## 1. KEY FEATURES

### Schlüsseleigenschaften

- short range 2,4GHz ISM band IEEE802.15.4 [1] compliant transceiver
- Complete system based on the ZigBee™ compliant platform EM250 that combines the transceiver with a powerful, efficient industry proven 16-bit microprocessor with comprehensive hardware supported network-level debugging features
- designed specifically for use with EmberZNet, Embers ZigBee compliant embedded mesh networking
- powerful 16-bit microprocessor
- 128k flash ROM and 5k of SRAM memory
- high Rx sensitivity of -97dBm at 1% Packet Error Rate
- 3dBm Tx maximum output power with power control over 20dB range
- Small size 20mm x 26,5mm x 3,0mm
- single port antenna terminal (pcb pad, U.FL socket or chip antenna versions available)
- Integrated ADC module with 12-bit resolution
- two 16-bit general purpose timers; one 16-bit sleep timer
- 17 GPIO pins with alternate functions
- two sleep modes for increased battery life
- low voltage detect/reset
- complies with ETSI EN300 328 and FCC part 15

## 2. APPLICATIONS FOR THE MODULE

### Anwendungen für das Modul

- ZigBee™ FFD (full functional) and RFD (reduced functional) devices working in star and mesh networks
- Wireless sensor and actuator networks
- Remote control and wire replacement in industrial systems
- Building automation and control
- Inventory and logistics management
- HID (Human Interface Devices)
- Toys
- Home gateways

### 3. DESCRIPTION OF THE MODULE

#### Beschreibung des Moduls

PAN4570 contains the single chip EM250 [2] from Ember Inc., a 24MHz reference crystal and RF frontend circuitry optimized for best RF performance. As single ended RF output the module is available with integrated antenna or 50ohms or U.FL male socket [3] or 50 ohms pad terminal on the bottom of the module.

Two additional hardware options are available on request:

#### 3.1. ON BOARD DC REGULATOR

Although the EM250 already contains a dc regulator internally, the module can be requested with an extra onboard linear low dropout (LDO) regulator. Some applications could benefit from this additional regulator because as of for example:

- (1) Further extension of the input voltage range or
- (2) Extended battery life by replacing the regulator within EM250 by a special ultra low quiescent current regulator or
- (3) allowing for operation on very noisy power supplies

#### 3.2. ON BOARD REFERENCE CRYSTAL

A second option that is available is an on board 32,768kHz crystal reference. This option is provided for applications that require a precision reference clock.

Where a precision 32,768kHz reference is already available on the applicationboard, it could be fed to pin 4 instead and this option is not needed.

Please contact the manufacturer if one of the options could be useful for your product design.

PAN4570 is used for ZigBee™ ([www.zigbee.org](http://www.zigbee.org)) applications working with EmberZNet™ of Ember Inc. ([www.ember.com](http://www.ember.com)). EmberZNet™ is a fully ZigBee™ compliant networking stack. For code development Insight Desktop™, a comprehensive integrated development environment (IDE) and C-language compiler toolchain from Ember Inc. is required. Insight Desktop™ is part of Ember development kits and can currently be purchased together with programming adaptors as EM250 jumpstart kit at a price of USD 2500,- directly from Ember Inc. ([www.ember.com](http://www.ember.com)).

When using ZigBee™ technology for a product the following additional costs have to be taken into account:

1. Membership of the ZigBee™ alliance, as least as adopter member for US\$ 3500,-.
2. The cost of a ZigBee™ product certification at a testhouse (TÜV Rheinland) ranges from approximately US\$ 4000,- to US\$ 10000,-, depending on the implemented software.
3. Products qualifying for ZigBee™ certification at the ZigBee™ alliance need a logo

administration fee of USD 1000,- for the first product, and USD 500,- for each additional product.

For more details on ZigBee™ software see also part 21.

#### 4. SCOPE OF THIS DOCUMENT Umfang dieses Dokumentes

This product specification applies to the ZigBee ready modem ENWCZA0xyzE. The characters xyz indicate different versions (refer to part 22 Ordering Information). The used chip is the EM250 from the US company Ember Inc. [www.ember.com](http://www.ember.com).

Diese Produktionsunterlagen beziehen sich auf das ZigBee ready Modem ENWCZA0xyzE. Die Zeichen xyz bezeichnen verschiedene Versionen (Erklärung im Kapitel 25 Ordering Information). Der verwendete ZigBee Chip ist EM250 der US Firma Ember Inc..

- (4) In case the dc regulator option is mounted REG\_OUT is connected to the regulator option output instead and the internal regulated core voltage is not accessible
- (5) In case the dc regulator option is mounted as regulator, use the REG\_EN signal from EM250 (GPIO7) and connect it to REG\_EN pin 46 and to an external high ohmic pull-up resistor tied to VBAT. The purpose is that during deep sleep the open collector output of REG\_EN EM250 can disable the active-high enabled regulator in order to maintain low deep sleep currents.

### 13. A/D CONVERTER CHARACTERISTICS

No	Item	
1	ATD characteristics	refer to datasheet EM250 part 5.5 ADC Module
2	ATD timing/performance characteristics	refer to datasheet EM250 part 5.5 ADC Module

### 14. AC ELECTRICAL CHARACTERISTICS

VBAT = 3.0V, T<sub>amb</sub> = 25°C, measured at 50Ω terminal load at pin 38 RF or U.FL socket, for all channels number 11, 12, ..., 26 according to [1]

No	Receiver	Limit			Unit
		Min	Typ	Max	
1	Sensitivity for 1% Packet Error Rate (PER)	-85	-96	-	dBm
2	Sensitivity for 1% Packet Error Rate (PER) (boost mode)	-85	-97	-	dBm
3	Saturation (maximum input level for correct operation, low gain)	0	-	-	dBm
4	Adjacent Channel Rejection (1% PER and desired signal -82dBm acc. to [1])		35		dB
5	Alternate Channel Rejection (1% PER and desired signal -82dBm acc. to [1])		40		dB
6	Channel Rejection for all other channels (1% PER and desired signal -82dBm acc. to [1])		40		dB
7	802.11g rejection centered at +12MHz or -13MHz (1% PER and desired signal -82dBm acc. to [1])		40		dB
8	Co-channel rejection (1% PER and desired signal -82dBm acc. to [1])		-6		dBc
9	Relative frequency error (2x40ppm required by [1])	-120		120	ppm
10	Relative timing error (2x40ppm required by [1])	-120		120	ppm
11	Linear RSSI range	40			dB
12	Spurious Emissions <1GHz	-	TBD	-57	dBm
13	Spurious Emissions >1GHz	-	TBD	-47	dBm

## 18. LABELING DRAWING

Kennzeichnung des Moduls durch Label

Imprint Aufdruck	Description Beschreibung
ENWCZA0xyzE	This is the ordering code from Panasonic, details could be found under chapter 25.
Date Code	Production Date Code in the format YYMMDD, e.g. 060602
02	Indication for software revision for our final test, customer are able to flash there own software.
01ES	Indication for the hardware revision, ES indicates the ES status, will be removed after MP ready.
0000001	Indication for the serial number.
(FCC ID: T7VEM250A)	This is the FCC ID in future, should be labelled only after FCC approval.
2D-Barcode	Information in the 2D-Barcode are the serial number [7 signs], the ENW-Part-Number [11 signs], identifier for the software release [2 signs], the identifier for the hardware release [2 signs] and the production date code in the format Year-Month-Day [6 signs], separated by a semicolon. The IEEE802.15.4 MAC Address [12 characters] are stored in the Ember IC EM250, therefore it could not be on the label, but must be stored in the final test report to have a reference between MAC address and serial number.

## 19. MECHANICAL REQUIREMENTS

Mechanische Anforderungen

No.	Item Punkt	Limit Grenzwerte	Condition Bedingung
1	Solderability Lötbarkeit	More than 75% of the soldering area shall be coated by solder Mehr als 75% der Lötfläche soll mit Lötpaste bedeckt sein.	Reflow soldering with recommendable temperature profile
2	Resistance to soldering heat	It shall be satisfied electrical requirements and not be mechanical damage	Please see chapter 15.2

## 20. RECOMMENDED LAND PATTERN Empfohlenes Land Pattern

Dimensions in mm.

The land pattern dimensions above can serve as a guidance, but this information is given without any legal responsibility.

We recommend the use of the same pad dimensions for the solder paste screen as for the copper pads, but slight different measures and shapes of the solder paste screen cutouts might be optimum depending on your soldering process, for example on the chosen solder paste screen thickness. The solder screen thickness depends on your soldering technology, we recommend 120µm to 150µm.

### IMPORTANT:

The bottom side of PAN4570 is fully coated, nevertheless no copper, such as through hole vias, planes or tracks on your board component layer should be located below PAN4570 in order to avoid short cuts. In cases where a track or through hole via has to be located under the module it has to be kept away from PAN4570 via holes. The PAN4570 multilayer pcb contains a inner rf shielding ground plane, therefore no pcb copper plane directly below PAN4570 is needed.

If the integrated antenna version of PAN4570 is used, it has to be mounted on a board with a full copper plane layer of at least 50mm x 50mm, else the radiation performance is degraded. Place the antenna on the edge of your carrier board and avoid conductive or shielding parts other than the carrier board in the near of the integrated antenna.

## 21. SOFTWARE

### Software

#### Software tools

In order to develop code and ZigBee™ networks the Ember Insight Desktop Development Environment is required. This environment works with the preceding EM2420, the EM250 and the upcoming EM260. For code development it comprises the Integrated Development Environment (IDE) named xIDE based on eclipse 3.1.0 for editing, compiling and debugging of C–applications. In addition network visualization and debugging tools are included.

For programming the Ember Insight Adapter is required. This adaptor has to be linked to the computer where the Ember Insight Desktop is installed on over an Ethernet

network connection. Before connecting PAN4570 to the Ember Insight Adaptor study the latest Ember Insight Adaptor documentation. The following pins of PAN4570 have to be connected to the signals on the debug connector of the Ember Insight adaptor:

PAN4570 pin	PAN4570 signal name	Insight Adapter signal name
various	ground	ground
1 <sup>(6)</sup>	VBAT	3.0Vdc
3	RESET	RSTB
25	SIF_CLK	SIF_CLK
26	SIF_MISO	SIF_MISO
27	SIF_MOSI	SIF_MOSI
28	SIF_LOADB	SIF_LOADB
as packet trace interface (PTI) also connect the following signals:		
10	GPIO4	GPIO4
11	GPIO5	GPIO5

(6) only if the Ember Insight Adaptor is set to powering the target device PAN4570

#### Ember ZigBee™ Stack

EmberZNet (currently version 2.2) is the ZigBee stack provided with EM250. It supports as networking topologies true mesh, star and cluster networks. As ZigBee devices ZigBee Coordinator, ZigBee Full Functional Device and ZigBee End Devices are supported.

For the ease of application programming EmberZNet is controlled by the application over API commands. Direct ZigBee APS layer APIs are provided for applications that require low level ZigBee control.

According to [1] each ZigBee device has a unique address. This address is supplied with PAN4570 in a file containing a table with serial numbers and addresses.

For more information on the items above see the website of Ember Inc. ([www.ember.com](http://www.ember.com)) and the documentation included in the Ember Insight Desktop package as part of the Ember development kits.

## 22. RELIABILITY TESTS

### Zuverlässigkeitstests

The measurement should be done after exposed to room temperature and humidity for 1 hour.

Die Messungen sollten erst nach einer Stunde Lagerung unter normalen Bedingungen erfolgen.

No.	Item Punkt	Limit Grenzwerte	Condition Bedingung
1	Vibration test	Electrical parameter should be in specification	a) Freq.:10~50Hz,Amplitude:1.5mm a) 20min. / cycle,1hrs. each of XYZ axis b) Freq.:30~100Hz, 6G b) 20min. / cycle,1hrs. each of XYZ axis
2	Shock test	the same as the above	Dropped onto hard wood from height of 50cm for 3 times
3	Heat cycle test	the same as the above	-40°C for 30min. and +85°C for 30min.; each temperature 300 cycles
4	Moisture test	the same as the above	+60°C, 90% RH, 300h
5	Low temp. test	the same as the above	-40°C, 300h
6	High temp. test	the same as the above	+85°C, 300h

## 23. PACKAGING

### Verpackung

Will be finalized in the next revisions.

## 24. APPLICATION NOTES

### Applikationshinweise

#### 24.1. CAUTIONS FOR SAFETY

##### Sicherheitshinweise

These specifications are intended to preserve the quality assurance of products as individual components.

Before use, check and evaluate their operation when mounted on your products. Abide by these specifications, without deviation when using the products. These products may short-circuit. If electrical shocks, smoke, fire, and/or accidents involving human life are

HIGH FREQUENCY PRODUCTS DIVISION Module Business PANASONIC ELECTRONIC DEVICES (EUROPE) GmbH	APPROVED genehmigt	CHECKED geprüft	DESIGNED erstellt
--	-----------------------	--------------------	----------------------

CLASSIFICATION Einstufung	PRODUCT SPECIFICATION Produktspezifikation	No. DS-4570-2400-102	REV. 04
SUBJECT Thema	MODEM FOR IEEE802.15.4 (ZIGBEE) "ZigBee" Modem" (IEEE802.15.4)	PAGE Seite	21 of 27
CUSTOMER'S CODE PAN4570	PANASONIC'S CODE ENWCZA0xyzE	DATE Datum	31.07.2006

anticipated when a short circuit occurs, then at least, provide the following failsafe functions, as a minimum.

- (1) Ensure the safety of the whole system by installing a protection circuit and a protection device.
- (2) Ensure the safety of the whole system by installing a redundant circuit or another system to prevent a single fault causing an unsafe status.

## 24.2. DESIGN ENGINEERING NOTES

### Designhinweise

Heat is the major cause of shortening the life of these products. Avoid assembly and use of the target equipment in conditions where the products' temperature may exceed the maximum allowable.

Failure to do so may result in degrading of the product's functions and damage to the product.

If pulses or other transient loads (a large load applied in a short time) are applied to the products, then before use, check and evaluate their operation when assembled on your products.

Carefully position the products so that their heat will not burn into printed circuit boards or affect the other components that are susceptible to heat.

Carefully locate these products so that their temperatures will not increase due to the effects of heat generated by neighboring components.

If a vinyl-covered wire comes into contact with the products, then the cover will melt and generate toxic gas, damaging the insulation. Never allow contact between the cover and these products to occur.

These products are intended for general purpose and standard use in general electronic equipment, such as home appliances, office equipment, information and communication equipment.

These products are not intended for other uses, other than under the special conditions shown below. Before using these products under such special conditions, check their performance and reliability under the said special conditions carefully to determine whether or not they can be used in such a manner.

- (1) In liquid, such as water, salt water, oil, alkali, or organic solvent, or in places where liquid may splash.
- (2) In direct sunlight, outdoors, or in a dusty environment
- (3) In an environment where condensation occurs.
- (4) In an environment with a high concentration of harmful gas (e.g. salty air, HCl, Cl<sub>2</sub>, SO<sub>2</sub>, H<sub>2</sub>S, NH<sub>3</sub>, and NO<sub>x</sub>)

If an abnormal voltage is applied due to a problem occurring in other components or circuits, replace these products with new products because they may not be able to provide normal performance even if their electronic characteristics and appearances appear satisfactory.

Mechanic stress during assembly on board and operation has to be avoided.

Pressing on parts of the metal cover or fastening objects to the metal cover is not allowed.

### 24.3. STORAGE CONDITIONS

#### Lagerbedingungen

The module may not be stressed mechanically during storage.

Do not store these products in the following conditions or the performance characteristics of the product, such as RF performance will be adversely affected:

- (1) Storage in salty air or in an environment with a high concentration of corrosive gas, such as Cl<sub>2</sub>, H<sub>2</sub>S, NH<sub>3</sub>, SO<sub>2</sub>, or NOX
- (2) Storage in direct sunlight
- (3) Storage in an environment where the temperature may be outside the range of 5°C to 35°C range, or where the humidity may be outside the 45 to 85% range.
- (4) Storage of the products for more than one year after the date of delivery at your company if all the above conditions (1) to (3) have been avoided.

### 25. ORDERING INFORMATION

Ordering part number	Description	MOQ <sup>(7)</sup>
ENWCZA02A3E <sup>(8)</sup>	Engineering Sample PAN4570 PAN4570 with integrated ceramic antenna (U.FL socket will not be mounted, when the module is in mass production)	1
ENWCZA03N2E <sup>(8)</sup>	Engineering Sample PAN4570 PAN4570 with U.FL male socket (ceramic antenna will not be mounted, when the module is in mass production)	1
ENWCZA04N4E <sup>(8)</sup>	Engineering Sample PAN4570 PAN4570 with RF out on a SMD pad (U.FL plug and ceramic antenna will not be mounted, when the module is in mass production)	1

#### Notes:

- (7) Abbreviation for Minimum Order Quantity (MOQ)
- (8) As long as the module has engineering status, the sign ES are available on the label. The "Z" in the ordering part number indicates the engineering sample status. After mass production the "Z" will be changed to the "9" and the ES sign on the label will be deleted.

## 26. ROHS DECLARATION

### RoHS-Erklärung

Declaration of environmental compatibility for supplied products:

Hereby we declare to our best present knowledge based on declaration of our suppliers that this product do not contain by now the following substances which are banned by Directive 2002/95/EC (RoHS) or if contain a maximum concentration of 0,1% by weight in homogeneous materials for

- Lead and lead compounds
- Mercury and mercury compounds
- Chromium (VI)
- PBB (polybrominated biphenyl) category
- PBDE (polybrominated biphenyl ether) category

And a maximum concentration of 0,01% by weight in homogeneous materials for

- Cadmium and cadmium compounds

## 27. DATA SHEET STATUS

### Datenblatt Status

This data sheet contains data from the PRELIMINARY specification. Supplementary data will be published at a later date. Panasonic Electronic Devices (Europe) GmbH reserves the right to change the specification without notice, in order to improve the design and supply the best possible product.

Please consult the most recently issued data sheet before initiating or completing a design.

## 28. REGULATORY INFORMATION

### 28.1. FCC NOTICE

The device PAN4570, including the ceramic antenna (ENWC9A02A3E) complies with Part 15 of the FCC Rules. The device meets the requirements for modular transmitter approval as detailed in FCC public Notice DA00-1407.transmitter

Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesired operation.

### 28.2. CAUTION

The FCC requires the user to be notified that any changes or modifications made to this device that are not expressly approved by Panasonic Electronic Devices Europe GmbH may void the user's authority to operate the equipment.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help

### 28.3. LABELING REQUIREMENTS

The Original Equipment Manufacturer (OEM) must ensure that FCC labeling requirements are met. This includes a clearly visible label on the outside of the OEM enclosure specifying the appropriate Panasonic FCC identifier for this product as well as the FCC Notice above. The FCC identifier are **FCCID: T7VEM250A**. This FCC identifier is only valid for the part number ENWC9A02A3E (PAN4570 with mounted ceramic antenna). For details, please see the chapter 25. Ordering Information.

The EUT is labelled with FCC ID: T7VEM250A. This Label must be visible for the user in the end product. If the module is inside of an end product, the label will not be visible. In this case the end product will be labelled exterior with "Contains FCC ID: T7VEM250A"

CUSTOMER'S CODE PAN4570	PANASONIC'S CODE ENWCZA0xyzE	DATE Datum	31.07.2006

#### 28.4. ANTENNA WARNING

The related part number for this device is ENWC9A03N2E (PAN4570 with mounted connector). For details, please see the chapter 25. Ordering Information. This device will be tested with an UFL connector from company Hirose and with the antennas listed below. When integrated in the OEMs product, these fixed antennas require installation preventing end-users from replacing them with non-approved antennas. Any antenna not in the following table must be tested to comply with FCC Section 15.203 for unique antenna connectors and Section 15.247 for emissions. The FCC identifier for this device will be available, after a first measurement with an approved antenna.

#### 28.5. APPROVED ANTENNA LIST

Note: We are able to qualify your antenna and will add to this list as that process is completed.

Item	Part Number	Manufacturer	Frequency Band	Type	Gain (dBi)
1					
2					

#### 28.6. RF EXPOSURE PAN4570

To comply with FCC RF Exposure requirements, the Original Equipment Manufacturer (OEM) must ensure that the approved antenna in the previous table must be installed and/or configured to operate with a separation distance of 2.5cm or more from all persons to satisfy RF Exposure compliance.

The preceding statement must be included as a CAUTION statement in manuals for products operating with the approved antennas in the previous table to alert users on FCC RF Exposure compliance.

Any notification to the end user of installation or removal instructions about the integrated radio module is not allowed.

The radiated output power of PAN4570 with mounted ceramic antenna (FCC ID: T7VEM250A) is far below the FCC radio frequency exposure limits.

Nevertheless, the PAN4570 shall be used in such a manner that the potential for human contact during normal operation is minimized.

The EUT meets the requirements of FCC section 15.249, even if the EUT transmitted at the maximum allowed field strength (50,000 uV/m), which the equivalent e.i.r.p would be 0.75 mW. End users may not be provided with the module installation instructions. OEM integrators and end users must be provided with transmitter operating conditions for satisfying RF exposure compliance.

### 30. GENERAL INFORMATION

#### Allgemeine Informationen

© Panasonic Electronic Devices (Europe) GmbH 2006.

All rights reserved.

This product description does not lodge the claim to be complete and free of mistakes.

Please contact the related product manager in every case.

If we deliver samples to the customer, these samples have the status Engineering Samples. This means, the design of this product is not yet concluded. Engineering Samples may be partially or fully functional, and there may be differences to be published Data Sheet.

Engineering Samples are not qualified and are not to be used for reliability testing or series production.

#### **Disclaimer:**

Customer acknowledges that samples may deviate from the Data Sheet and may bear defects due to their status of development and the lack of qualification mentioned above.

Panasonic Electronic Devices (Europe) GmbH rejects any liability or product warranty for Engineering Samples. In particular, Panasonic Electronic Devices (Europe) GmbH disclaims liability for damages caused by

- the use of the Engineering Sample other than for Evaluation Purposes, particularly the installation or integration in an other product to be sold by Customer,
- deviation or lapse in function of Engineering Sample,
- improper use of Engineering Samples.

Panasonic Electronic Devices (Europe) GmbH disclaims any liability for consequential and incidental damages. In case of any questions, please contact your local sales partner or the related product manager.

### 31. LIFE SUPPORT POLICY

#### Politik für Lebenserhaltungssysteme

This Panasonic Electronic Devices (Europe) GmbH product is not designed for use in life support appliances, devices, or systems where malfunction can reasonably be expected to result in a significant personal injury to the user, or as a critical component in any life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness. Customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Panasonic Electronic Devices (Europe) GmbH for any damages resulting.
