Re: Modular Transmitter Approval
FCC ID: TFB-SISENI
IC: 5969A-SISENI

To Whom it May Concern:

The following information is being provided per the requirements of 15.212 regarding modular approval of Part 15 devices:

This transceiver is a complete RF module with an integral reference oscillator.

External connections are provided for power and data communication.

The following numbered items correspond to similarly numbered paragraphs in 15.212. Each item is a response to the requirements of that document.

1. The module has integral RF shielding to isolate it from surrounding equipment and the larger environment in general.
2. All inputs are processed as data by the on-board microcontroller. The outside user has no direct control of transmit modulation.
3. The on board microcontroller monitors the input supply voltage and prevents the transmitter from operating if the input voltage is detected to be above 3.5 volts.
4. There are two antenna options with this module, (1) LSR 080-0002 dipole and LSR 080-0001 U.FL to Reverse Polarity SMA Cable or (2) Antenna Factor ANT-916-CW-HWR-RPS and PanguTech JQ-0036-L4 MMCX to Reverse Polarity SMA Cable. This is in accordance with Part 15.203.
5. The module was tested in a stand-alone configuration and found to be compliant with Part 15 regulations.
6. An FCC ID label is affixed to each unit at the time of manufacture. Information is also clearly presented in the user guide about labeling requirements for the final assembly.
7. This unit is compliant with Part 15.247. Installation and other requirements are presented in the user guide to allow the unit to be correctly installed.
8. The unit is compliant with the RF exposure requirements of Parts 15.247 and 2.1091.

Further information may be obtained from LS Research, LLC.

Sincerely,

William Steinike
