## 10. ELECTRICAL INTERFACE

### 10.1 Transmission line and matching

The matching network has to be individually designed using one, two or three components.

$t, w$  = Unique dimensioning according to your PCB \*  
 $C$  = Inductor and capacitor values according to your specific device\*

\* gigaAnt provides this service upon request

### 10.2 Test board dimensions

The testboard is designed for evaluation purposes for Limata 2.4 GHz SMD antenna. The card has the same size as a typical PCMCIA card and is fitted with a SMA connector.

### 10.3 Test board matching

The testboard is matched with above specified component. Note! The component value(s) will vary depending on size of PCB, surrounding components etc.

## 11. SOLDERING

### 11.1 Recommended soldering conditions

### 11.2 Leadfree soldering

The antenna has been tested and approved for leadfree soldering. The reflow curve and solder paste used is listed below.

Solder paste: KOKI S3X58-M405

## 12. RELIABILITY

Azo compound	Tetra-bromo-bisphenol-A-bis (TBBP-A-bis)

## 14. APPLICATION EXAMPLE

### General

The antenna is of a quarter wave type and is dependent on the groundplane area to complete the antenna function. The antenna performance is also dependent on the size of the groundplane and the transparent area.

#### 1. Placement of the antenna

The antenna shall be placed on a transparent area without underlying groundplane at the edge of the PCB oriented as above. Groundplane area surrounding the antenna should be with a clearance of  $G=3-5$  mm.

#### 2. Placement of 2.4 GHz module

To avoid losses in the strip line, the module shall be placed as close to the antenna as possible.

#### 3. Strip line

The strip line must be dimensioned according to your specific PCB. (see fig 1). No crossing strip lines are allowed between the strip line and its ground plane.

#### 4. Via Connections

To avoid spurious effects via connections must be made to analogue ground.

#### 5. Component matching

Component values are depending on antenna placement, PCB dimensions and location of other components.

#### 6. DC Block

Might be needed depending on RF Module configuration.

#### 7. Clearance

No components allowed within the clearance area with a minimum distance to other components,  $C=3-5$  mm.

#### 8. Casing material

No metal casing or plastics using metal flakes should be used, avoid also metallic based paint or laquer. Keep a minimum clearance of 1mm between the antenna and the casing.

**Note !    Incorrect implementation of the antenna will affect the performance.
