

TIRE VITALS

Fine tuned by Orange Electronic

TPMS

FCC Notice

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

FCC Caution: To assure continued compliance, any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment. (Example - use only shielded interface cables when connecting to computer or peripheral devices).

FCC Radiation Exposure Statement

This equipment complies with FCC RF radiation exposure limits set forth for an uncontrolled environment.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

FCC Notice

This system is the use of wireless tire pressure sensors to measure pressure and temperature inside the tire and transmit the information through radio signal. Under the normal operation, the wireless tire pressure sensors will receive the normal value to represent the tire pressure or temperature. When the system detects one or more abnormal tire pressure or temperature, the wireless tire pressure sensors will send a wireless emergency signal to the Bluetooth receiver and the receiver and the smart phone will warn the drivers with an alarm sound and a warning light in orange color immediately. (And the driver could check the detailed tire information by smart phone) Then, in order to prevent any possible accidents caused by tire pressure or temperature, the driver shall immediately inspect the tire and get professional support when needed.

Caution: the system is wireless RF product; therefore, it may not receive a signal due to the poor environment or incorrect operating or incorrect installation. When the system continually cannot receive any signal from any tire sensor **more than 10 minutes** since the system be switch on power for monitoring, the system will shown " " (Blank) and turn on the RED abnormal tire LED light and alert sound. In this case, it may cause by a RF interference environment, a driver need to drive the vehicle and leave this place. If the display still cannot receive any correct signal from tire sensor, then, a driver need to find a nearby qualified tire maintain service for checking and maintain. It may cause by a tire sensor damages or battery power consumption. (In abnormal condition, the tire sensor will continually send warning signal for driver, thus it wills consumption the battery quickly than normal prediction.)

System Installation and Usage

This system is suitable for use on a passenger car, SUV and 4X4 tires. Installation of the TPMS requires the qualified personnel to complete the installation process according to instructions here. And any improper installation or dismantling to the device, the customer should be pay full responsibilities to it and won't be able to get the product warranty

Caution: Do not operate the TPMS tire pressure monitoring system while driving. The product development company and its developers are not responsible for any loss or liability damages resulting from the improper operation.
