## Permissible Change measurements on RUS 01 B4 1700/2100 MHz radio equipment with FCC ID: TA8AKRC11859-1 and IC: 287AB-AS118591 (8 appendices)

### Test object

RUS 01 B4, product KRC 118 59/1, revision R2B

### Summary

Appendix 1 describes the test object and set-ups during test.

Appendix 8 presents photos of the test object.

Standard		Compliant	Appendix	Remarks
<b>FCC CFR 47 / IC RSS-139 Issue 2</b>				
2.1046 / RSS-139 6.4	RF power output	Yes	2	-
2.1049 / RSS-139 6.5	Occupied bandwidth	Yes	3	-
2.1051 / RSS-139 6.5	Band edge	Yes	4	-
2.1051 / RSS-139 6.5	Spurious emission at antenna terminals	Yes	5	-
2.1053 / RSS-139 6.5	Field strength of spurious radiation	Yes	6	-
<b>FCC CFR 47 / IC RSS-Gen Issue 2</b>				
15.111 / RSS-Gen 4.10	Receiver spurious emissions	Yes	7	-

Note: Above RSS-139 items are given as cross-reference only. Measurements were performed according to ANSI procedures referenced by FCC and covered by SP's accreditation.

Appendix 1

### Description of test object

Equipment:	Radio equipment RUS 01 B4 1700/2100 MHz running in LTE mode.
Frequency bands:	TX: 2110 – 2155 MHz RX: 1710 – 1755 MHz
Highest and lowest configurable EARFCNs per tested 3GPP bandwidth configuration are specified below	
Supported channel bandwidth configurations	1.4 MHz, 3 MHz, 5 MHz, 10 MHz, 15 MHz and 20 MHz according 3GPP TS 36.141 section 5.6
Modulation and access scheme OFDMA in FDD	
OFDM subcarrier modulation	System information and pilots use BPSK and QPSK. For payload data QPSK, 16QAM and 64QAM is used.
Maximum rated output power:	Single carrier 1x 47.8 dBm (1x60 W)
Number of antenna ports:	TX/RX: 1
Nominal power voltage:	-48 VDC

### Tested frequencies and EARFCNs for TX measurements

EARFCN	Frequency / [MHz]	Comment
1957	2110.7	TX bottom (B) frequency in 1.4 MHz BW configuration
1965	2111.5	TX bottom (B) frequency in 3 MHz BW configuration
2025	2117.5	TX bottom (B) frequency in 15 MHz BW configuration
2050	2120.0	TX bottom (B) frequency in 20 MHz BW configuration
2175	2132.5	TX band mid (M) frequency, all BW configurations
2300	2145.0	TX top (T) frequency in 20 MHz BW configuration
2325	2147.5	TX top (T) frequency in 15 MHz BW configuration
2385	2153.5	TX top (T) frequency in 3 MHz BW configuration
2393	2154.3	TX top (T) frequency in 1.4 MHz BW configuration

### Tested frequencies and EARFCN for RX measurement

RX spurious emissions conducted were measured at the RX band center frequency in 1.4 MHz channel bandwidth configuration only.

EARFCN	Frequency / [MHz]	Comment
20175	1732.5	RX band center frequency (M)

Note: EARFCN are derived according 3GPP TS 36.141, table 5.7.3-1.  
The TX-RX EARFCN-offset is 18000.

# REPORT

Date 2010-10-05 Reference FX015926-F27 Page 2 (7)

FCC ID: TA8AKRC11859-1  
IC: 287AB-AS118591

Appendix 1

## Operation modes during measurements

Measurements were performed with the test object transmitting test models as defined in 3GPP TS 36.141. Test model E-TM1.1 was used to represent QPSK, test model E-TM3.2 to represent 16QAM and test model E-TM3.1 to represent 64QAM payload modulation.

The TX setting with test model E-TM1.1 in channel bandwidth configuration 1.4 MHz was found to be representative for all traffic scenarios when several settings with different modulations and channel bandwidth configurations were compared to find a worst case setting. All measurements were performed with the test object configured for maximum transmit power. These settings were used for all measurements unless noted otherwise.

## Conducted measurements

The EUT was mounted into a RBS 6201 cabinet and supplied by the cabinet's internal -48 V DC. TX parameters were measured at port RF A with port RF B terminated into 50 ohm. RX spurious emission conducted was measured at port RF B with port RF A activated with E-TM1.1 in channel BW configuration 1.4 MHz on the TX band center frequency (M). Port RF A was terminated into 50 ohm.

## Radiated measurements

The test object was tested stand-alone and supplied by functional test equipment with -48 VDC. The active port RF A was terminated into 50 ohm outside the test chamber. Port RF B was in stand-by mode and terminated into 50 ohm directly at the port.

## Purpose of test

The purpose of the test is to justify a Class II permissive change. The test object was earlier filed with support for channel BW configurations 5 MHz and 10 MHz only. The updated product additionally supports channel BW configurations 1.4 MHz, 3 MHz, 15 MHz and 20 MHz. This report verifies maintained performance characteristics by testing the updated equipment in the new channel BW configurations against relevant parts of FCC CFR 47, IC RSS 139 and IC RSS-Gen.

## RF power output measurements according to 47 CFR 2.1046 / IC RSS-139 6.4

Date	Temperature	Humidity
2010-09-27	22 °C ± 3 °C	40 % ± 5 %
2010-09-28	22 °C ± 3 °C	40 % ± 5 %

### Test set-up and procedure

The test object was connected to a power analyzer measuring peak and RMS output power in CDF mode.

Measurement equipment	SP number
Boonton RF Peak power meter/analyzer	503 144
Boonton Power sensor 56518-S/4	503 146
RF attenuator	900 229
Testo 635 temperature and humidity meter	504 203

**Measurement uncertainty:** 0.7 dB

### Results

Measured output power level at connector RF A

Nominal voltage:

Test conditions $T_{\text{nom}}$ 22 °C / $V_{\text{nom}}$ -48.0 V DC	Transmitter power RMS (dBm) / PAR (dB)		
	B Frequency	M Frequency	T Frequency
BW configuration 1.4 MHz	48.1 / 7.0	48.0 / 7.1	48.0 / 7.0
BW configuration 3 MHz	48.1 / 6.8	48.1 / 6.9	48.0 / 6.9
BW configuration 15 MHz	47.9 / 6.7	47.9 / 6.7	47.7 / 6.7
BW configuration 20 MHz	47.9 / 6.7	47.9 / 6.7	47.7 / 6.8

### Limits

§27.50 The maximum output power may not exceed 1640 W (EIRP) / MHz.  
The Peak to Average Ratio (PAR) may not exceed 13 dB.

RSS-139: The average equivalent isotropically radiated power (e.i.r.p.) limits in SRSP-513 apply, resulting in a maximum EIRP of 1640 W / MHz for the scope of this report. The peak-to-average ratio of the power shall not exceed 13 dB.

Complies?	Yes

Date	Temperature	Humidity
2010-09-27	22 °C ± 3 °C	40 % ± 5 %
2010-09-28	22 °C ± 3 °C	40 % ± 5 %

### Test set-up and procedure

The measurements were made per definition in 27.53 (h). The test object was connected to a spectrum analyzer with the RMS detector activated. The spectrum analyzer was connected to an external 10 MHz reference standard during the measurements.

The limit was adjusted to compensate for the used reduced measurement bandwidth pursuant to the FCC rules, specifying a RBW of at least 1% of the fundamental emission bandwidth up to 1 MHz away from the band edges and a RBW of 1 MHz for measurements of emissions more than 1 MHz away from the band edges. For band edge offsets > 1 MHz the limit to apply was calculated as

$$\text{Adjusted limit} = \{-13 - 10 * \log(1000 / \text{RBW[kHz]})\} \text{ dBm}$$

Measurement equipment	SP number

### Test set-up and procedure

The measurements were made per definition in §24.238. The output was connected to a spectrum analyzer. The spectrum analyzer was connected to an external 10 MHz reference standard during the measurements. A pre-measurement was performed with the PEAK detector activated. Emission close to or above the limit with the PEAK detector is measured with the RMS detector activated and the level of the emission is determined with the substitution method.

Measurement equipment	SP number
R&S FSQ	504 143
RF attenuator	900 229
High pass filter	504 200
Testo 635 temperature and humidity meter	504 203

**Measurement uncertainty:** 3.7 dB

### Results

Diagram	BW configuration / [MHz]	Frequency
1	1.4	B
2	20	B
3	1.4	M
4	3	M
5	15	M
6	20	M
7	1.4	T
8	20	T

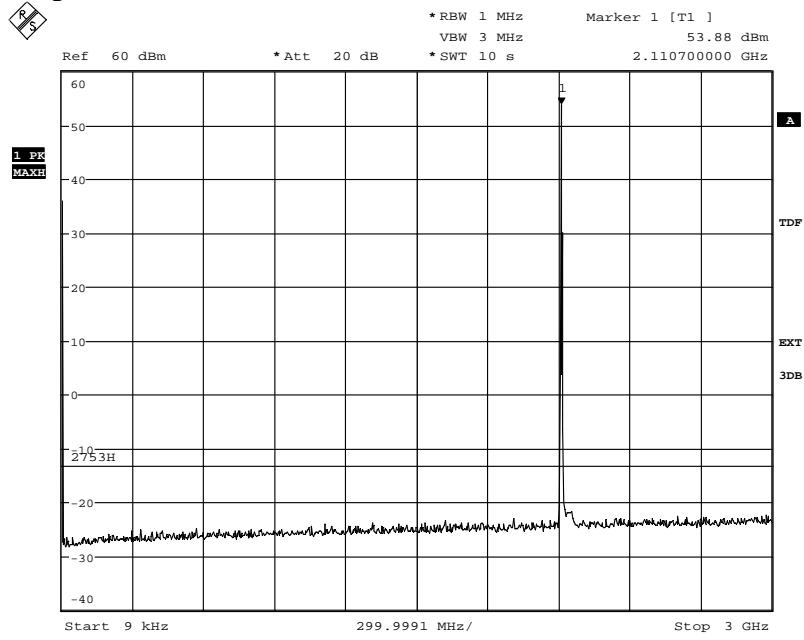

The diagrams are shown in appendix 5.1

### Limits

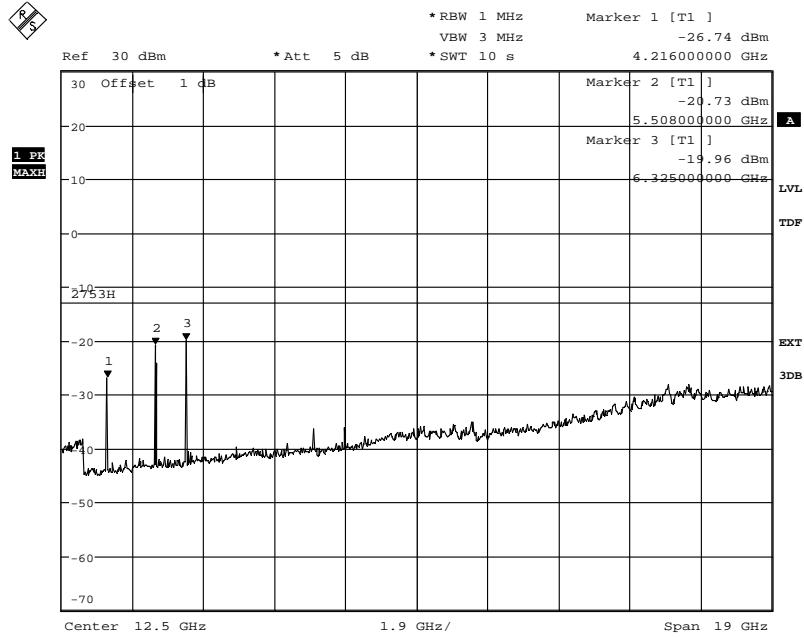

The power of any emission outside the frequency band shall be attenuated below the transmitter power (P) by at least  $43 + 10 \log P$  dB.

Complies?	Yes

## Field strength of spurious radiation measurements according to 47 CFR 2.1053 / IC RSS-139 6.5

Date	Temperature	Humidity
2010-09-21	23 °C ± 3 °C	44 % ± 5 %
2010-09-22	23 °C ± 3 °C	40 % ± 5 %
2010-09-23	23 °C ± 3 °C	42 % ± 5 %

### Test set-up and procedure

The test sites are listed at FCC, Columbia with registration number: 93866. The test site complies with RSS-Gen, Issue 2, Industry Canada file no.:IC 3482A-1.

The measurements were performed with both horizontal and vertical polarisation of the antenna. The antenna distance was 3 m in the frequency range 30 MHz – 18 GHz and 1m in the frequency range 18-22 GHz.

A pre-measurement was first performed:

In the frequency range 30 MHz-20 GHz the measurement was performed in power with a RBW of 1 MHz. A propagation loss in free space was calculated. The used formula was,

$$\gamma = 20 \log\left(\frac{4\pi D}{\lambda}\right), \quad \gamma \text{ is the propagation loss and } D \text{ is the antenna distance.}$$

The measurement procedure was as the following:

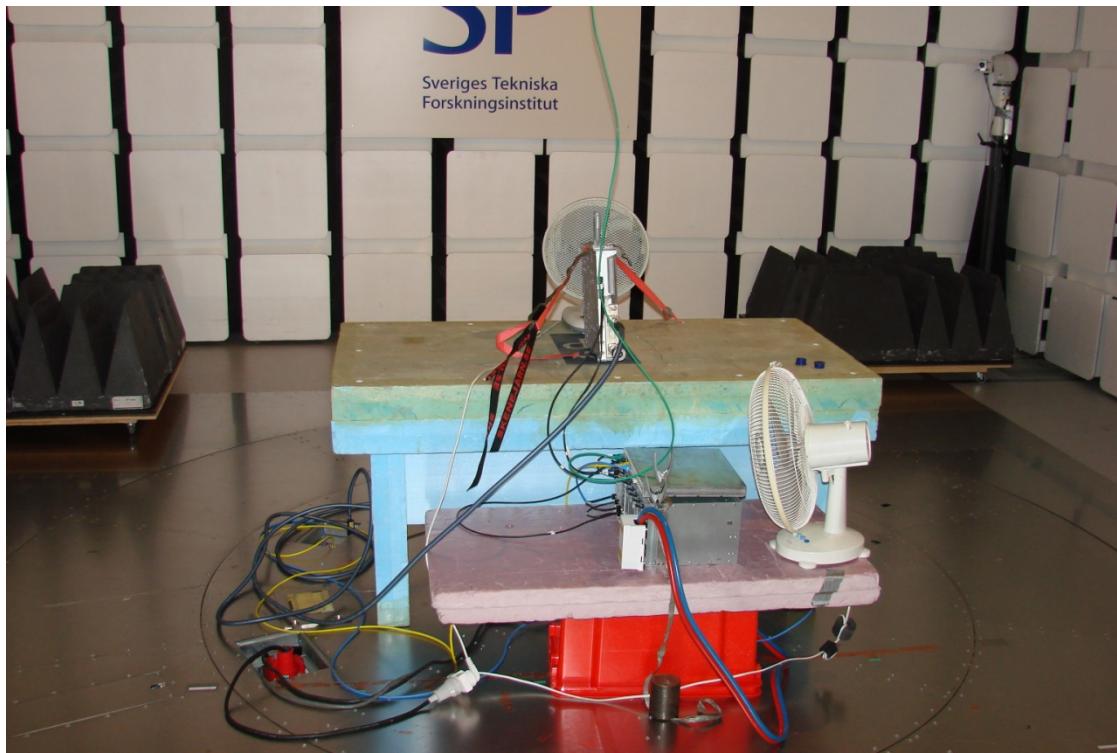

1. The pre-measurement was first performed with peak detector. The EUT was measured in eight directions and with the antenna at three heights, 1.0 m, 1.5 m and 2.0 m.
2. Spurious radiation on frequencies closer than 20 dB to the limit is scanned 0-360 degrees and the antenna is scanned 1-4 m for maximum response. The emission is then measured with the average detector and the average value is reported, frequencies closer than 10 dB to the limit measured with the average detector was measured with the substitution method according to the standard.

Measurement equipment	SP number
Test site Tesla	503 881
R&S ESI 26	503 292
Control computer	503 479
Software: R&S EMC32, ver. 8.20.1	-
Chase Bilog antenna CBL 6111A	503 182
MITEQ Low Noise Amplifier	504 160
EMCO Horn Antenna 3115	502 175
Standard gain antenna 20240-20	503 674
RLC Electronics, high pass filter	503 739
Testo 625 temperature and humidity meter	504 188

FCC ID: TA8AKRC11859-1  
IC: 287AB-AS118591

## Appendix 6

The test set-up during the spurious radiation measurement is shown in the picture below:

Note: The fans are required for thermal relief. The equipment lacks sufficient passive cooling capacity when tested stand-alone outside a RBS cabinet.

## Results

Frequency (MHz)	Spurious emission level (dBm)	
	Vertical	Horizontal
30-22 000	All emission > 20 dB below limit	All emission > 20 dB below limit

## Measurement uncertainty:

3.2 dB up to 18 GHz, 3.6 dB above 18 GHz

## Limits

The power of any emission outside the frequency band shall be attenuated below the transmitter power (P) by at least  $43 + 10 \log P$  dB.

Complies?	Yes

Appendix 7

## Receiver spurious emissions measurements according to 47 CFR 15.111 and RSS-Gen Issue 2

Date 2010-09-27	Temperature 22 °C ± 3 °C	Humidity 40 % ± 5 %
--------------------	-----------------------------	------------------------

### Test set-up and procedure

The measurements were performed according to ANSI C63.4.

Measurements were performed on port “RF B”. The measurement was first performed with peak detector. Emission on frequencies close to or above the limit was re-measured with quasi-peak detector below 1 GHz and with average detector above 1GHz.

During the measurement at the receiver port “RF B” the combined TX/RX port “RF A” was terminated into 50 ohm. The TX was active at maximum power at the TX band center frequency with test model E-TM1.1 in channel bandwidth configuration 1.4 MHz.

Measurement equipment	SP number
R&S FSQ40	504 143
RF attenuator	900 229
Testo 635 Temperature and humidity meter	504 203

### Result

The results are shown in appendix 7.1:

The nominal RX frequency was 1732.5 MHz.

Diagram 1      Tested port, frequency range  
                  RX B, 9 KHz – 1 GHz  
Diagram 2      RX B, 1 GHz – 11 GHz

### Remarks

The emission at 9 kHz on the plot was not generated by the test object. A complementary measurement with a smaller RBW showed that it was related to the LO feed-through.

It was deemed sufficient to measure RX conducted emissions with only the worst case TX configuration. The upper frequency bound 11 GHz was chosen to cover 5x 2155 MHz, the upper TX frequency band edge and client declared highest frequency.

### Limit

The power of any spurious output signals appearing at the antenna terminals must not exceed -57 dBm (2 nanowatt).

Emission below limit?	Yes
