Exhibit 10- Tune up procedure PAU

1 2.1033(c)(9) Tune-Up Procedure

All the necessary adjustments will be set in the factory, and no adjustments are needed. The Base Station Controller (BSC) remotely controls the maximum output power level. If the Power Amplifier Unit is not able to maintain the requirements for power output, frequency stability, etc an alarm is sent to the BSC. On severe faults the Power Amplifier Unit will disable transmission.
