

## Cavotec Micro-control AS

### APPLICATION FOR FCC LIMITED MODULAR APPROVAL (LMA)

Cavotec Micro-control as (CMC) is hereby applying for FCC modular approval for MC-CD-PPL-458 and MC-CD-TRX-458 transceiver modules under FCC ID: TB8MC-CD-458. This transceiver modules are to be used in several of our industrial remote control products. CMC is familiar with and uses the rules and regulations stated in DA 00-1407 as a guide to the design and installation of this transceiver module into the final host platform.

The difference between MC-CD-PLL-458 and MC-CD-TRX-458 is only how they interface with other electronics. The two modules uses different BUS protocols when communication with the systems "main board". Apart from that, the two modules both uses the STD-302N-R 458MHz with identical surrounding components to make them identical regarding their RF characteristics.

Sincerely,

A handwritten signature in dark ink, appearing to read "G. Paulsen", is written over a horizontal dashed line.
