Dear Helen,

I checked them all again in Tx mode only until 1GHz but there is not a available test data other than the test data written on the first test report.

Please refer the attached new test reports.

Thanks,

Jay Kim

Subject: GE Security, FCC ID: TCZGE313 , Assessment NO.: AN05T5203, Notice#1

Question #1: Based upon FCC15.33(4), "If the intentional radiator contains a digital device, regardless of whether this digital device controls the functions of the intentional radiator or the digital device is used for additional control or function purposes other than to enable the operation of the intentional radiator, the frequency range shall be investigated up to the range specified in paragraphs (a)(1)-(a)(3) of this section or the range applicable to the digital device, as shown in paragraph (b)(1) of this Section, whichever is the higher frequency range of investigation."

However the test report shows transmission mode was tested upto 1.25MHz only, which should be upto 1GHz instead. Please provide additional test data.

Best Regards,
Helen Zhao

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information within 30 days of the original e-mail date may result in application dismissal and forfeiture of the filing fee. Also, please note that partial responses increase processing time and should not be submitted. Any questions about the content of this correspondence should be directed to the e-mail address listed below the name of the sender.
