## 4 FCC §15.247 (i) \& §2.1091- RF Exposure

### 4.1 Applicable Standard

According to FCC $\S 15.247(\mathrm{i})$ and $\S 1.1307$ (b)(1), systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines.

Limits for General Population/Uncontrolled Exposure

| Frequency <br> Range <br> $\mathbf{( M H z )}$ | Electric Field <br> Strength <br> $(\mathbf{V} / \mathbf{m})$ | Magnetic Field <br> Strength <br> $(\mathbf{A} / \mathbf{m})$ | Power Density <br> $\left(\mathbf{m W} / \mathbf{c m}^{2}\right)$ | Averaging Time <br> (minutes) |
| :---: | :---: | :---: | :---: | :---: |
| Limits for General Population/Uncontrolled Exposure |  |  |  |  |
| $0.3-1.34$ | 614 | 1.63 | $*(100)$ | 30 |
| $1.34-30$ | $824 / \mathrm{f}$ | $2.19 / \mathrm{f}$ | $*\left(180 / \mathrm{f}^{2}\right)$ | 30 |
| $30-300$ | 27.5 | 0.073 | 0.2 | 30 |
| $300-1500$ | $/$ | $/$ | $\mathrm{f} / 1500$ | 30 |
| $1500-100,000$ | $/$ | $/$ | 1.0 | 30 |

$\mathrm{f}=$ frequency in MHz

* = Plane-wave equivalent power density

### 4.2 MPE Prediction

Predication of MPE limit at a given distance, Equation from OET Bulletin 65, Edition 97-01

$$
\mathbf{S}=\mathbf{P G} / 4 \pi \mathbf{R}^{2}
$$

Where: $\mathrm{S}=$ power density
$\mathrm{P}=$ power input to antenna
$\mathrm{G}=$ power gain of the antenna in the direction of interest relative to an isotropic radiator
$\mathrm{R}=$ distance to the center of radiation of the antenna

### 4.3 MPE Results

$$
\begin{aligned}
& \text { Maximum peak output power at antenna input terminal (dBm): } \quad \underline{18.35} \\
& \text { Maximum peak output power at antenna input terminal (mW): } \quad \underline{68.39} \\
& \text { Prediction distance (cm): } \quad \underline{20} \\
& \text { Prediction frequency (MHz): } \underline{2440} \\
& \text { Maximum Antenna Gain, typical (dBi): } \underline{2.0} \\
& \text { Maximum Antenna Gain (numeric): } \underline{1.585} \\
& \text { Power density of prediction frequency at } 20.0 \mathrm{~cm}\left(\mathrm{~mW} / \mathrm{cm}^{2}\right): \quad \underline{0.022} \\
& \text { MPE limit for uncontrolled exposure at prediction frequency }\left(\mathrm{mW} / \mathrm{cm}^{2}\right): \quad \underline{0.22}
\end{aligned}
$$

The device is compliant with the requirement MPE limit for uncontrolled exposure.
