RE: Grant ID: TIH8731540

To whom it may concern:

This is a request for a Class II Permissive Change under Section 15 E for the Blue Secure 1540 Access Point product. Under Section 15 E, the current grant covers the frequencies of 5260.0 – 5320.0. In regards to the Dynamic Frequency Selection rules, channels 52 – 60 will be disabled, causing these frequencies to be deleted. Only a software change is required to disable these channels, and it is implemented under the control of the manufacturer only. There is no hardware change involved, furthermore, the user will not be provided with firmware or software in order to enable the channels.

In addition, channels 36 – 44 have been enabled, adding the frequency range of 5180 – 5220. This was a software change that was implemented under the control of the manufacturer only. There is no hardware change involved.

Thank you in advance for your consideration
