1. Laboratory Information

1.1 General

This EUT (Equipment Under Test) has been shown to be capable of compliance with the applicable technical standards and is tested in accordance with the measurement procedures as indicated in this report.ESTECH Lab attests to accuracy of test data. All measurement reported herein were performed by ESTECH Co., Ltd.

ESTECH Lab assume full responsibility for the completeness of these measurements and vouch for the qualifications of all persons taking them.

1.2 Test Lab.

Corporation Name: ESTECH Co., Ltd.

Head Office: Suite 1015 World Meridian II, 123 Gasan Digital 2-ro, Geumcheon-gu,

Seoul 153-759, R. O. Korea

EMC/Telecom/Safety Test Lab: 347-69, Jungbu-daero 147beon-gil, Majang-myeon, Icheon-si, Gyeonggi-do 467-811, R. O. Korea

1.3 Official Qualification(s)

Report Number: ESTRFC1804-002

MSIP: Granted Accreditation from Ministry of Information & Communication for EMC, Safety and Telecommunication

KOLAS: Accredited Lab By Korea Laboratory Accreditation Schema base on CENELEC requirements

FCC: Conformity Assessment Body(CAB) with registration number 659627 under APEC TEL MRA between the RRA and the FCC

VCCI: Granted Accreditation from Voluntary Control Council for Interference from ITE

2. Description of EUT

2.1 Summary of Equipment Under Test

: BioLite N2 Product : BLN2-OAB Model Number Serial Number : NONE : Suprema Inc Manufacturer

: KOREA Country of origin Operating Frequency : 13.56 MHz

Antenna Type : PCB Patten Antenna

Modulation Type : ASK Channel : 1 ch

. INPUT : (100 - 240) Va.c., (50 - 60) Hz, 1.0 A OUTPUT : 12 Vd.c., 2.5 A

: 14-Jul-17 Receipt Date

X-tal list(s) or

Frequencies generated

Power Rating

: The highest operating frequency is CPU 1.2 GHz

2.2 General descriptions of EUT

| Category | Feature | Specification | | |

^{*} RF read range will vary depending on the installation environment.

Report Number: ESTRFC1804-002

3. Test Standards

Test Standard: FCC PART 15 Subpart C(15.225)

This Standard sets out the regulations under which an intentional, unintentional, or incidental radiator may be operated without an individual license. It also contains the technical specifications, administrative requirements and other conditions relating to the marketing of Part 15 devices.

Test Method: ANSI C 63.10 (2013)

This standard sets forth uniform methods of measurement of radio-frequency (RF) signals and noise emitted from both unintentional and intentional emitters of RF energy in the frequency range 9 kHz to 40 GHz. Methods for the measurement of radiated and AC power-line conducted radio noise are covered and may be applied to any such equipment unless otherwise specified by individual equipment requirements. These methods cover measurement of certain decides that deliberately radiate energy, such as intentional emitters, but does not cover licensed transmitters. This standard is not intended for certification/approval of avionic equipment or for industrial, scientific, and medical (ISM) equipment These method apply to the measurement of individual units or systems comprised of multiple units

Summary of Test Results

Report Number: ESTRFC1804-002

| | Applied Satandard: 47 (| OFR Part 15, S | ubpart C | |
|-----------|----------------------------------------------------------------------|----------------|----------------------|------------------------|
| Standard | Test Type | Result | Remark | Limit |
| 15.203 | Antenna Requirement | Pass | Meet the requirement | |
| 15.207 | AC Power Conducted Emission | Pass | Meet the requirement | |
| 15.225(a) | Radiated Emission (13.553 ~13.567) MHz | Pass | Meet the requirement | 15,848 uV/m at 30 m |
| 15.225(b) | Radiated Emission (13.410 ~13.553 , 13.567 ~ 13.710) MHz | Pass | Meet the requirement | 334 uV/m at 30 m |
| 15.225(c) | Radiated Emission (13.110 ~13.410 , 13.710 ~ 14.010) MHz | Pass | Meet the requirement | 106 uV/m at 30 m |
| 15.225(d) | Apply section 15.209 (out side band of the 13.110 ~14.010) MHz | Pass | Meet the requirement | |
| 15.225(e) | Frequency stability | Pass | Meet the requirement | |
| 15.215(c) | 20dB Bandwidth | Pass | Meet the requirement | |

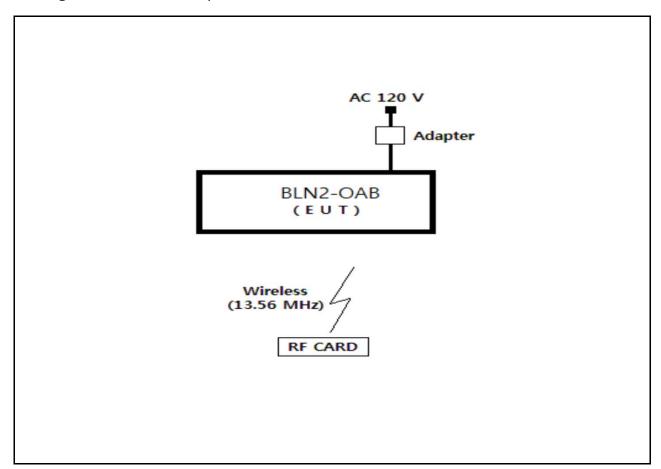

4. Measurement Condition

4.1 EUT Operation.

- -The EUT was tested, under transmission / receiving
- 1. Normal communication with RF OUT Frequeny(13.56 MHz).
- 2. Monitoring the operation status of frequency by using RF CARD.

4.2 Configuration and Peripherals

4.3 EUT and Support equipment

5. 20 dB Bandwidth

5.1 Procedure

The transmitter output was connected to the spectrum analyzer. The bandwidth of the fundamental frequency was measured by spectrum analyzer. The 20 dB bandwidth is defined as the bandwidth at 20 dB below from peak power point.

5.2 20dB Bandwidth setup

The spectrum analyzer is set to as following

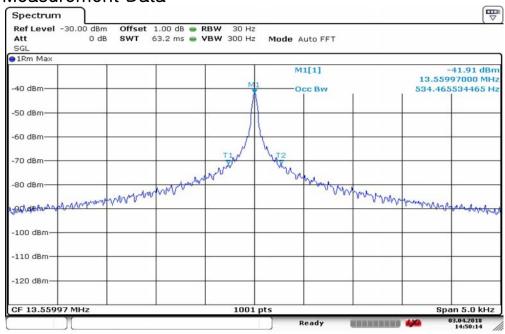

RBW: 30 Hz VBW: 300 Hz Span: 5 kHz

Sweep:suitable duration based on the EUT specification

20dB Bandwidth Test Instruments

| Decription | Model | Serial Number | Cal. Due Data |
|-----------------|-------|---------------|---------------|
| Signal Analyzer | FSV40 | 100939 | 27-Dec-18 |

5.3 Measurement Data

6. Frequency Tolerance

6.1 Procedure

The frequency stability of the transmitter is measured by:

- a) Temperature: The temperature is varied from -20 ℃ to +50 ℃ using an environmental chamber.
- b) Primary Supply Voltage: The primary supply voltage is varied from 85 % to 115 % of the voltage normally at the input to the device or at the power supply terminals if cables are not normally supplied.

The frequency tolerance of the carrier shall be maintained within ± 0.01 % of the operating frequency.

6.2 Equipment lists

Report Number: ESTRFC1804-002

The following test equipments are used during test

| Decription | Model | Serial Number | Cal. Due Data |
|------------------------|----------|---------------|---------------|
| Signal Analyzer | FSV40 | 100939 | 27-Dec-18 |
| Temp./Humidity Chamber | SM-150-2 | 04-TH24 | 26-Dec-18 |
| | | | |
| | | | |

6.3 Frequency stability Data (Adapter)

Report Number: ESTRFC1804-002

 $\begin{array}{lll} \text{Operting Frequency:} & 13,560,012 & \text{Hz} \\ \text{Reference Voltage:} & 12.00 & \text{Vd.c.} \\ \text{Deviatin Limit:} & \pm 0.01 & \% \\ \end{array}$

| Voltage | Power | Temperature | Frequency | Deviation |

7. Measurement of radiated disturbance

The EUT was placed on the top of a rotating table 0.8 m above the ground at a 10 m semi-anechoic chamber . The table was rotated 360° to determine the position of the highest radiation. Then antenna is a loop antenna is fixed at 1 m above the ground to determine the maximum value of the field strength. Both parallel and perpendicular of the antenna are set to make the measurement. For each suspected emission, the EUT was arranged to its worst case and then the table was turned from 0° to 360° to find the maximum reading. The test receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.

7.1 Radiated emission limits, general requirements

Except as provided elsewhere in this Subpart, the emissions from an intentional radiator

shall not exceed the field strength levels specified in the following table:

| Frequency (MHz) | Field strength @30 m (uV/m) | Field strength @30 m (dBuV/m) | Field strength @3m (dBuV/m) |
|--------------------|--------------------------------|----------------------------------|--------------------------------|
| Below 13.110 | 30 | 29.5 | 69.5 |
| 13.110 ~13.410 | 106 | 40.5 | 80.5 |
| 13.410 ~ 13.553 | 334 | 50.5 | 90.5 |
| 13.553 ~ 13.567 | 15,848 | 84 | 124 |
| 13.567 ~ 13.710 | 334 | 50.5 | 90.5 |
| 13.710 ~ 14.010 | 106 | 40.5 | 80.5 |
| Above 14.010 | 30 | 29.5 | 69.5 |

^{*} dBuV/m=20*log(uV/m) * Distance factor=40dB / decade(15.31(f))

| | | | | | | | | | |
| | | | | | | | | | |

Remark

 $[\]star$ The 30 m limit was converted to 3 m Limit using square factor(x) as it was found by measurements as follows;

 $^{*3 \}text{ m Limit}(dBuV/m) = 20log(X)+40log(30/3)=20log(15848)+40log(30/3)=124 dBuV$

 $^{*3 \}text{ m Limit}(dBuV/m) = 20log(X)+40log(30/3)=20log(30)+40log(30/3)=69.5 dBuV$

^{*} The EUT was measured for the worst case by rotating of antenna angle.

^{*} The EUT performed at X,Y,Z and recorded the worst data in the report.

8. Measurement of conducted disturbance

The continuous disturbance voltage of AC Mains in the frequency from 0.15 MHz to 30 MHz was measured in accordance to FCC Part 15 & ANSI C 63.10 (2013) The test setup was made according to FCC Part 15 & ANSI C 63.10 (2013) in a shielded Room. The EUT was placed on a non-conductive table at least 0.8 m above the ground plan. A grounded vertical reference plane was positioned in a distance of 0.4 m from the EUT. The distance from the EUT to other metal surfaces was at least 0.8 m. The EUT was only earthen by its power cord through the line impedance stabilizing network. The power cord has been bundled to a length of 1.0 m. The test receiver with Quasi Peak detector complies with CISPR 16.

Appendix 1. Antenna Requirement

Regulation

According to §15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this Section. The manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

Result

-Complied

The transmitter has an PCB Patten Antenna.
