2. System Test Configuration

2.1 EUT Configuration

The EUT configuration for testing is installed on RF field strength measurement to meet the Commissions requirement and operating in a manner which intends to maximize its emission characteristics in a continuous normal application.

2.2 EUT Exercise

The Transmitter was operated in the normal operating mode link mode with GSM/GPRS Base station. the Tx frequency was fixed which was for the purpose of the measurements with max output power level..

2.3 Test Procedure

Maximum Permissible Exposure (MPE) measurement:

In accordance with ANSI 63.4:2003, the EUT is a placed on as turn table which is 1 m above ground plane. The turn table shall rotate 360 degrees to determine the position of maximum emission level. EUT is set 20 cm away from the receiving probe In order to find out the max. emission, the ambient temperature of the actual EUT was maintained within the range of 10 to 40 C unless the particular equipment requirements specify testing over a different temperature range, unless otherwise indicated, the humidity levels where in the range of 10% to 90% relative humidity.

2.4 Limitation

Frequency Range (MHz)	Electric Field Strength (V/m)	Magnetic Field Strength (A/m)	Power Density (mW/cm ²)	Averaging Time (minute)
Limits for General Population/Uncontrolled Exposure				
0.3-1.34	614	1.63	*(100)	30
1.34-30	824/f	2.19/f	*(180/f ²)	30
30-300	27.5	0.073	0.2	30
300-1500	/	/	F/1500	30
1500-15000	/	/	1.0	30

F = frequency in MHz

* = Plane-wave equipment power density

3. Description of test modes

The EUT has been tested under normal operating link mode with GSM/GPRS Base Station. condition. the Tx frequency was fixed which was for the purpose of the measurements with max output power level.

The GSM 850 channel 128 (channel Lowest) which has the max conducted power level was chosen for testing and reported.

The results shown in this test report refer only to the sample(s) tested unless otherwise stated. This test report cannot be reproduced, except in full, without prior written permission of the Company.

4. Maximum Permissible Exposure (MPE) Measurement

4.1.Measurement Procedure:

1. The following measurements were performed with a field probe using
2. The EUT's radiating element (antenna) was placed on a 1 m tall table for ease of testing. For equipment normally operated on a metal surface, a ground plane was used.
3. The remaining equipment necessary to operate the EUT was maintained at a distance from the measurement arrangement suitable to minimize interference with the measurements.
4. With the EUT operating at maximum power, a search was initiated for worst case emissions with the probe raised and lowered over a range of 0.2 to 2 meters in height and over a horizontal plane of 0o to 360o.
