**1- Switch Core Label**

The Switch Core has the FCC and IC numbers printed on the PCB in Silk Screen. Because the PCB is very small, the serial number is written on a 2D bar code label. The Hardware revision is written on this label.

The information written on the PCB it is visible inside the Switch Core when the coin-cell battery is removed. This operation can be done by the customer. It was not possible to place this FCC/IC information on the outside of the unit without seriously impacting the appearance of the product.
