## TEST REPORT

Intertek Testing Services Shanghai  
Building No.86, 1198 Qinzhou Road (North)  
Caohejing Development Zone  
Shanghai 200233, China

Telephone: 86 21 6127 8200  
[www.intertek.com](http://www.intertek.com)

Report no.: 200100100SHA-001

**Applicant:** Ericsson AB  
Isafjordsgatan 10 SE-164 80 Stockholm 16480 Sweden

**Manufacturer:** Ericsson AB  
Isafjordsgatan 10 SE-164 80 Stockholm 16480 Sweden

**FCC ID:** TA8BKRD901160

### SUMMARY:

The equipment complies with the requirements according to the following standard(s) or Specification:

**FCC CFR 47 Part 96: CITIZENS BROADBAND RADIO SERVICE**

### PREPARED BY:

Victor Yang

Project Engineer  
Victor Yang

### REVIEWED BY:

Jackson Huang

**TEST REPORT****Revision History**

Report No.	Version	Description	Issued Date
200100100SHA-001	Rev. 01	Initial issue of report	January 6, 2020
200100100SHA-001	Rev. 01	This report is an amendment report of 200100100SHA-001, new antenna was added and tested.	December 7, 2021

**TEST REPORT****Measurement result summary**

TEST ITEM	FCC REFERENCE	RESULT
Power, PSD and Peak to Average Power Ratio	96.41(b)(c)(g) 2.1046	Pass
Occupied Bandwidth	96.41(e)(3) 2.1049	Pass
Unwanted Emissions at Band Edge	96.41(e)(1) 2.1051	NA <sup>1</sup>
Conducted Unwanted Emission	96.41(e)(2) 2.1051	NA <sup>1</sup>
Radiated Unwanted Emissions	96.41(e)(1)(2) 2.1053	NA <sup>1</sup>
Frequency Stability	- 2.1055	NA <sup>1</sup>

Note 1: There is no test needed for adding new antenna.

**TEST REPORT****1 GENERAL INFORMATION****1.1 Description of Equipment Under Test (EUT)**

Description:	Remote Radio Unit
Product name:	AIR 6488 B48
Product number:	KRD 901 160/1, KRD 901 160/11, KRD 901 160/2, KRD 901 160/21
Serial Number(s)	CF89393564
Rating:	-48V DC
Software Version:	PIS: N/A, UP: CXP2030020/5_R63B21
Hardware Version:	R2A
Sample received date:	November 21, 2021
Date of test:	November 21, 2021 ~ November 29, 2021

Note: The differences between the 4 variants are as below, and others are same.

KRD 901 160/2 (with un-security software and RDNB board for testing purpose).

KRD 901 160/21 (with security software and RDNB board for testing purpose).

KRD 901 160/1 (with un-security software and antenna).

KRD 901 160/11 (with security software and antenna).

**TEST REPORT****1.2 Technical Specification**

Frequency Range:	3550MHz - 3700MHz
Number of Antenna ports:	64 TX/RX
Supported RAT:	TDD LTE
Max RF bandwidth (IBW):	100MHz
Supported Number of Carriers:	Maximum 3 carriers
Supported modulation:	QPSK, 16QAM, 64QAM, 256QAM
Supported Channel Bandwidth:	10MHz, 20MHz
ITU Designation of Emission:	10M0F9W, 20M0F9W
Output Power:	For antenna 22.5dBi Maximum 20dBm (100mW) per port for 20MHz channel bandwidth, Maximum 17dBm (50mW) per port for 10MHz channel bandwidth. For antenna 23.2dBi Maximum 19.25dBm (84mW) per port for 20MHz channel bandwidth, Maximum 16.25dBm (42mW) per port for 10MHz channel bandwidth.
Antenna Gain:	22.5dBi & 23.2dBi

**TEST REPORT****1.3 Description of Test Facility**

Name:	Intertek Testing Services Shanghai
Address 1:	Building 86, No. 1198 Qinzhou Road(North), Shanghai 200233, P.R. China
Address 2:	No. 5 Lize East Street, Ericsson Tower, Chaoyang District, Beijing 100102 P.R.C.
Telephone:	+86 21 61278200
Telefax:	+86 21 54262353
The test facility is recognized, certified, or accredited by these organizations:	FCC Accredited Lab Designation Number: CN1175, CN1258
	IC Registration Lab CAB identifier.: CN0051
	A2LA Accreditation Lab Certificate Number: 3309.02, 3309.04

### 2.2 Product Information

The Equipment Under Test (EUT) AIR 6488 B48 is an Ericsson Radio Unit working in the public mobile services 3550-3700MHz band which provides communication connections to 3550-3700MHz network. The Radio AIR 6488 B48 operates from a -48V DC power supply.

The EUT includes 64 TX/RX ports. It can be configured to transmit in MU-MIMO mode with up to a maximum of 16 beams, and the MU-MIMO mode was used for measurements as the worst configuration. The complete testing was performed with the EUT transmitting at maximum RF power unless otherwise stated.

A full technical description can be found in the Manufacturer's documentation.

**TEST REPORT****2.3 Configuration Description**

All of the configurations from single user beam to 16 users beam were checked, the 16 users beam power was found to be higher than any other number of user beam configurations, and hence was tested and reported.

Initial pre-testing was carried out to determine the worst modulation scheme by measuring the output power from QPSK, 16QAM, 64QAM and 256QAM on the middle channel of one antenna port. From these tests, it was determined that QPSK was the worst modulation scheme and was used for all testing.

Complete testing was carried out on the worst antenna port which was determined by the highest output power from the 64 measured ports on worst case modulation scheme and worst bandwidth. The worst antenna port was antenna port 42.

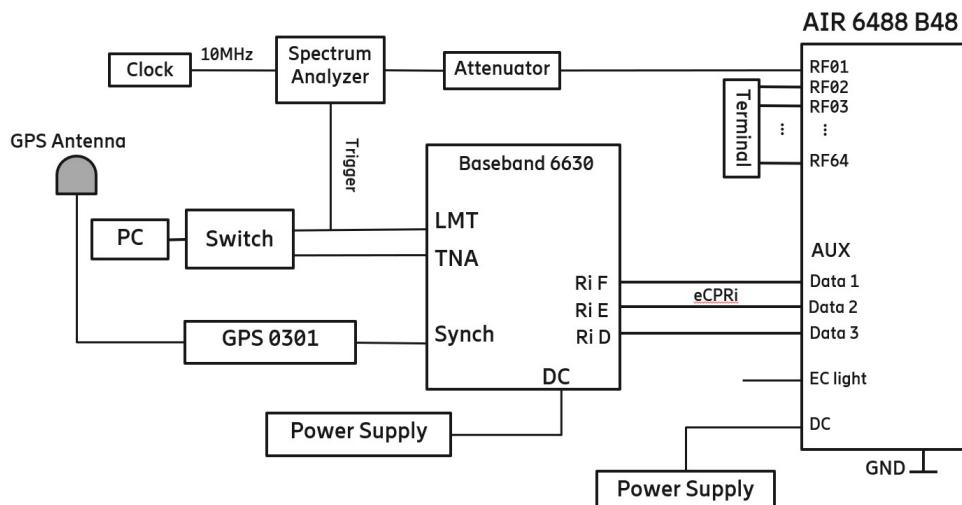

The settings below were used for all measurements unless otherwise noted:

Configuration	Carrier	Carrier Bandwidth	Carrier Frequency Configuration (MHz)		
			Bottom	Middle	Top
LTE-MIMO-1C-10	1C	10MHz	3555	3625	3695
LTE-MIMO-1C-20	1C	20MHz	3560	3625	3690
LTE-MIMO-2C-10-1	2C	10MHz	3685 + 3695		
LTE-MIMO-2C-10-2	2C	10MHz	3605 + 3695		
LTE-MIMO-2C-20-1	2C	20MHz	3670 + 3690		
LTE-MIMO-2C-20-2	2C	20MHz	3610 + 3690		
LTE-MIMO-3C-10-1	3C	10MHz	3675 + 3685 + 3695		
LTE-MIMO-3C-10-2	3C	10MHz	3605 + 3615 + 3695		
LTE-MIMO-3C-20-1	3C	20MHz	3650 + 3670 + 3690		
LTE-MIMO-3C-20-2	3C	20MHz	3610 + 3630 + 3690

**TEST REPORT****2.7 Measurement uncertainty**

The measurement uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

Test item	Measurement uncertainty
Maximum output power	0.73dB
Occupied Bandwidth	0.88%
Unwanted Emissions at Band Edge	3.03dB
Conducted Unwanted Emission	3.03dB
Radiated Unwanted Emissions below 1GHz	4.90dB
Radiated Unwanted Emissions above 1GHz	5.02dB
Frequency stability	$0.77 \times 10^{-7}$

**TEST REPORT****3 Power, PSD and Peak to Average Power Ratio**

**Test result:** Pass

**3.1 Limit**

Power limits:

Maximum effective isotropic radiated power (EIRP): 47dBm/10MHz

Maximum Power Spectral Density (PSD): 37dBm/MHz

Peak to Average Ratio:  $\leq 13$  dB

**3.2 Measurement Procedure**

The EUT was configured to transmit on maximum power and proper modulation. Measurements were performed with a Spectrum Analyzer using the Band Power measurement function. The detector was set to RMS with an RBW of at least 1% of the carrier bandwidth and a VBW of at least 3 times the RBW. The integration bandwidth was configured to be 10MHz as defined in 96.41(b). Where the carrier width was greater than 10MHz, the integration bandwidth was moved to the region with the highest PSD to find the maximum band power.

For PSD measurements in a 1MHz bandwidth, an RMS detector was used with a single sweep. The highest PSD was established over the entire emission bandwidth and the result recorded.

CCDF measurements were carried out in accordance with ANSI C63.26 Clause 5.2.3.4.

**TEST REPORT**

### 3.3 Test Notes

1. All of the configurations from single user beam to 16 users beam were checked, the 16 users beam power was found to be higher than any other number of user beam configurations, and hence was tested and reported.
2. The MIMO conducted power is measured for signal with respect to the Occupied Bandwidth (OBW) in MHz. The value has to be scaled to per 10MHz in order to compare it with the FCC EIRP Limit defined in units dBm/10MHz. Scaling Factor (dB) =  $10 \log_{10}(\text{OBW} / 10\text{MHz})$

Sample Calculation for an Occupied Bandwidth = 20MHz is shown as follows:

$$\text{Scaling Factor} = 10 \log_{10}(10\text{MHz} / 20\text{MHz}) = 10 \log_{10}(0.5) = -3.01\text{dB}$$

3. 16-beam reduction:

The 16-beam reduction is applicable in the 16-User Beam operating mode of the EUT. It is a logarithmic factor applied to account for maximum 16 spatially separated beams operate simultaneously.

$$16\text{-beam power reduction factor (dB)} = 10 \log_{10}(1/16) = -12.04\text{ dB}$$

4. Antenna Gains (dBi) are provided by the client.

5. Sample Calculation:

Let us assume the following numbers:

- a. MIMO Conducted Power for Port 0 to 63 as 6400mW.
- b. Occupied Bandwidth = 20MHz
- c. Antenna Gain = 22.5dBi

<b>Factors</b>		<b>Value</b>	<b>Unit</b>
MIMO Conducted Power (linear sum) for Port 0-63		6400	mW
MIMO Conducted Power (dBm) for Port 0-63	= $10 \log_{10}(6400)$	38.06	dBm
Scaling Factor (OBW = 20MHz)	= $10 \log_{10}(10 / 20)$	-3.01	dB
<b>Applying Reductions:</b>			
Antenna Gain		22.5	dBi
16-Beam Reduction	= $10 \log_{10}(1 / 16)$	-12.04	dB
		45.51	dBm/ 10MHz
<b>MIMO EIRP =</b>			
MIMO Conducted Power for Port 0-63 + Scaling Factor + Antenna Gain + 16-Beam Reduction			
FCC EIRP Limit	=	47	dBm/ 10MHz
Margin = MIMO EIRP - FCC EIRP Limit	=	1.49	dB

**TEST REPORT**

### 3.4 Measurement result

LTE-MIMO-1C-10:

Antenna Port	Modulation	Carrier Bandwidth (MHz)	Power / PSD / Peak-to-Average Ratio (PAR)

**TEST REPORT****4 Occupied Bandwidth**

**Test result:** Pass

**4.1 Measurement Procedure**

The EUT was set to transmit at maximum power and testing was carried out on bottom, middle and top channels. Using the Occupied Bandwidth measurement function in the spectrum analyzer, the 99% and 26dB bandwidth was measured in accordance with FCC KDB 971168 D01 Clause 4.2.

## 5 Unwanted Emissions at Band Edge

**Test result:**      NA

### 5.1 Limit

Except as otherwise specified in paragraph (e)(2) of this section, for channel and frequency assignments made by the SAS to CBSDs, the conducted power of any emission outside the fundamental emission (whether in or outside of the authorized band) shall not exceed -13 dBm/MHz within 0-10 megahertz above the upper SAS-assigned channel edge and within 0-10 megahertz below the lower SAS-assigned channel edge. At all frequencies greater than 10 megahertz above the upper SAS assigned channel edge and less than 10 MHz below the lower SAS assigned channel edge, the conducted power of any emission shall not exceed -25 dBm/MHz.

### 5.2 Measurement Procedure

All measurements were made according with KDB 971168 D01.

For MIMO mode configurations, the limit was adjusted with a correction of -18.06dB [10Log(1/64)] by using the Measure and Add 10Log(N) dB technique according to KDB 662911 D01 Multiple Transmitter Output accounting for simultaneous transmission from antenna ports .

In the 1 MHz bands immediately outside and adjacent to the frequency block, a resolution bandwidth of at least one percent of the emission bandwidth of the fundamental emission of the transmitter may be employed and a RBW of 1MHz for measurements of emissions > 1MHz away from the band edges.

Spectrum analyzer detector was set as RMS.

### 5.3 Measurement result

**TEST REPORT****6 Conducted Unwanted Emission**

**Test result:**      NA

**6.1 Limit**

The conducted power of any emissions below 3530 MHz or above 3720 MHz shall not exceed -40dBm/MHz.

**6.2 Measurement Procedure**

All measurements were made according with KDB 971168 D01.

For MIMO mode configurations, the limit was adjusted with a correction of -18.06dB [10Log(1/64)] by using the Measure and Add 10Log(N) dB technique according to KDB 662911 D01 Multiple Transmitter Output accounting for simultaneous transmission from antenna ports .

The detector of the Spectrum analyzer was set as RMS, the RBW was set as 1MHz, the VBW was set as 3MHz.

**6.3 Measurement result**

**TEST REPORT****7 Radiated Unwanted Emission**

**Test result:**      NA

**7.1 Limit**

The field strength of the carrier has been calculated assuming that the power is to be fed to a half-wave tuned dipoles as per 2.1053 (a).

$$E(V/m) = (30 \times G_i \times P_o)^{0.5} / d$$

Where

$G_i$  is the antenna gain of ideal half-wave dipoles,

$P_o$  is the power out of the transceiver in W,

d is the measurement distance in meter.

As per FCC Part 96, at all frequencies greater than 10 megahertz above the upper SAS assigned channel edge and less than 10 MHz below the lower SAS assigned channel edge, the conducted power of any emission shall not exceed -25 dBm/MHz. In addition, the power of any emissions below 3530 MHz or above 3720 MHz shall not exceed -40dBm/MHz.

Therefore, the limit at 3m measurement distance is:

$E(V/m) = 72.4 \text{ dB}\mu\text{V/m}$  for the emissions of frequencies greater than 10 megahertz above the upper SAS assigned channel edge and less than 10 MHz below the lower SAS assigned channel edge.

$E(V/m) = 57.4 \text{ dB}\mu\text{V/m}$  for the emissions below 3530 MHz or above 3720 MHz.

**7.2 Measurement Procedure**

This measurement is carried out in semi-anechoic chamber.

A preliminary profile of the Spurious Radiated Emissions was obtained by operating the EUT on a remotely controlled turntable within the chamber. Measurements of emissions from the EUT were obtained with the measurement antenna in both horizontal and vertical polarizations.

Emissions identified within the range 30MHz to 40GHz were then formally measured using a peak detector as the worst case.

The EUT was measured with the antenna height varied between 1 and 4 m with the turntable rotated between 0 and 360 degrees.

**7.3 Measurement result**

**TEST REPORT**

## 8 Frequency Stability

**Test result:** NA

### 8.1 Limit

The frequency stability shall be sufficient to ensure that the fundamental emissions stay within the authorized bands of operation.

### 8.2 Measurement Procedure

#### Temperature Variation

The EUT was tested over the temperature range -30°C to +50°C in 10°C steps with -48 VDC Power Supply. At each temperature step, the Base Station was configured to transmit at maximum power on the middle channel of the operating band.

#### Voltage Variation

The EUT was tested at the supplied voltages varied from 85 to 115 percent of the nominal values of -48 VDC. At +20°C, the Base Station was configured to transmit at maximum power on the middle channel of the frequency block.

### 8.3 Measurement result

\*\*\*\*\* END \*\*\*\*\*
