

# **RF Exposure Evaluation Declaration**

- FCC ID: **TK4WLE600V5**
- **APPLICANT:** Compex Systems Pte Ltd.
- Application Type: Certification **Product:** WIRELESS-AC 2X2 27DBM NETWORK MINI PCIE ADAPTER Model No.: WLE600V5-27 Trademark: COMPEX

FCC Classification: Unlicensed National Information Infrastructure (UNII)

**Reviewed By:** 

Jame Yuan (Jame Yuan) Robin Wu

Approved By:

The test results relate only to the samples tested.

The test results shown in the test report are traceable to the national/international standards through the calibration of the equipment and evaluated measurement uncertainty herein.

The test report shall not be reproduced except in full without the written approval of MRT Technology (Suzhou) Co., Ltd.

## 1. PRODUCT INFORMATION

### 1.1. Equipment Description

Product Name:	WIRELESS-AC 2X2 27DBM NETWORK MINI PCIE ADAPTER			
Model No.:	WLE600V5-27			
Serial Model No.:	NLE600V5-27ESD-I			
Serial No.:	29449325			
Rated Voltage:	DC 3.3V			
Temperature:	-20 ~ 70°C			
Wi-Fi Specification:	802.11a/n/ac, 2*2 MIMO			
Frequency Range:	For 802.11a/n-HT20/ac-VHT20:			
	5180~5240MHz, 5745~5825MHz			
For 802.11n-HT40/ac-VHT40: 5190~5230MHz, 5755~5795MHz				
	5210MHz, 5775MHz			
Modulation Technology:	802.11a/n/ac: OFDM			
Data Rate:	802.11a: 6/9/12/18/24/36/48/54Mbps			
	802.11n: up to 300Mbps			
	802.11ac: up to 866.7Mbps			

Note: The difference between models is sold in different markets.

#### 1.2. Antenna Description

Antenna Type	Frequency Band (GHz)	Model Name	Max Antenna Gain	Directional Gain (dBi)	
			(dBi)	For Power	For PSD
Dipole Antenna	5.15~5.35	KMA5250_7	7.0	7.0	10.01
	5.70 ~5.90	KMA5800_6	6.0	6.0	9.01
Panel Antenna	4.90 ~5.90	FP4959-22DP	22.5	22.5	22.5

Note 1: The EUT supports Cyclic Delay Diversity (CDD) mode, and CDD signals are correlated.

For CDD transmissions, directional gain is calculated as follows,  $N_{ANT} = 2$ ,  $N_{SS} = 1$ .

If all antennas have the same gain,  $G_{ANT}$ , Directional gain =  $G_{ANT}$  + Array Gain, where Array Gain is as follows.

- For PSD measurements on all devices, Array Gain =  $10 \log(N_{ANT}/N_{SS}) dB = 3.01$ ;
- For power measurements on IEEE 802.11 devices, Array Gain = 0 dB for  $N_{ANT} \le 4$ ;

Note 2: Panel antenna support Cross-Polarized design, so directional gain is the gain of an individual antenna.

Note 3: When used with dipole antenna, this device was defined as P-T-MP application and support NII-1 / NII-3 bands. When used with panel antenna, this device was defined as P-T-P application and support NII-3 band.

Note 4: All antenna information (Antenna type and Peak Gain) is provided by the manufacturer.

### 2. **RF Exposure Evaluation**

#### 2.1. Limits

According to FCC 1.1310: The criteria listed in the following table shall be used to evaluate the environment impact of human exposure to radio frequency (RF) radiation as specified in 1.1307(b)

Frequency Range	Electric Field	Magnetic Field	Power Density	Average Time		
(MHz)	Strength (V/m)	Strength (A/m)	(mW/cm <sup>2</sup> )	(Minutes)		
(A) Limits for Occupational/ Control Exposures						
300-1500			f/300	6		
1500-100,000			5	6		
(B) Limits for General Population/ Uncontrolled Exposures						
300-1500			f/1500	6		
1500-100,000			1	30		

#### LIMITS FOR MAXIMUM PERMISSIBLE EXPOSURE (MPE)

f= Frequency in MHz

Calculation Formula:  $Pd = (Pout^{*}G)/(4^{*}pi^{*}r^{2})$ 

Where

 $Pd = power density in mW/cm^2$ 

Pout = output power to antenna in mW

G = gain of antenna in linear scale

Pi = 3.1416

r = distance between observation point and center of the radiator in cm

Pd is the limit of MPE, 1mW/cm<sup>2</sup>. If we know the maximum gain of the antenna and the total power input to the antenna, through the calculation, we will know the distance r where the MPE limit is reached.

#### 2.2. Test Result of RF Exposure Evaluation

Product	WIRELESS-AC 2X2 27DBM NETWORK MINI PCIE ADAPTER		
Test Item	RF Exposure Evaluation		

Antenna Gain: Refer to clause 1.2.

#### For P-T-MP configuration

Test Mode	Frequency Band (MHz)	Maximum EIRP (dBm)	Power Density at R = 20 cm (mW/cm <sup>2</sup> )	Limit (mW/cm <sup>2</sup> )
802.11a/n/ac	5180 ~ 5240, 5745 ~ 5825	35.83	0.7616	1

#### CONCLUSION:

The max Power Density at R (20 cm) = 0.7616 mW/cm<sup>2</sup> < 1mW/cm<sup>2</sup>.

Therefore, the Min Safety Distance is 20cm.

#### For P-T-P configuration

Frequency Band	Maximum EIRP	Power Density at	Limit	Power Density at
(MHz)	(dBm)	R = 20 cm	(mW/cm <sup>2</sup> )	R = 51 cm
		(mW/cm <sup>2</sup> )		(mW/cm <sup>2</sup> )
5180 ~ 5240, 5745 ~ 5825	45.11	6.4525	1	0.9923
	Frequency Band (MHz) 5180 ~ 5240, 5745 ~ 5825	Frequency Band (MHz) 5180 ~ 5240, 5745 ~ 5825 Maximum EIRP (dBm) 45.11	Frequency BandMaximum EIRPPower Density at $(MHz)$ $(MHz)$ $(dBm)$ $R = 20 \text{ cm}$ $(mW/cm^2)$ $5180 \sim 5240$ , $5745 \sim 5825$ $45.11$ $6.4525$	Frequency Band (MHz)Maximum EIRP (dBm)Power Density at $R = 20 \text{ cm}$ (mW/cm²)Limit (mW/cm²) $5180 \sim 5240$ , $5745 \sim 5825$ 45.11 $6.4525$ 1

#### CONCLUSION:

The max Power Density at R (51 cm) = 0.9923 mW/cm<sup>2</sup> < 1mW/cm<sup>2</sup>.

Therefore, the Min Safety Distance is 51cm.
