

Re: FreeLinc FCC ID: TDA-FDM300, Model FDM-300

Date: September 21, 2009

From: Met Labs

1. The carrier situated at 13.95MHz has part of the 20dB bandwidth outside the 14.010MHz band edge.

The plot being referred to is an Industry Canada 99% BW plot that uses different measurement parameters than FCC 15.225. On page 9 of the test report it can clearly be seen that the 20 dB BW is well within the frequency range of measurement when the correct measurement parameters are used.

2. Manual missing 15.19 statement - please update.
