bit SDIO transfer modes with full clock range up to 208 MHz</li> <li>• Allows card to interrupt host</li> </ul>
High-speed UART interface	<p>The device supports a high-speed Universal Asynchronous Receiver/Transmitter (UART) interface for controlling the Bluetooth subsystem.</p> <ul style="list-style-type: none"> <li>• Two pins for transmit and receive operations</li> <li>• Two flow control pins</li> <li>• Interrupt triggers for low-power, high throughput operation</li> </ul>
SPI	<p>The device supports a Serial Peripheral Interface (SPI) for controlling the 802.15.4 subsystem.</p> <ul style="list-style-type: none"> <li>• SPI with maximum clock speed of 10 MHz</li> <li>• Additional interrupt pin (SPI_INT)</li> </ul>

### SDIO Pin Assignment

Pin No.	Signal Name	Direction	Type	Description
D1	SD_CLK	Input	SDIO 3.0	SDIO clock signal
D2	SD_CMD	Output/Input	Voltage Level: $V_{SD}$	SDIO command 1-bit mode: command/response 4-bit mode: command

G1	SD_DAT3	Output/Input		Data line 3 1-bit mode: Reserved 4-bit mode: Data bit [3]

### UART Pin Assignment

Pin No.	Signal Name	Direction	Type	Description
A3	UART_TX	Output	Host Controller Interface (HCI)	Transmit data output to host
A2	UART_RX	Input		Receive data input from host
B2	UART_RTS	Output	Voltage Level: $V_{IO}$	Request to send (active low) to host
B1	UART_CTS	Input		Clear to send (active low) from host

### SPI Pin Assignment

Pin No.	Signal Name	Direction	Type	Description
C9	SPI_RXD	Input	Serial Peripheral Interface (SPI)  Voltage Level: $V_{IO}$	Transmit data input from host (MOSI)
C10	SPI_FRM	Input		Frame signal from host (chip select; active low)
D9	SPI_TXD	Output		Transmit data output to host (MISO)
E3	SPI_INT	Output		Interrupt signal to host
E9	SPI_CLK	Input		Clock signal from host

For further information please refer to [⇒ 4.5.1 Host Interface](#).

## 2.4 Audio-Interfaces

The PAN9019A provides two audio interfaces that can be used to receive audio data from the Bluetooth sub-system and directly transmit it to an audio codec or vice-versa. These are an Inter IC Sound (I<sup>2</sup>S) and a Pulse Coded Modulation (PCM) interface. The configuration of the audio interfaces is done via vendor specific Host Controller Interface (HCI) commands.

The I<sup>2</sup>S and PCM audio interfaces can be used for speech over Bluetooth® applications like the Hands Free Profile (HFP).

### 2.4.1 I<sup>2</sup>S Interface

The device supports an Inter IC Sound (I<sup>2</sup>S) interface for audio transmission and reception.

Type	Features
I <sup>2</sup> S Interface	<ul style="list-style-type: none"> <li>• Central (master) or peripheral (slave) mode</li> <li>• I<sup>2</sup>S (Inter-IC Sound) interface for audio data connection to Analog-to-Digital Converters (ADC) and Digital-to-Analog Converters (DAC)</li> <li>• 3-state I<sup>2</sup>S interface capability</li> <li>• Supports clock speeds of 4.096 MHz, 2.048 MHz, and 2 MHz</li> </ul>

The I<sup>2</sup>S interface can be connected via following pins. Please see ⇒ [2.2 Pin Configuration](#) for information on the pin location and alternative pin functions. Please note that the I<sup>2</sup>S pins are shared with the PCM pins.

Pin No.	Signal Name	Direction	Voltage Level	Description
B4	I2S_CCLK	Output	V <sub>IO</sub>	I <sup>2</sup> S codec main clock signal (optional). Optional clock used for some codecs. Derived from I2S_BCLK.
A4	I2S_DIN	Input	V <sub>IO</sub>	I <sup>2</sup> S data from audio codec to PAN9019A
B5	I2S_DOUT	Output	V <sub>IO</sub>	I <sup>2</sup> S data from PAN9019A to audio codec
A6	I2S_BCLK	Output/Input	V <sub>IO</sub>	I <sup>2</sup> S audio bit clock: <ul style="list-style-type: none"> <li>• Central mode: Output</li> <li>• Peripheral mode: Input</li> </ul>
B6	I2S_LRCLK	Output/Input	V <sub>IO</sub>	I <sup>2</sup> S audio left-right clock: <ul style="list-style-type: none"> <li>• Central mode: Output</li> <li>• Peripheral mode: Input</li> </ul>

Please refer to ⇒ [4.5.2.1 I<sup>2</sup>S Interface](#) for specifications.

## 2.4.2 PCM Interface

The device supports a Pulse Code Modulation (PCM) interface for audio transmission and reception.

Type	Features
PCM Interface	<ul style="list-style-type: none"> <li>• Central (master) or peripheral (slave) mode</li> <li>• PCM bit width size of 8 bits or 16 bits</li> <li>• Up to four slots with configurable bit width and start positions</li> <li>• 3-state PCM interface capability</li> <li>• PCM short frame and long frame synchronization</li> <li>• Supports clock speeds of 4.096 MHz, 2.048 MHz, and 2 MHz</li> </ul>

The PCM interface can be connected via following pins. Please see ⇒ [2.2 Pin Configuration](#) for information on the pin location and alternative pin functions. Please note that the PCM pins are shared with the I<sup>2</sup>S pins.

Pin No.	Signal Name	Direction	Voltage Level	Description
B5	PCM_DOUT	Output	V <sub>IO</sub>	PCM data from PAN9019A to audio codec
A6	PCM_CLK	Output/Input	V <sub>IO</sub>	PCM clock signal <ul style="list-style-type: none"> <li>• Central mode: Output</li> <li>• Peripheral mode: Input</li> </ul>
B4	PCM_MCLK	Output	V <sub>IO</sub>	PCM codec main clock signal (optional). Optional clock used for some codecs, derived from PCM_CLK
A4	PCM_DIN	Input	V <sub>IO</sub>	PCM data from audio codec to PAN9019A
B6	PCM_SYNC	Output/Input	V <sub>IO</sub>	PCM sync pulse signal <ul style="list-style-type: none"> <li>• Central mode: Output</li> <li>• Peripheral mode: Input</li> </ul>

Please refer to ⇒ [4.5.2.2 PCM Interface](#) for specifications.

## 2.5 Coexistence

The coexistence of the Wi-Fi and Bluetooth® radio inside the PAN9019A is managed by the central hardware Packet Traffic Arbiter (PTA). It interfaces with the internal radios and controls the internal RF switches. Following table shows which operations can be performed simultaneously during one arbitration time slot. The PTA arbitrates the listed scenarios automatically.

Scenario Enumeration	Bluetooth	802.15.4	Wi-Fi 2.4 GHz	Wi-Fi 5 GHz
1	TX	-	-	TX or RX
	-	TX	-	TX or RX
2	-	-	TX	-
3	RX	RX	RX	-
3	RX	RX	-	TX or RX

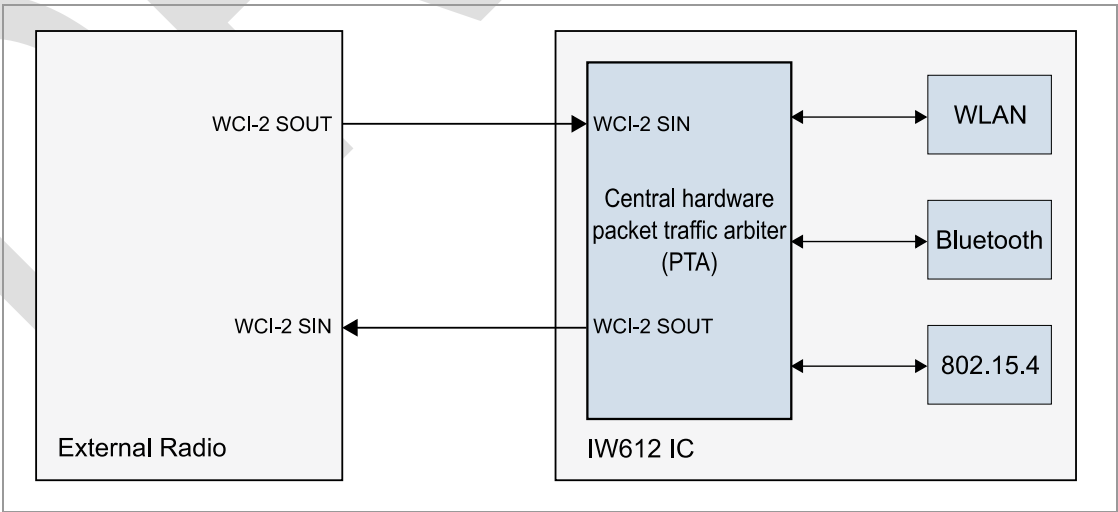

In addition to the internal radios, the PTA can operate one external radio. There are two interfaces for the coexistence with an external radio. The first is a WCI-2 interface following the specifications of the Bluetooth Special Interest Group (Bluetooth SIG) Core Specification Volume 7 (Wireless Coexistence Volume). As a second option, the PTA external interface can be used, whereas the interface's pins are shared with the SPI to control the 802.15.4 radio. Both are described in the following.

The PTA external interface and the SPI host interface share the same pins. Therefore, the PTA external interface cannot be utilized, if 802.15.4 is used.

**2.5.1 WCI-2 External Coexistence Interface**

Based on the Bluetooth SIG Wireless Coexistence Volume, the device supports a Wireless Coexistence Interface 2 (WCI-2) protocol for WLAN/Bluetooth/802.15.4 coexistence with an external Mobile Wireless System (MWS), such as a Long Term Evolution (LTE) device. The coexistence interface includes a Mobile Wireless System (MWS) transport controller to accommodate a 2-wire, UART-based serial transport interface. This interface is a standard full-duplex UART (TxD and Rx) carrying logical signals framed as UART characters. In addition, it allows support of multiple logical channels.

An external MWS can be connected to pins F10 and F11 of the PAN9019A. Please see ⇒ [2.2 Pin Configuration](#) for information on the pin location and alternative pin functions.

Pin No.	Signal Name	Direction	Voltage Level	Description
F10	WCI-2_SIN	Input	V <sub>IO</sub>	Serial data from external radio
F11	WCI-2_SOUT	Output	V <sub>IO</sub>	Serial data to external radio

Specifications of the WCI-2 interface are documented in chapter ⇒ [4.5.3.1 WCI-2 Interface Specification](#). Moreover, the Bluetooth Core Specification describes the standard interface in Volume 7, Part A and Part C.

The WCI-2 interface is enabled via the mlan utility. Please use following command for enabling the interface. The default baud rate is 3 000 000.

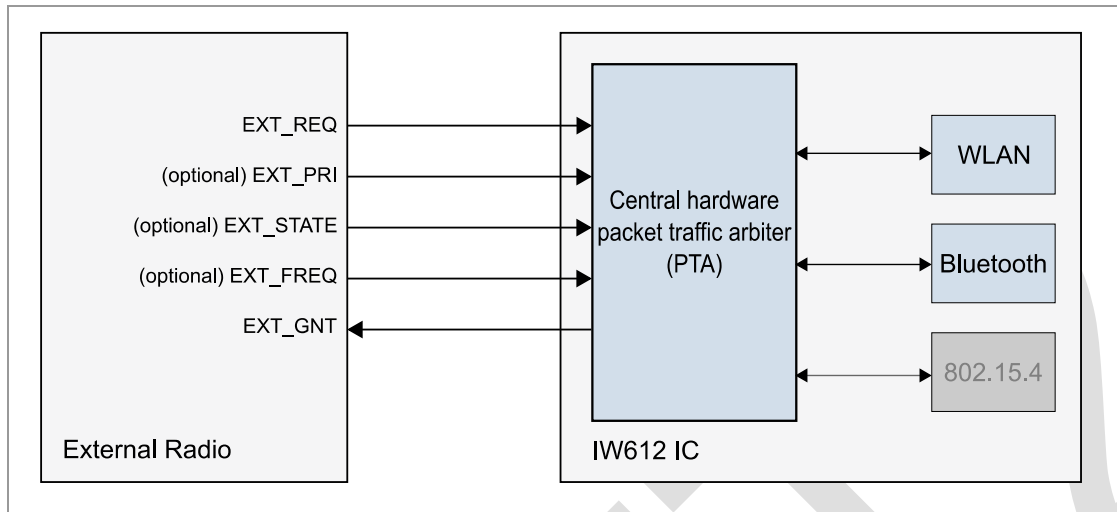

```
./mlanutl mlan0 hostcmd config/robust_btc.conf
external_coex_uart_gpio_config
external_coex_uart_gpio_config={
  CmdCode=0x00e0
  Action:2=1 // 0x0 get, 0x1 set
  RSVD:2=0
  RobustCoexTlvType:2=0x0238 // TLV ID
  RobustCoexTlvLength:2={
  Enabled:1=0x07 // 0x08 disable, 0x07 enable
  // UART + GPIO feature
  ExtCoexHwIntWci2:1=0x01 // 0x00 disable, 0x01 enable
  // (coex uart interface)
  }
}
```

## 2.5.2 PTA External Coexistence Interface

An external radio can be connected to the PAN9019A's PTA external interface to realize the coexistence management. The PTA external interface consists of five signals that directly connect with the central hardware Packet Traffic Arbiter (PTA). Two of the five signal lines are mandatory: Request (EXT\_REQ) and Grant (EXT\_GNT). The remaining lines can be used to obtain additional information from the external radio.

The PTA external interface and the SPI host interface share the same pins. Therefore, the PTA external interface cannot be utilized, if 802.15.4 is used.

An external radio can be connected to the pins listed in the table below. Please see [⇒ 2.2 Pin Configuration](#) for further information on the pin location and alternative pin functions.

Pin No.	Signal Name	Direction	Voltage Level	Description
C10	EXT_REQ	Input	V <sub>IO</sub>	Request from the external radio
D9	EXT PRI	Input	V <sub>IO</sub>	(optional) External radio input priority signal
E9	EXT_STATE	Input	V <sub>IO</sub>	(optional) External radio state input signal High: Tx; Low: Rx
E3	EXT_FREQ	Input	V <sub>IO</sub>	(optional) External radio frequency input signal High: Overlap; Low: Non-overlap
C9	EXT_GNT	Output	V <sub>IO</sub>	Grant signal to the external radio

Specifications of the PTA external interface are documented in chapter [⇒ 4.5.3.2 PTA External Interface Specification](#).

### 3 Detailed Description

#### 3.1 Dimensions

Item	Dimension (mm)	Tolerance (mm)	Remark
Width	12.00	±0.35	
Length	15.30	±0.35	
Height	2.50	±0.20	With case

### 3.3 Packaging

The module is a mass production status product and will be delivered in the package described below.

#### 3.3.1 Tape Dimensions

#### 3.3.2 Packing in Tape

There might be at maximum two non-consecutive empty spaces in the component packed area per reel

### 3.3.3 Component Direction

### 3.3.4 Reel Dimension

### 3.3.5 Package Label

Example:

(1T)	Lot code
(1P)	Customer order number, if applicable
(2P)	Order number
(9D)	Date code
(Q)	Quantity
(HW/SW)	Hardware/software version

### 3.3.6 Regulatory Label

Example:

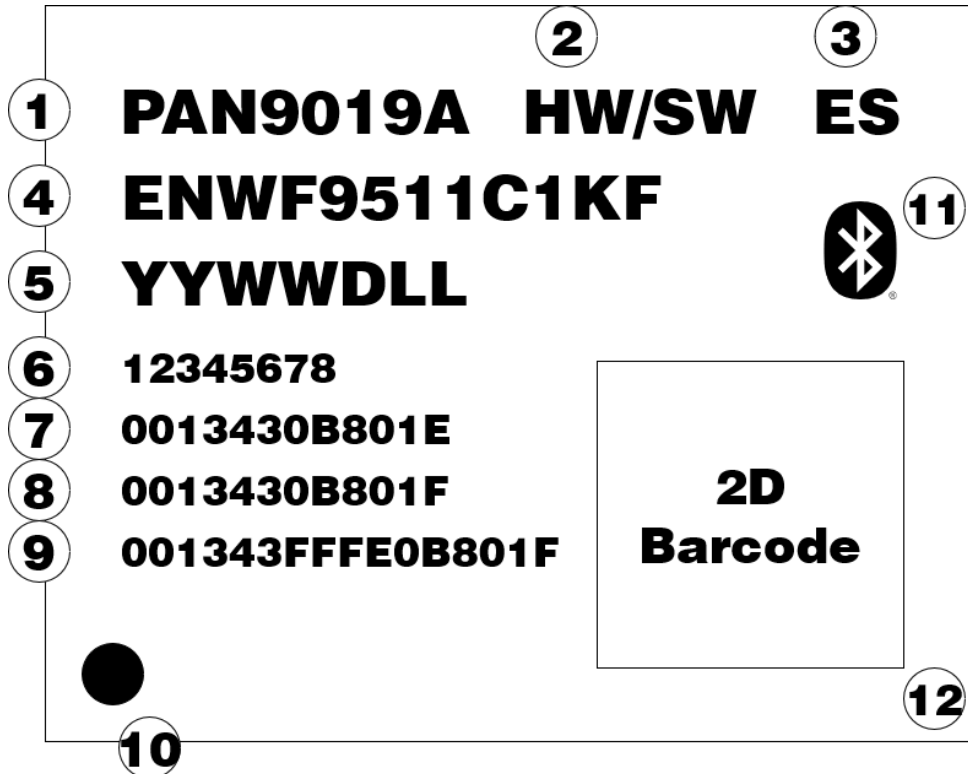

- |     |                                       |

### 3.3.7 Total Package

### 3.4 Case Marking

Example:

- 1 Brand Name
- 2 Hardware/Software Version
- 3 Engineering Sample (optional)
- 4 Model Name/ENW Number
- 5 Lot Code
- 6 Serial Number
- 7 MAC Address
- 8 Bluetooth Device Address
- 9 8 Byte MAC Address (802.15.4)
- 10 Pin 1 Marking
- 11 Bluetooth SIG Logo
- 12 2D Barcode

### 3.5 Labelling of M.2 Cards

#### 3.5.1 ENWF9511CMKF

Example:

1)	Marketing Name
2)	FCC ID
3)	IC ID
4)	MIC Conformity Mark
5)	MIC Radio Law ID
6)	MIC Telecommunication Business Law ID
7)	RCM mark
8)	UK-CA mark
9)	CE mark
10)	Product Number
11)	Hardware/Software Version
12)	Bluetooth SIG Logo

### 3.5.2 ENWF9511AMKF

Example:

1)	Marketing Name
2)	FCC ID
3)	IC ID
4)	MIC Conformity Mark
5)	MIC Radio Law ID
6)	MIC Telecommunication Business Law ID
7)	RCM mark
8)	UK-CA mark
9)	CE mark
10)	Product Number
11)	Hardware/Software Version
12)	Bluetooth SIG Logo

## 4 Specification

All specifications are over temperature and process, unless indicated otherwise.

### 4.1 Default Test Conditions

Temperature: 25 °C ± 10 °C  
Humidity: 40 % to 85 % RH  
Supply Voltage: 3.3 V, 1.8 V

### 4.2 Absolute Maximum Ratings

The maximum ratings may not be exceeded under any circumstances, not even momentarily or individually, as permanent damage to the module may result.

Symbol	Parameter	Condition	Min.	Typ.	Max.	Unit	
T <sub>STOR</sub>	Storage Temperature		-40		85	°C	
V <sub>ESD</sub>	ESD Robustness	All pads, according to human body model (HBM), JEDEC STD 22, method A114			1 000	V	
		According to charged device model (CDM), JEDEC STD 22, method C101			500	V	
P <sub>RF</sub>	RF Input Level	Wi-Fi 802.11b DSSS			0.47	dBm	
		Wi-Fi 802.11b CCK			0.47	dBm	
		Wi-Fi OFDM			-9.7	dBm	
		Bluetooth® Basic Rate 1 Mbps			-3	dBm	
		Bluetooth® Enhanced Data Rate 2 Mbps and 3 Mbps			-6	dBm	
		Bluetooth® Low Energy			-3	dBm	
3V3	Maximum Voltage				3.96	V	
1V8					2.16	V	
V <sub>IO</sub>		1.8 V analog power supply				2.16	V
		3.3 V analog power supply				3.96	V

Symbol	Parameter	Condition	Min.	Typ.	Max.	Unit
V <sub>SD</sub>		1.8 V analog power supply			2.16	V
		3.3 V analog power supply			3.96	V

### 4.3 Recommended Operating Conditions

The maximum ratings may not be exceeded under any circumstances, not even momentarily or individually, as permanent damage to the module may result.

Symbol	Parameter	Condition	Min.	Typ.	Max.	Unit
T <sub>A</sub>	Ambient Operating Temperature Range	Industrial grade	-40		85	°C
3V3	Recommended supply voltage		3.14	3.3	3.46	V
1V8			1.71	1.8	1.89	V
V <sub>IO</sub>		1.8 V analog power supply	1.71	1.8	1.89	V
V <sub>IO</sub>		3.3 V analog power supply	3.14	3.3	3.46	V
V <sub>SD</sub>		1.8 V analog power supply	1.71	1.8	1.89	V
V <sub>SD</sub>		3.3 V analog power supply	3.14	3.3	3.46	V

#### 4.3.1 Digital Pin Characteristics

##### 4.3.1.1 V<sub>IO</sub> with 1.8V or 3.3V Operation

Symbol	Parameter	Condition	Min.	Typ.	Max.	Unit
V <sub>IH</sub>	High Level Input Voltage		0.7*V <sub>IO</sub>		V <sub>IO</sub> + 0.4	V
V <sub>IL</sub>	Low Level Input Voltage		-0.4		0.3*V <sub>IO</sub>	V
V <sub>HYS</sub>	Input hysteresis		100			mV
V <sub>OH</sub>	High Level Output Voltage		V <sub>IO</sub> - 0.4			V
V <sub>OL</sub>	Low Level Output Voltage				0.4	V

### 4.3.1.2 $V_{SD}$ with 1.8V or 3.3V Operation

Symbol	Parameter	Condition	Min.	Typ.	Max.	Unit
$V_{IH}$	High Level Input Voltage		$0.7 \cdot V_{SD}$		$V_{SD} + 0.4$	V
$V_{IL}$	Low Level Input Voltage		-0.4		$0.3 \cdot V_{SD}$	V
$V_{HYS}$	Input hysteresis		100			mV
$V_{OH}$	High Level Output Voltage		$V_{SD} - 0.4$			V
$V_{OL}$	Low Level Output Voltage				0.4	V
$R_{PU/PD}$	Internal nominal pull-up/pull-down resistance		70	100	140	k $\Omega$

### 4.3.2 Internal Operating Frequencies

Symbol	Parameter	Condition	Min.	Typ.	Max.	Unit
$f_{REFCLK1}$	WLAN/MCU Crystal Fundamental Frequency	Frequency tolerance < $\pm 20$ ppm over operating temperature and aging		40		MHz

## 4.4 Current Consumption

The current consumption depends on the user scenario and on the setup and timing in the power modes.

Following supply configuration was used for obtaining the current consumption values in this chapter:

- 1V8: Connected to 1.8 V power supply
- 3V3: Connected to 3.3 V power supply
- $V_{IO}$ : Connected to 3.3 V power supply
- $V_{SD}$ : Connected to 1.8 V power supply

Parameter	Condition	Typ. at 1.8 V	Typ. at 3.3 V	Unit
Power Down	-	0.019	0.078	mA
Sleep Mode	Deep sleep mode - Bluetooth only	0.25	0.14	mA
	Deep sleep mode - Wi-Fi only	0.36	0.08	mA
	Deep sleep mode - Wi-Fi and Bluetooth	0.41	0.14	mA
Maximum Active Current Consumption	5 GHz, 802.11a, 6 Mbps at 19 dBm + Bluetooth® Low Energy transmit at 21 dBm	580	280	mA
Peak Current Consumption	Peak current during device initialization	496	368	mA
	5 GHz 802.11ax 80 MHz, MCS11 receive + Bluetooth® Low Energy transmit at 21 dBm	644	0.43	mA
	5 GHz digital predistortion (DPD) + Bluetooth® Low Energy transmit at 21 dBm	900	368	mA

#### 4.4.1 WLAN Current Consumption

**4.5.1.2 High-Speed UART Interface**

The High-Speed UART Interface pins are powered from the  $V_{IO}$  voltage supply with 3.3 V or 1.8 V.

For DC specifications please refer to “Digital Pin Characteristics” ⇒ [4.3 Recommended Operating Conditions](#)..

**Interface Transport Settings**

### 4.5.1.3 SPI

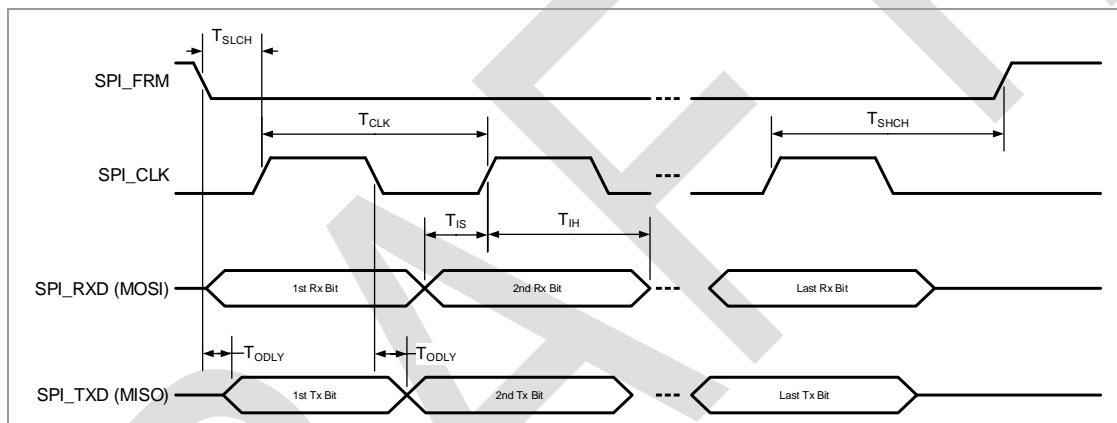

The SPI pins are powered from the  $V_{IO}$  voltage supply with 3.3 V or 1.8 V.

For DC specifications please refer to “Digital Pin Characteristics” ⇒ [4.3 Recommended Operating Conditions](#).

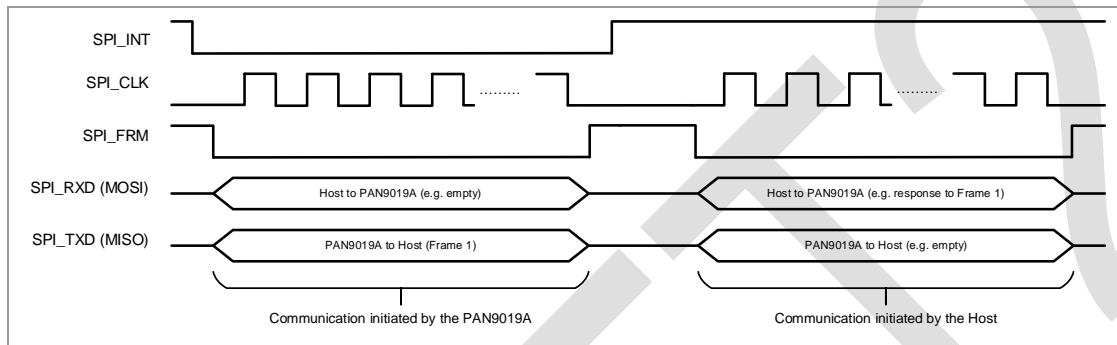

The SPI interface should be configured with following characteristics:

- The clock IDLE state shall be low (CPOL = 0)
- The data shall be captured on rising edge and changed on falling edge (CPHA = 0)
- The SPI\_FRM line is asserted for a whole frame containing multiple bytes

Symbol	Parameter	Condition	Min.	Typ.	Max.	Unit
$T_{SLCH}$	Chip select setup time	-	12	-	-	MHz
$T_{SHCH}$	Chip select hold time	-	0	-	-	ns
$T_{CLK}$	Clock period	-	100	-	-	ns
$T_{IS}$	Input setup time	-	12	-	-	ns
$T_{IH}$	Input hold time	-	0	-	-	ns
$T_{ODLY}$	Output delay time	-	-	-	2	ns

In addition to the standard SPI signals, the SPI\_INT signal is required to be connected to the host. Because the frame and clock signals are controlled by the host, the module cannot start a communication by its own. Instead, the module can request the host to start a communication by asserting the SPI\_INT line if it has data to transmit. The SPI\_INT usage is illustrated below.

## 4.5.2 Audio Interface

The I<sup>2</sup>S and PCM audio interfaces can be used for speech over Bluetooth<sup>®</sup> applications like the Hands Free Profile (HFP).

### 4.5.2.1 I<sup>2</sup>S Interface

The I<sup>2</sup>S Interface supports two modes of operation:

- I<sup>2</sup>S master: Central mode
- I<sup>2</sup>S slave: Peripheral mode

In I<sup>2</sup>S central mode, the interface uses an audio input clock of 4.096 MHz or 2.048 MHz to provide the appropriate codec main clock (I2S\_CCLK) and bit clock (I2S\_BCLK) frequency to match the sampling rates of each audio data format. The sampling rates can be 8 kHz to 16 kHz.

In I<sup>2</sup>S peripheral mode, the interface does not provide the bit clock (I2S\_BCLK) but it can provide the codec main clock (I2S\_CCLK).

#### I<sup>2</sup>S Protocol Specification

Below, the I<sup>2</sup>S protocol is shown. The data is sent with the Most Significant Bit (MSb) first. Please note that the signal I2S\_DATA represents both, the I2S\_DIN and I2S\_DOUT signal.

The PAN9019A supports mono and dual channel modes.  
In mono-channel mode, by default the left channel is used for data.

In dual-channel mode, the two channels are supported on two time slots.

#### 4.5.2.2 PCM Interface

##### Modes of Operation

The PCM Interface supports two modes of operation:

- PCM master: Central mode
- PCM slave: Peripheral mode

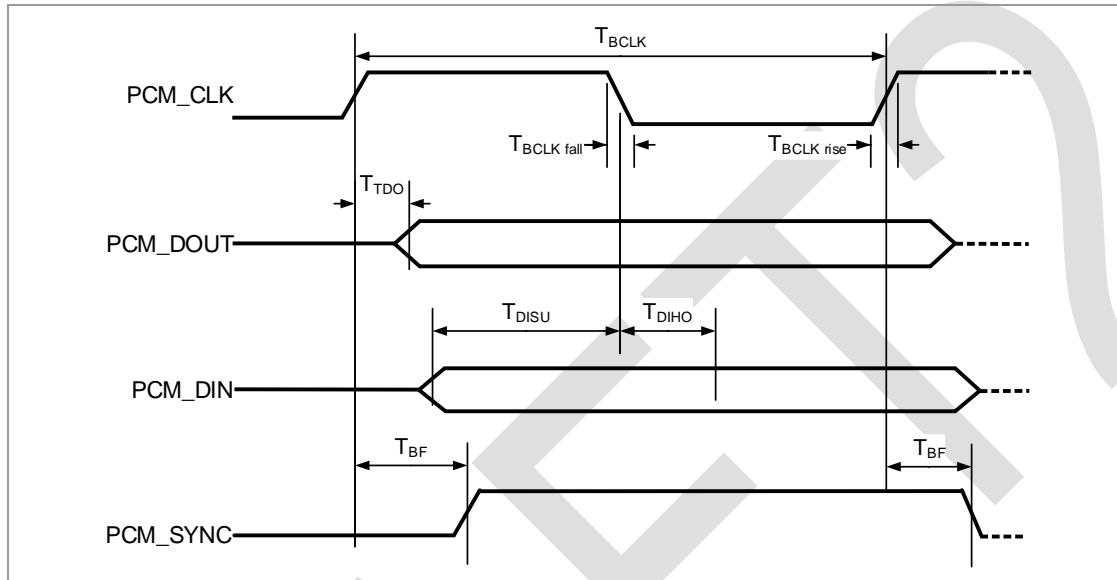

In PCM central mode, the interface generates a 2 MHz or a 2.048 MHz PCM\_CLK and an 8 kHz PCM\_SYNC signal. An alternative PCM master mode is available that uses an externally generated PCM\_CLK, but still generate the 8 kHz PCM\_SYNC. The external PCM\_CLK must have a frequency that is an integer multiple of 8 kHz. Supported frequencies are in the 512 kHz to 4 MHz range.

In PCM peripheral mode, the interface has both PCM\_CLK and PCM\_SYNC as inputs, thereby letting another unit on the PCM bus generate the signals.

The PCM interface consists of up to four PCM slots (time-divided) preceded by a PCM synchronization signal. Each PCM slot can be 8 bits or 16 bits wide. The slots can be separated

in time, but they are not required to follow immediately after another. The timing is relative to PCM\_SYNC.

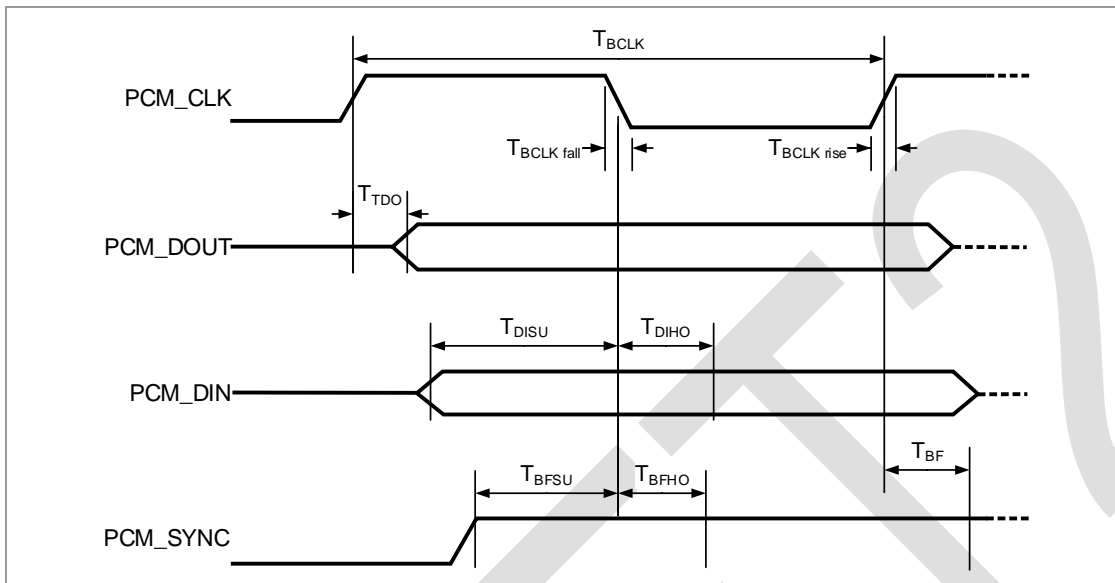

**PCM Timing Data – Central Mode**

Symbol	Parameter	Min.	Typ.	Max.	Unit

$T_{DO}$	Delay from PCM_CLK risign edge to PCM_DOUT rising edge	-	-	30	ns
$T_{DISU}$	Setup time for PCM_DIN before PCM_CLK falling edge	15	-	-	ns
$T_{DIHO}$	Hold time for PCM_DIN after PCM_CLK falling edge	10	-	-	ns
$T_{BFSU}$	Setup time for PCM_SYNC before PCM_CLK falling edge	15	-	-	ns
$T_{BFHO}$	Hold time for PCM_SYNC after PCM_CLK falling edge	10	-	-	ns

**PCM Protocol Specification**

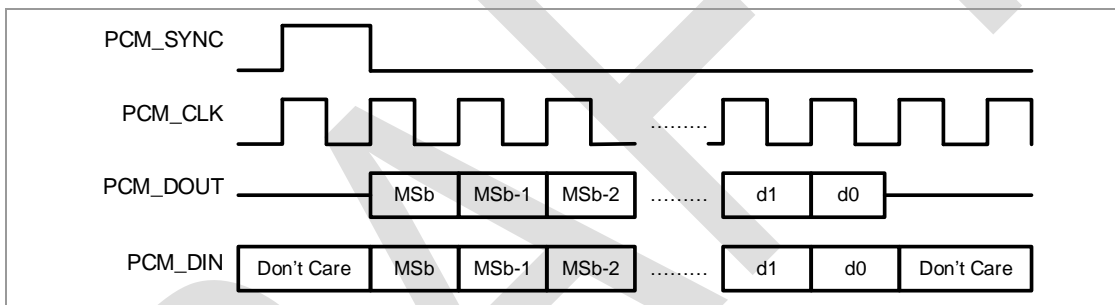

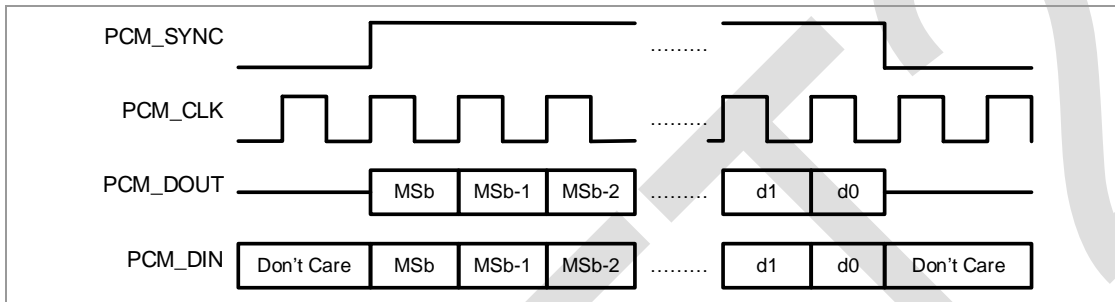

The PCM protocol supports short and long frame synchronization and mono or dual channel operation.

Long and short synchronization operations are illustrated in the two pictures below. The first shows a protocol with a long frame synchronization and the second with short frame synchronization. The Most Significant Bits (MSb) are marked by MSb-n to be independent from the protocol length. Please note that the protocols are shown from central mode perspective.

The least significant bits are marked with their data bit index (e.g. d0). In case of the long frame synchronization, the output and input data transmission start with the assertion of the

PCM\_SYNC signal and both data streams end with the de-assertion of the synchronization signal<sup>13</sup>.

If short frame synchronization is used, the PCM\_SYNC line is asserted for the period of one clock cycle. The falling edge of PCM\_SYNC marks the start of the data transmission. Because the end of the data transfer is not explicitly communicated via the PCM\_SYNC line, the last input data bit level must be applied until the end of the last clock cycle.

The mono and dual channel operation is independent from the frame synchronization length. Therefore, this is explained only for a short frame synchronization.

In mono-channel mode, by default the left channel is used for data (first picture below). In dual-channel mode, the two channels are supported on two time slots (second picture below).

<sup>13</sup> In PCM central mode, PCM long frame synchronization is 1 clock wide. In PCM peripheral mode, PCM central long frame synchronization pattern is supported.

### 4.5.3 Coexistence Interfaces

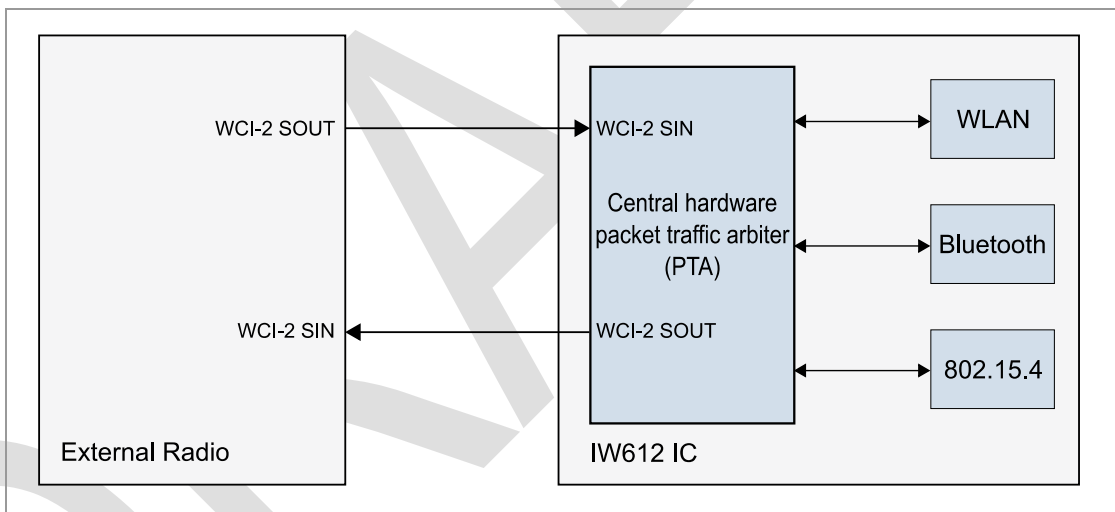

#### 4.5.3.1 WCI-2 Interface Specification

##### Interface and Transport Layer Description

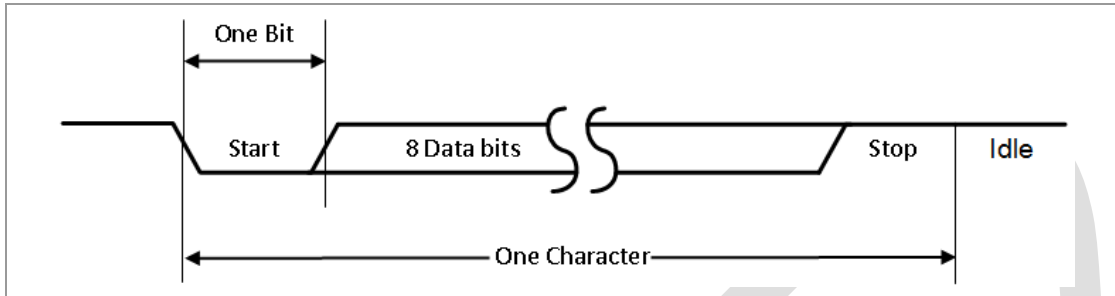

The Peripheral Interface pins are powered from the  $V_{IO}$  voltage supply with 3.3 V or 1.8 V.

The messaging is based on a standard UART format. Like the Rx and Tx lines of an UART interface, the SIN and SOUT lines must be crossed (null-modem connection):

For DC specifications please refer to [⇒ 2.2 Pin Configuration](#).

The interface specifications are shown below.

Item	Range	Comment
Baudrate	921 600 ~ 4 000 000 (default is 3 Mbaud)	Baud
Data Bits	8	LSB first
Parity Bits	0	No parity
Stop Bit	1	One stop bit
Flow Control	No	No flow control

One message consists of 8 bits and is thus sent with one single WCI-2 transmission. The three lower bits form the message type identifier and the remaining five contain the messages information. All messages are transmitted with the Least Significant Bit (LSB) first.

4	Ext. Radio → PAN9019A	MWS Scan Frequency Message
5	Ext. Radio → PAN9019A PAN9019A → Ext. Radio	Reserved for Future Use (RFU)
6	Not defined vendor message	
7	Ext. Radio → PAN9019A	MWS Priority Message (vendor specific and optional)

### Real-Time Signaling Message

The real-time signaling message is used to transport real-time signals over the 2-wire transport interface.

The real-time signaling message conveys the real-time signals (Bluetooth Core Specification, Volume 7, Part A) in one message. The time reference point for the real-time signaling message is the end of message bit MSG[4] (transition to stop bit). The content of the message depends on the direction of the message.

#### External Radio to PAN9019A

If a real-time signaling message is sent from the external radio (also called MWS) to the PAN9019A, the message is a request to operate:

- MWS\_Rx = 1 indicates an external radio request to Rx
- MWS\_Tx = 1 indicates an external radio request to Tx

Real-Time Signaling	MSG [0]	MSG [1]	MSG [2]	MSG [3]	MSG [4]
Type ident. = 0 Ext. radio to PAN9019A	FRAME_SYNC	MWS_RX	MWS_TX	PATTERN [0]	PATTERN [1]

After the Real Time Signaling message was sent, the external radio can send an optional priority message of type 7. Please see the description of the message **MWS Priority Message (Vendor Specific)** for details.

#### PAN9019A to External Radio

The arbitration is controlled by the PAN9019A and by sending a real time signaling message to the external radio, the arbitration result is handed over:

- BT\_Rx\_Pri = 1: the Bluetooth® radio Rx wins the arbitration and is in operation
- BT\_Tx\_On = 1: the Bluetooth® radio Tx wins the arbitration and is in operation
- 802\_Rx\_Pri = 1: Wi-Fi Rx wins the arbitration and is in operation

- 802\_Tx\_On = 1: Wi-Fi Tx wins the arbitration and is in operation
- MSG[0-3] = 0: Operation is granted to the external radio

## Transport Control Message

The transport control messages can modify the state and request state information of the MWS coexistence interface.

Transport Control Message	MSG [0]	MSG [1]	MSG [2]	MSG [3]	MSG [4]
Type ident. = 1 Transport Control Message	RESEND_REAL_TIME	RFU	RFU	RFU	RFU

Signal Name	Description
RESEND_REAL_TIME	<p>This bit is set if a device wants to get a status update of the real-time signals. The signal is usually used after wake-up from sleep of the transport interface to get an update of the real-time signals.</p> <p>If the receiving device's transport interface is awake it shall send a real-time message with the current status of the real-time signals within 4 UART character period. If the signal is not transmitted within 4 UART character periods, the device is considered asleep.</p> <p>If the receiving device's transport interface is not awake it shall not send a real-time message.</p> <p><b>Bluetooth initiated:</b> If the MWS is currently scanning or has an ongoing inactivity duration, the MWS shall send a frequency scan message or an inactivity duration message after transmitting the real-time message.</p> <p>If the receiving device's transport interface is not awake it shall not send a frequency scan or inactivity duration message.</p>

## Transparent Data Message

Please note that this message type is currently not used.

Transparent data messages can contain vendor specific data. Because only four bits can be transmitted per message, the bit MSG[0] is used to define if the least significant or most significant nibble of a byte is sent.

Transparent Data Message	MSG [0]	MSG [1]	MSG [2]	MSG [3]	MSG [4]
Type ident. = 2	NIBBLE_POSITION	DATA [0]/[4]	DATA [1]/[5]	DATA [2]/[6]	DATA [3]/[7]

Signal Name	Description
NIBBLE_POSITION	0 = least significant nibble 1 = most significant nibble
DATA[n]; n=0 .. 7	Data bits of the message octet

### MWS Inactivity Duration Message

The inactivity duration messages is used to send the MWS\_INACTIVITY\_DURATION signal from the external radio (MWS device) to the PAN9019A (coexistence controller).

Message	MSG [0]	MSG [1]	MSG [2]	MSG [3]	MSG [4]
MWS Inactivity Duration Message	DURATION [0]	DURATION [1]	DURATION [2]	DURATION [3]	DURATION [4]

The idle duration is encoded in 5 bits given by the formula:

$$\text{Inactivity\_Duration} = \text{DURATION} \cdot 5 \text{ ms}$$

Inactivity durations smaller than 5 ms are not communicated.

If all bits are set to "1" the inactivity duration is infinite. If all bits are set to "0" or MWS\_RX or MWS\_TX are set to "1", the inactivity period ends.

### MWS Scan Frequency Offset Message

The MWS scan frequency offset message is used to send the MWS\_SCAN\_FREQUENCY\_OFFSET signal from the external radio (MWS device) to the PAN9019A (coexistence controller)..

Message	MSG [0]	MSG [1]	MSG [2]	MSG [3]	MSG [4]
MWS Scan Frequency Offset	BAND	FREQ [0]	FREQ [1]	FREQ [2]	FREQ [3]

The RF scan frequency is encoded in 5 bits given by the formula:

$$\text{RF\_FREQ\_OFFSET} = \text{FREQ} \cdot 10 \text{ MHz}$$

If BAND is set to “0” the RF\_FREQ\_OFFSET is the negative value from the lower edge of the ISM band. If BAND is set to “1”, RF\_FREQ\_OFFSET is the positive value from the top edge of the ISM band.

FREQ set to all “0” indicates the end of the scan period.

### MWS Priority Message (Vendor Specific)

After requesting operation by sending a real-time signaling message, the external radio can indicate the priority of the operation by sending an optional priority message. There is one two-bit priority value for Rx and Tx operation respectively. A high value indicates a high priority.

Real-Time Signaling	MSG [0]	MSG [1]	MSG [2]	MSG [3]	MSG [4]
Ext. radio to PAN9019 A(Signal)	0	MWS_TX_PRI[0]	MWS_TX_PRI[1]	MWS_RX_PRI[0]	MWS_RX_PRI[1]

### 4.5.3.2 PTA External Interface Specification

The Peripheral Interface pins are powered from the V<sub>IO</sub> voltage supply with 3.3 V or 1.8 V.

The PTA external interface and the SPI host interface share the same pins. Therefore, the PTA external interface cannot be utilized, if 802.15.4 is used.

For DC specifications please refer to [⇒ 2.2 Pin Configuration](#).

Timing specifications and a functional description of the pins are documented by the following examples.

In a first example, three lines are connected: Request, Priority (optional) and Grant. The external radio device requests to operate and indicates priority by asserting the respective lines. After all information (request and priority status) is available on the PAN9019A, it takes the time T<sub>3</sub> until the grant signal is applied. In this example, the requested operation is granted and the external radio can start its RF activity. After the operation has finished, the external radio signaled this to the PAN9019A by de-asserting the request and priority lines within T<sub>5</sub>. Finally, the PAN9019A's Packet Traffic Arbiter (PTA) de-asserts the grant (T<sub>6</sub>).

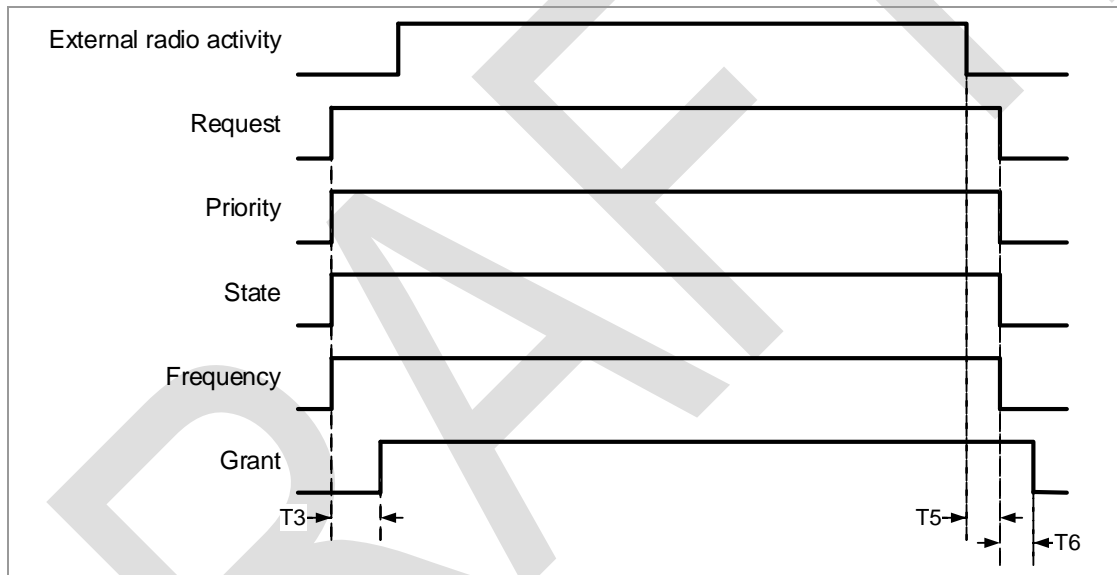

Parameter	Conditions	Min.	Typ.	Max.	Unit
T3	Time until the grant signal is activated after the priority and request information is available	0.1	-	0.4	$\mu\text{s}$
T5	De-assertion time after the end of the external radio's operation	-	-	-	$\mu\text{s}$
T6	De-assertion time of the grant signal after the request de-assertion	0.1	-	0.3	$\mu\text{s}$

By adding the optional State signal, the external radio can define, which operation it is requesting a grant for. A high signal means Tx, while a low signal means Rx. Besides this additional information, the procedure and timing are identical to the first example.

Parameter	Conditions	Min.	Typ.	Max.	Unit
T3	Time until the grant signal is activated after the priority, state and request information is available	0.1	-	0.4	μs
T5	De-assertion time after the end of the external radio's operation	-	-	-	μs
T6	De-assertion time of the grant signal after the request de-assertion	0.1	-	0.3	μs

As the second example, also the third example does not show differences in the basic function compared to the first. Instead, it adds further information about the frequency. A low level on the Frequency line indicates that the external radio requests to operate in a frequency range that does not overlap with the operation bandwidth of the PAN9019A. In contrast, a high level means that the frequencies do overlap. The signal is intended for radios that use frequency hopping and can define a non-hopping window as a coexistence mechanism.

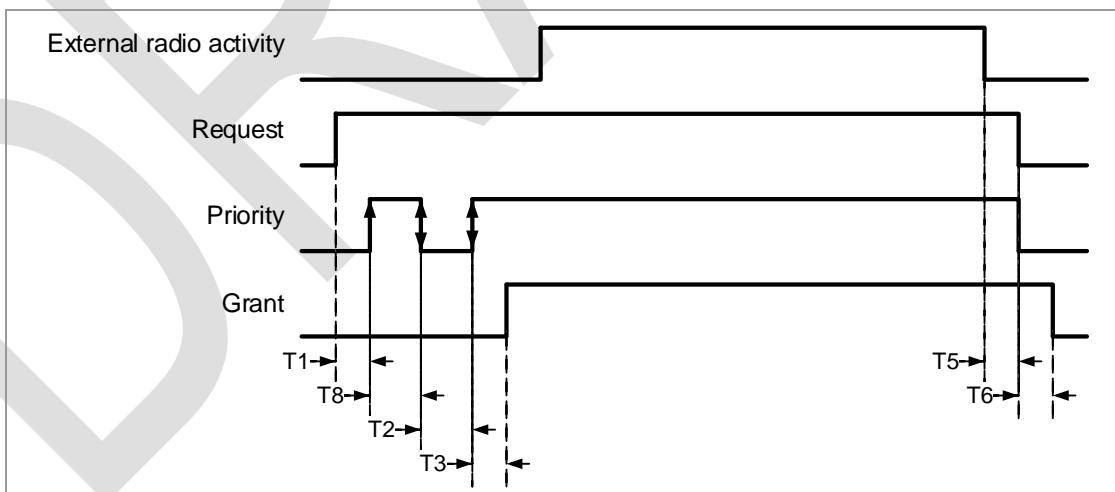

Parameter	Conditions	Min.	Typ.	Max.	Unit
T3	Time until the grant signal is activated after the priority, state, frequency and request information is available	0.1	-	0.4	μs
T5	De-assertion time after the end of the external radio's operation	-	-	-	μs
T6	De-assertion time of the grant signal after the request de-assertion	0.1	-	0.3	μs

During the operation of the external radio, the grant of operation can be withdrawn by the PAN9019A, which is illustrated in the fourth example below. In this case, the external radio must stop its radio activity. The duration T7 between the de-assertion of the grant and deactivation of the external radio is not further defined.

Parameter	Conditions	Min.	Typ.	Max.	Unit
T3	Time until the grant signal is activated after the priority and request information is available	0.1	-	0.4	μs
T7	Time from the grant de-assertion to the end of the external radio's operation	-	-	-	μs

In the fifth example, the Priority line does not contain static information about only the priority, but it is sampled up to three times, which allow to receive three informational bits. After detecting the request from the external radio, it takes T1 until the PAN9019A samples the first information bit, which is the least significant priority bit (in case of a two-bit priority) or the one-bit priority information. If a two bit priority value is used, the second bit is samples after a further duration T8. T2 defines the time from the last received priority bit to the sampling of the Tx/Rx information. T5 and T6 define the time from the end of the external radio activity to the end of the Tx/Rx information.

Parameter	Conditions	Min.	Typ.	Max.	Unit
T1	Time from the priority assertion until priority bit 0 is sampled	0	-	100	μs
T8	Optional: Priority bit 1 is sampled at T1 +T8 from Request assertion	0.025	-	100	μs
T2	Optional: Tx/Rx Info, if present on Priority pin, is sampled at T1+T2 (one priority bit on Priority pin) or T1+T8+T2 (two priority bits on Priority pin) from Request assertion.	0.025	-	100	μs
T3	Time until the grant signal is activated after the priority, Tx/Rx and request information is available	0.1	-	0.4	μs
T5	De-assertion time after the end of the external radio's operation	-	-	-	μs
T6	De-assertion time of the grant signal after the request de-assertion	0.1	-	0.3	μs

## 4.7 Reliability Tests

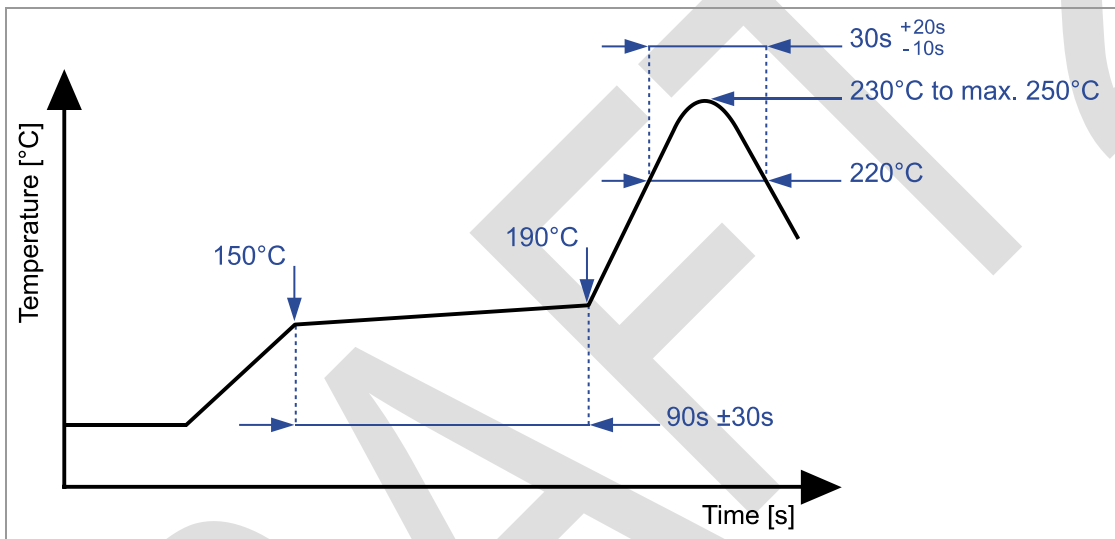

The measurements have been done after the test device has been exposed to room temperature and humidity for one hour.

No.	Item	Limit	Condition
1	Variable Vibration Test	Electrical parameters should be within specification	Freq.: 20~2 000 Hz, Acc.: 17-50 G, Sweep: 8 min, 2 hours, For: XYZ axis
2	Shock Drop Test		Drop parts on concrete from a height of 1 m for 3 times
3	Temperature Cycling Test		At -40 °C and 85 °C for 1 h/cycle Total = 300 cycles
4	Temperature Humidity Bias Test		At 60 °C, 85 % r.H., 300 h
5	Low Temperature Storage Life Test		At -40 °C, 300 h
6	High Temperature Storage Life Test		At 85 °C, 300 h

## 4.8 Recommended Soldering Profile

- Reflow permissible cycles: 2
- Opposite side reflow is prohibited due to module weight
- More than 75 percent of the soldering area shall be coated by solder
- The soldering profiles should be adhered to in order to prevent electrical or mechanical damage
- Soldering profile assumes lead-free soldering

## 5 Cautions

Failure to follow the guidelines set forth in this document may result in degrading of the module functions and damage to the module.

### 5.1 Design Notes

1. Follow the conditions written in this specification, especially the control signals of this module.
2. The supply voltage should abide by the maximum ratings (⇒ [4.2 Absolute Maximum Ratings](#)).
3. The supply voltage must be free of AC ripple voltage (for example from a battery or a low noise regulator output). For noisy supply voltages, provide a decoupling circuit (for example a ferrite in series connection and a bypass capacitor to ground of at least 47  $\mu$ F directly at the module).
4. This module should not be mechanically stressed when installed.
5. Keep this module away from heat. Heat is the major cause of decreasing the life time of these modules.
6. Avoid assembly and use of the target equipment in conditions where the module temperature may exceed the maximum tolerance.
7. Keep this module away from other high frequency circuits.
8. Refer to the recommended pattern when designing a board.

### 5.2 Installation Notes

1. Reflow soldering is possible twice based on the conditions set forth in ⇒ [4.8 Recommended Soldering Profile](#). Set up the temperature at the soldering portion of this module according to this reflow profile.
2. Carefully position the module so that the heat will not burn into printed circuit boards or affect other components that are susceptible to heat.
3. Carefully locate the module, to avoid an increased temperature caused by heat generated by neighboring components.
4. If a vinyl-covered wire comes into contact with the module, the wire cover will melt and generate toxic gas, damaging the insulation. Never allow contact between a vinyl cover and these modules to occur.
5. This module should not be mechanically stressed or vibrated when reflowed.
6. To repair the board by hand soldering, follow the conditions set forth in this chapter.
7. Do not wash this product.
8. Pressing on parts of the metal cover or fastening objects to the metal will cause damage to the module.

### 5.3 Usage Condition Notes

1. Take measures to protect the module against static electricity.  
If pulses or transient loads (a large load, which is suddenly applied) are applied to the modules, check and evaluate their operation before assembly of the final products.
2. Do not use dropped modules.
3. Do not touch, damage, or soil the pins.
4. Follow the recommended condition ratings about the power supply applied to this module.
5. Electrode peeling strength: Do not apply a force of more than 4.9 N in any direction on the soldered module.
6. Pressing on parts of the metal cover or fastening objects to the metal cover will cause damage.
7. These modules are intended for general purpose and standard use in general electronic equipment, such as home appliances, office equipment, information, and communication equipment.

### 5.4 Storage Notes

1. The module should not be stressed mechanically during storage.
2. Do not store these modules in the following conditions or the performance characteristics of the module, such as RF performance will be adversely affected:
  - Storage in salty air or in an environment with a high concentration of corrosive gas, such as Cl<sub>2</sub>, H<sub>2</sub>S, NH<sub>3</sub>, SO<sub>2</sub>, or NO<sub>x</sub>,
  - Storage in direct sunlight,
  - Storage in an environment where the temperature may be outside the range of 5 °C to 35 °C, or where the humidity may be outside the 45 % to 85 % range,
  - Storage of the modules for more than one year after the date of delivery storage period: Please check the adhesive strength of the embossed tape and soldering after 6 months of storage.
3. Keep this module away from water, poisonous gas, and corrosive gas.
4. This module should not be stressed or shocked when transported.
5. Follow the specification when stacking packed crates (max. 10).

### 5.5 Safety Cautions

These specifications are intended to preserve the quality assurance of products and individual components.

Before use, check and evaluate the operation when mounted on your products. Abide by these specifications without deviation when using the products. These products may short-circuit. If electrical shocks, smoke, fire, and/or accidents involving human life are anticipated when a short circuit occurs, provide the following failsafe functions as a minimum:

1. Ensure the safety of the whole system by installing a protection circuit and a protection device.
2. Ensure the safety of the whole system by installing a redundant circuit or another system to prevent a single fault causing an unsafe status.

## 5.6 Other Cautions

1. Do not use the module for other purposes than those listed in section [⇒ 5.3 Usage Condition Notes](#).
2. Be sure to provide an appropriate fail-safe function on your product to prevent any additional damage that may be caused by the abnormal function or the failure of the module.
3. This module has been manufactured without any ozone chemical controlled under the Montreal Protocol.
4. These modules are not intended for use under the special conditions shown below. Before using these modules under such special conditions, carefully check their performance and reliability under the said special conditions to determine whether or not they can be used in such a manner:
  - In liquid, such as water, salt water, oil, alkali, or organic solvent, or in places where liquid may splash,
  - In direct sunlight, outdoors, or in a dusty environment,
  - In an environment where condensation occurs,
  - In an environment with a high concentration of harmful gas (e. g. salty air, HCl, Cl<sub>2</sub>, SO<sub>2</sub>, H<sub>2</sub>S, NH<sub>3</sub>, and NO<sub>x</sub>).
5. If an abnormal voltage is applied due to a problem occurring in other components or circuits, replace these modules with new modules, because they may not be able to provide normal performance even if their electronic characteristics and appearances appear satisfactory.

For further information please refer to the Panasonic website [⇒ 7.3.2 Product Information](#).

## **5.7 Restricted Use**

### **5.7.1 Life Support Policy**

This Panasonic Industrial Devices Europe GmbH product is not designed for use in life support appliances, devices, or systems where malfunction can reasonably be expected to result in a significant personal injury to the user, or as a critical component in any life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

Panasonic customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Panasonic Industrial Devices Europe GmbH for any damages resulting.

### **5.7.2 Restricted End Use**

This Panasonic Industrial Devices Europe GmbH product is not designed for any restricted activity that supports the development, production, handling usage, maintenance, storage, inventory or proliferation of any weapons or military use.

Transfer, export, re-export, usage or reselling of this product to any destination, end user or any end use prohibited by the European Union, United States or any other applicable law is strictly prohibited.

## 6 Regulatory and Certification Information

### 6.1 Federal Communications Commission (FCC) for US

#### 6.1.1 FCC Notice

The PAN9019A (ENWF9511C1KF) including the antennas, which are listed in ⇒ [6.1.5 Approved Antenna List](#), complies with Part 15 of the FCC Rules.

The device meets the requirements for modular transmitter approval as detailed in FCC public Notice DA00-1407. The transmitter operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

#### 6.1.2 Caution

The FCC requires the user to be notified that any changes or modifications made to this device that are not expressly approved by Panasonic Industrial Devices Europe GmbH may void the user's authority to operate the equipment.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules.

These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

There is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna,
- Increase the separation between the equipment and receiver,
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected,
- Consult the dealer or an experienced radio/TV technician for help.

### 6.1.3 Label Requirements

The OEM must ensure that FCC labelling requirements are met. This includes a clearly visible label on the outside of the OEM enclosure specifying the appropriate Panasonic FCC identifier for this product as well as the FCC Notice above.

The FCC identifier is **FCC ID: T7V9019**.

This FCC identifier is valid for the PAN9019A. The end product must in any case be labelled on the exterior with:

"Contains FCC ID: T7V9019".

### 6.1.4 Antenna Warning

The device is tested with a standard MHF4 connector and with the antenna listed below. When integrated into the OEM's product, these fixed antennas require installation preventing end users from replacing them with non-approved antennas. Any antenna not in the following table must be tested to comply with FCC Section 15.203 for unique antenna connectors and with Section 15.247 for emissions. The FCC identifier for the device with the antenna listed in ⇒ [6.1.5 Approved Antenna List](#) is the same (**FCC ID: T7V9019**).

### 6.1.6 RF Exposure

 To comply with FCC RF Exposure requirements, the OEM must ensure that only antennas from the Approved Antenna List are installed ⇒ [6.1.5 Approved Antenna List](#).

The preceding statement must be included as a “CAUTION” statement in manuals for products operating with the approved antennas in the previous table to alert users on FCC RF Exposure compliance.

Any notification to the end user of installation or removal instructions about the integrated radio module is not allowed.

The radiated output power of the PAN9019A with one of the listed antennas (**FCC ID: T7V9019**) is below the FCC radio frequency exposure limits. The PAN9019A shall be used in such a manner that the potential for human contact during normal operation is minimized.

End users may not be provided with the module installation instructions. OEM integrators and end users must be provided with transmitter operating conditions for satisfying RF exposure compliance.

### 6.1.7 Integration Instructions

## 6.2 Innovation, Science, and Economic Development (ISED) for Canada

### English

The PAN9019A is licensed to meet the regulatory requirements of ISED.

License ID: **IC: 216Q-9019**

Manufacturers of mobile, fixed or portable devices incorporating this module are advised to clarify any regulatory questions and ensure compliance for SAR and/or RF exposure limits. Users can obtain Canadian information on RF exposure and compliance from [www.ic.gc.ca](http://www.ic.gc.ca).

This device has been designed to operate with the antennas listed in ⇒ [6.1.5 Approved Antenna List](#), having a maximum gain of 5.2 dBi for 2.4 GHz and 8.0 dBi for 5 GHz. Antennas not included in this list or having a gain greater than 5.2 dBi for 2.4 GHz and 8.0 dBi for 5 GHz are strictly prohibited for use with this device. The required antenna impedance is 50 ohms. The antenna used for this transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

Due to the model size, the IC identifier is displayed in the installation instruction only and it cannot be displayed on the module's label due to the limited size.

### French

PAN9019A est garanti conforme aux dispositions réglementaires d'Industry Canada (ISED).

License: **IC: 216Q-9019**

Il est recommandé aux fabricants d'appareils fixes, mobiles ou portables de consulter la réglementation en vigueur et de vérifier la conformité de leurs produits relativement aux limites d'exposition aux rayonnements radiofréquence ainsi qu'au débit d'absorption spécifique maximum autorisé.

Des informations pour les utilisateurs sur la réglementation Canadienne concernant l'exposition aux rayonnements RF sont disponibles sur le site [www.ic.gc.ca](http://www.ic.gc.ca).

Ce produit a été développé pour fonctionner spécifiquement avec les antennes listées dans le tableau ⇒ [6.1.5 Approved Antenna List](#), présentant un gain maximum de 5.2 dBi pour 2.4 GHz et 8.0 dBi pour 5 GHz. Des antennes autres que celles listées ici, ou présentant un gain supérieur à 5.2 dBi pour 2.4 GHz et 8.0 dBi pour 5 GHz ne doivent en aucune circonstance être utilisées en combinaison avec ce produit. L'impédance des antennes compatibles est 50 Ohm. L'antenne utilisée avec ce produit ne doit ni être située à proximité d'une autre antenne ou d'un autre émetteur, ni être utilisée conjointement avec une autre antenne ou un autre émetteur.

En raison de la taille du produit, l'identifiant IC est fourni dans le manuel d'installation.

## 6.2.1 Radio Standards Specification RSS-247 Issue 3

The Radio Standards Specification RSS-247, Issue 3, Digital Transmission Systems (DTSs), Frequency Hopping Systems (FHSs) and License-Exempt Local Area Network (LE-LAN) Devices, replaces RSS-247, Issue 2, dated February 2017. It sets out certification requirements for radio apparatus operating in the bands 2 400 MHz to 2 483.5 MHz and 5 725 MHz to 5 850 MHz employing frequency hopping, digital modulation and/or a combination (hybrid) of both techniques. It also includes license exempt local area network (LE-LAN) devices operating in the bands 5 150 MHz to 5 250 MHz, 5 250 MHz to 5 350 MHz, 5 470 MHz to 5 725 MHz and 5 725 MHz to 5 850 MHz as specified in SP-5 150 MHz.

### 6.2.1.1 General

Equipment covered by the standard RSS-247 is classified as Category I equipment. Either a technical acceptance certificate (TAC) issued by the Certification and Engineering Bureau of Innovation, Science and Economic Development Canada (ISED) or a certificate issued by a certification body (CB) is required.

### 6.2.1.2 Certification Requirements

RSS-247 shall be used in conjunction with RSS-Gen, General Requirements for Compliance of Radio Apparatus, for general specifications and information relevant to the equipment for which this standard applies. Equipment certified under the standard is required to comply with the provisions in RSS-Gen with respect to emissions falling within restricted frequency bands. These restricted frequency bands are listed in RSS-Gen.

### 6.2.1.3 Measurement Method

In addition to the requirements in RSS-Gen and the requirements of the standard RSS-247, the method for measuring DTS devices is provided in ANSI C63.10.

### 6.2.1.4 FHS and DTS Operating in the Bands 2 400 MHz to 2 483.5 MHz

This section applies to frequency hopping systems (FHSs) in the bands 2 400 MHz to 2 483.5 MHz and 5 725 MHz to 5 850 MHz and digital transmission systems (DTSs) in the band 2 400 MHz to 2 483.5 MHz. Systems in these bands can be frequency hopping, digital transmission and/or a combination (hybrid) of both types. The digital transmission technology of DTSs or hybrid systems operating in the band 5 725 MHz to 5 850 MHz shall comply with the requirement in section Technical requirements for license-exempt local area network devices and digital transmission systems operating in the 5 GHz band.

<b>Frequency Band (MHz)</b>	2 400 to 2 483.5
<b>Systems</b>	Frequency Hopping Systems (FHS)
<b>Systems out of Scope</b>	FHS operating in the band 5 725 MHz to 5 850 MHz Fixed point-to-point systems
<b>Requirements</b>	FHSs may have hopping channel carrier frequencies that are separated by 25 kHz or two thirds of the 20 dB bandwidth of the hopping channel, whichever is greater, provided that the systems operate with an output power no greater than 0.125 W.  FHSs shall use at least 15 hopping channels. The average time of occupancy on any channel shall not be greater than 0.4 seconds within a period of 0.4 seconds, multiplied by the number of hopping channels employed. Transmissions on particular hopping frequencies may be avoided or suppressed provided that at least 15 hopping channels are used.

### 6.2.1.5 Requirements for LE-LAN and DTS Operating in the 5 GHz Band

The section provides standards for Licence-Exempt Local Area Network (LE-LAN) devices operating in the bands:

- 5 150 to 5 250 MHz,
- 5 250 to 5 350 MHz,
- 5 470 to 5 600 MHz,
- 5 650 to 5 725 MHz,
- 5 725 to 5 850 MHz

For DTSs operating in the band 5 725 MHz to 5 850 MHz that employ digital modulation technology, but are not designed for LE-LAN operation.

Devices with occupied bandwidths which overlap different bands shall comply with all operational requirements for each band.

<b>RSS-247 Section</b>	6.2.1
<b>Frequency Band (MHz)</b>	5 150 to 5 250
<b>Device Type</b>	LE-LAN devices are restricted to <b>indoor operation</b> only.
<b>Devices out of Scope</b>	OEM devices installed in vehicles.
<b>Power Limits</b>	Maximum e.i.r.p. shall not exceed 200 mW or $10+10 \log_{10}B$ dBm, whichever power is less. B is the 99 % emission bandwidth in megahertz. The e.i.r.p. spectral density shall not exceed 10 dBm in any 1 MHz band.
<b>Unwanted Emission Limits</b>	For transmitters with operating frequencies in the band 5 150 MHz to 5 250 MHz, all emissions outside the band 5 150 MHz to 5 350 MHz shall not exceed -27 dBm/MHz e.i.r.p. Any unwanted emissions that falls into the band 5 250 MHz to 5 350 MHz shall be attenuated below the channel power by at least 26 dB, when measured using a resolution bandwidth between 1 % and 5 % of the occupied bandwidth (i.e. 99 % bandwidth), above 5 250 MHz. The 26 dB bandwidth may fall into the 5 250 MHz to 5 350 MHz band; if the occupied bandwidth also falls within the 5 250 MHz to 5 350 MHz band, the transmission is considered as intentional and the devices shall comply with all requirements in the band 5 250 MHz to 5 350 MHz including implementing dynamic frequency selection (DFS) and transmit power control (TPC), on the portion of the emission that resides in the 5 250 MHz to 5 350 MHz band.

<b>Device Type</b>	For devices, other than devices installed in vehicles.
<b>Devices out of Scope</b>	OEM devices installed in vehicles, outdoor fixed devices, and other devices having an e.i.r.p. greater than 200 mW.
<b>Power Limits</b>	The maximum conducted output power shall not exceed 250 mW or $11+10 \log_{10}B$ , dBm, whichever is less. The power spectral density shall not exceed 11 dBm in any 1 MHz band.
<b>Unwanted Emission Limits</b>	All emissions outside the band 5 250 MHz to 5 350 MHz shall not exceed -27 dBm/MHz e.i.r.p.; or:  All emissions outside the band 5 150 MHz to 5 350 MHz shall not exceed -27 dBm/MHz e.i.r.p. and its power shall comply with the spectral power density for operation within the band 5 150 MHz to 5 250 MHz. The device shall be labelled or include in the user manual the following text "For indoor use only."

<b>RSS-247 Section</b>	6.2.3
<b>Frequency Band (MHz)</b>	5 470 to 5 600 and 5 650 to 5 725

## 6.2.2 IC Notice

### English

The device PAN9019A ([⇒ 7.2 Ordering Information](#)), including the antennas ([⇒ 6.1.5 Approved Antenna List](#)), complies with Canada RSS-GEN Rules. The device meets the requirements for modular transmitter approval as detailed in RSS-Gen.

Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

## French

Le présent appareil PAN9019A (⇒ [7.2 Ordering Information](#)), les antennes y compris (⇒ [6.1.5 Approved Antenna List](#)), est conforme aux CNR-Gen d'Industrie Canada applicables aux appareils radio exempts de licence.

L'exploitation est autorisée aux deux conditions suivantes:

1. L'appareil ne doit pas produire de brouillage, et
2. L'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

## 6.2.3 Labeling and Documentation Requirements

### English

#### Labeling Requirements

The OEM must ensure that IC labelling requirements are met. This includes a clearly visible label on the outside of the OEM's product enclosure and inside the user manual specifying the appropriate Panasonic IC identifier for this product as well as the IC Notice above.

The IC identifier is IC: 216Q-9019.

This IC identifier is valid for all PAN9019A modules ⇒ [7.2 Ordering Information](#). In any case, the end product must be labelled on the exterior with:

"Contains IC: 216Q-9019".

In any case, the user manual must include following statement:

"This device contains IC: 216Q-9019.

This device contains licence-exempt transmitter(s)/receiver(s) that comply with Innovation, Science and Economic Development Canada's licence-exempt RSS(s). Operation is subject to the following two conditions:

1. This device may not cause interference.
2. This device must accept any interference, including interference that may cause undesired operation of the device."

**French**

**Obligations d'étiquetage**

Les fabricants d'équipement d'origine (FEO) – en anglais Original Equipment Manufacturer (OEM) – doivent s'assurer que les obligations d'étiquetage IC du produit final sont remplies. Ces obligations incluent une étiquette clairement visible à l'extérieur de l'emballage externe et dans le manuel de l'utilisateur, comportant l'identifiant IC du module Panasonic inclus, ainsi que la notification ci-dessus.

L' identifiant IC est IC: 216Q-9019.

Cet identifiant est valide pour tous les modules PAN9019A ⇒ [7.2 Ordering Information](#). Dans tous les cas les produits finaux doivent indiquer sur leur emballage externe la mention suivante:

"Contient IC: 216Q-9019".

Dans tous les cas les produits finaux doivent indiquer dans le manuel de l'utilisateur la mention suivante:

"Contient IC: 216Q-9019.

L'émetteur/récepteur exempt de licence contenu dans le présent appareil est conforme aux CNR d'Innovation, Sciences et Développement économique Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes :

1. L'appareil ne doit pas produire de brouillage.
2. L'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement."

**6.3 Conformity According to Radio Equipment Directive (RED-2014/53/EU) for Europe**

All modules described in this Product Specification comply with the standards according to the following LVD (2014/35/EU), EMC-D (2014/30/EU) together with RED (2014/53/EU) articles:

Safety/Health:	EN 62368-1: 2014/AC: 2015/A11: 2017 EN 62311: 2008 EN 62479: 2010
EMC:	EN 301 489-1 V2.2.3: 2019-11 EN 301 489-17 V3.2.4: 2020-09 EN 301 489-3 V2.1.2: 2021-03

EN 301 893 V2.1.1:2017-05

EN 300 440 V2.1.1:2017-03

- Due to the model size, the CE marking is displayed in the installation instruction only and it cannot be displayed conform to regulation (EU) No. 765/2008 in 5 mm height on the module's label due to the limited space.
- The RED EU Type Examination Certificate No. **GOM-2309-2216-V01** issued by the EU Notified Body 0681 can be used for the OEM end product conformity assessment. If a Notified Body has been contracted for the end product conformity assessment, it should be noted that this EU Type Examination Certificate should be used for conformance assessment.

As a result of the conformity assessment procedure described in 2014/53/EU Directive, the end customer equipment should be labelled as follows:

The end customer has to assure that the device has a distance of more than 20 cm from the human body under all circumstances.

The end customer equipment must meet the actual Safety/Health requirements according to RED.

PAN9019A and its model versions in the specified reference design can be used in all countries of the European Economic Area (Member States of the EU, European Free Trade Association States [Iceland, Liechtenstein, Norway]), Monaco, San Marino, Andorra, and Turkey.

### 6.3.1 Radio Equipment Directive

The Radio Equipment Directive 2014/53/EU (RED) establishes a regulatory framework for placing radio equipment on the market. It ensures a Single Market for radio equipment by setting essential requirements for safety and health, electromagnetic compatibility, and the efficient use of the radio spectrum.

The RED aligned the previous Directive, the Radio and Telecommunication Terminal Equipment Directive 1999/5/EC (R&TTED), with the new legislative framework for the marketing of products. The RED is applicable as of 2016-06-13. It included a one-year transitional period, which ended on 2017-06-12 (Article 48). On 2017-06-20, the Commission Implementing Regulation (EU) 2017/1354 was adopted. This specifies how to present the information provided for in Article 10(10) of Directive 2014/53/EU.

#### Article 10(10) RED

In cases of restrictions on putting into service or of requirements for authorisation of use, information available on the packaging shall allow the identification of the Member States or the geographical area within a Member State where restrictions on putting into service or

requirements for authorisation of use exist. Such information shall be completed in the instructions accompanying the radio equipment. The Commission may adopt implementing acts specifying how to present that information. Those implementing acts shall be adopted in accordance with the advisory procedure referred to in Article 45(2).

- **Class 1:**  
Radio equipment that can be operated without any restriction in EU, EEA, and EFTA. According to Article 8(1)b of the RED, it is clarified that no national radio interfaces specifications are required to be notified under RED;
- **Class 2:**  
Radio equipment subject to restrictions in one or more EU, EEA and EFTA countries where:
  - The technical parameters are not harmonised through EU, EEA, and EFTA;
  - The technical parameters are harmonised through EU, EEA and EFTA, and do not fall in above class 1 definition.

Radio equipment class means a class identifying particular categories of radio equipment which, under this Directive, are considered similar and those radio interfaces for which the radio equipment is designed.

### **Article 8 RED**

Notification of radio interface specifications and assignment of radio equipment classes 1:

- 1) Member States shall notify, in accordance with the procedure set out in Directive 98/34/EC, the radio interfaces which they intend to regulate except:
  - a) The radio interfaces which fully and without any deviation comply with the Commission decisions on the harmonised use of radio spectrum adopted pursuant to Decision No. 676/2002/EC; and
  - b) The radio interfaces which, in accordance with implementing acts adopted pursuant to paragraph 2 of this Article, correspond to radio equipment which can be put into service and used without restrictions within the Union.
- 2) The Commission shall adopt implementing acts establishing the equivalence between notified radio interfaces and assigning a radio equipment class, details of which shall be published in the Official Journal of the European Union. Those implementing acts shall be adopted in accordance with the examination procedure referred to in Article 45(3).

The Radio Interface Specifications Templates are provided for information in the EFIS database for applications which use is in harmonised radio spectrum, however with restrictions.

### **6.3.2 Equipment Classes**

The PAN9019A is a radio module classified as class-1 or class-2 radio equipment depending on the frequency band in which it can operate. This equipment class is passed on the end-product which integrates the module.

### Class 1

Class 1 radio equipment can be placed on the market and put into service without restrictions according to Article 1(3) of Commission Decision 2000/299/EC (Version 2018-01).

This radio module is defined as Class 1 radio equipment when it is restricted to operate in the following frequency bands:

Sub-class of Class 1	Application/Reference	Frequency Band (MHz)	Transmit Power/Power Density
22	Wideband Data Transmission Systems EN 300 328	2 400 to 2 483.5	100 mW e.i.r.p and 100 mW/100 kHz e.i.r.p. density applies when frequency hopping modulation is used, 10 mW/MHz e.i.r.p. density applies when other types of modulation are used.
54	Wireless Access Systems including Radio Local Area Networks (WAS/RLANs) EN 301 893	5 470 to 5 725	1 W mean e.i.r.p., 50 mW/MHz mean e.i.r.p. density in any 1 MHz band.
43	Non-Specific Short Range Devices EN 300 440	5 725 to 5 875	25 mW e.i.r.p.

### Class 2

Class 2 radio equipment are restricted in accordance with Article 1(3) of Commission Decision 2000/299/EC1 if the equipment falls within the scope of Class 2.

The usage of PAN9019A module in a vehicular environment cannot be considered as **indoor use**.

This radio module is also defined as Class 2 radio equipment when it is restricted to operate in the following frequency bands:

Sub-class of Class 2	Application/Reference	Frequency Band (MHz)	Transmit Power/Power Density
H01	Wireless Access Systems including Radio Local Area Networks (WAS/RLANs) <b>Restricted to indoor use</b> EN 301 893	5 150 to 5 350	Max. 200 mW mean e.i.r.p. and max. 10 mW/MHz mean e.i.r.p. density in any 1 MHz band.

## 6.4 United Kingdom Conformity According to Statutory Instrument (SI-2017/1206)

All modules described in this Product Specification comply with the designated standards according to the following Regulations: Electrical Equipment (Safety) SI 2016/1101, EMC SI 2016/1091 together with Radio Equipment Regulation 2017 (RER) SI 2017/1206:

Safety/Health: EN 62368-1: 2014/AC: 2015/A11: 2017  
EN 62311: 2008  
EN 62479: 2010

EMC: EN 301 489-1 V2.2.3: 2019-11  
EN 301 489-17 V3.2.4: 2020-09  
EN 301 489-3 V2.1.2: 2021-03

Radio: EN 300 328 V2.2.2: 2019-07  
EN 301 893 V2.1.1:2017-05  
EN 300 440 V2.1.1:2017-03

- Due to the model size, the UK marking is displayed in the installation instruction only and it cannot be displayed conform to SI 2017/1206 on the module's label due to the limited space.
- The RED EU Type Examination Certificate No. **G0M-2309-2216-V01** issued by the EU Notified Body 0681 can be used for the OEM end product conformity assessment. If a Notified Body has been contracted for the end product conformity assessment, it should be noted that this EU Type Examination Certificate should be used for conformance assessment.

As a result of the conformity assessment procedure described in SI 2017/1206 Directive, the end customer equipment should be labelled as as specified on [www.gov.uk](http://www.gov.uk).

**UK  
CA**

**Restrictions or Requirements in the UK**

The end customer has to assure that the device has a distance of more than 5 mm from the human body under all circumstances.

If the end customer application intends to use the PAN9019A in a distance smaller 5 mm from the human body, SAR evaluation has to be repeated by the OEM.

The end customer equipment must meet the actual Safety/Health requirements according to SI 2017/1206.

PAN9019A and its model versions in the specified reference design can be used in the UK.

## 6.6 Conformity According to Japanese Radio Act

This device is granted pursuant to the Japanese Radio Law (電波法).

This device should not be modified (otherwise the granted designation number will become invalid).

The following models are qualified for the Japanese market:

MIC Radio Law (RL) ID: 202-JCE028

MIC Telecommunication Business Law (TBL) ID: D 24-0008 202

Since the printable area on the PAN9019A is too small to show the MIC logo and the MIC ID, this information is placed on the package and in the user information.

The package label shows the Giteki mark and the Radio Law sign with the MIC RL and TBL IDs as depicted below:

Any product with the PAN9019A integrated and to be sold on the Japanese market has to display the following statement on the product label:

**End Product Labelling Example**

Contains MIC ID R 202-JCE028  
Contains MIC ID T D 24-008 202

## 6.7 Bluetooth Special Interest Group (SIG)

The final Bluetooth® end product listing needs to be created by using the following IDs:

Bluetooth Product	Project Name	Power Class		Model	Declaration ID	QDID
		BR/EDR	LE			
Controller Subsystem	PAN9019x Class I	1	1 and 1.5	ENWF95x1x1KF	TBD	TBD

If the module is combined with a host stack that is Bluetooth qualified as "Host Subsystem" it is possible to list an "End Product" without any further qualification tests.

### Bluetooth Marks

According to the Bluetooth SIG, the PAN9019A fulfills the criteria to label your product as a Bluetooth device:

For further information please refer to the Bluetooth website [www.bluetooth.com](http://www.bluetooth.com).

## 6.8 RoHS and REACH Declaration

The latest declaration of environmental compatibility (Restriction of Hazardous Substances, RoHS and Registration, Evaluation, Authorisation and Restriction of Chemicals, REACH) for supplied products can be found on the Panasonic website in the "Downloads" section of the respective product ⇒ [7.3.2 Product Information](#).
