1. Laboratory Information

1.1 General

This EUT (Equipment Under Test) has been shown to be capable of compliance with the applicable technical standards and is tested in accordance with the measurement procedures as indicated in this report.ESTECH Lab attests to accuracy of test data. All measurement reported herein were performed by ESTECH Co., Ltd.

ESTECH Lab assume full responsibility for the completeness of these measurements and vouch for the qualifications of all persons taking them.

1.2 Test Lab.

Corporation Name: ESTECH Co., Ltd.

Head Office: Suite 1015 World Meridian II, 123 Gasan Digital 2-ro, Geumcheon-gu, Seoul 153-759, R. O. Korea

EMC/Telecom/Safety Test Lab: 347-69, Jungbu-daero 147beon-gil, Majang-myeon, Icheon-si, Gyeonggi-do 467-811, R. O. Korea

1.3 Official Qualification(s)

Report Number: ESTRFC1703-002

KCC: Granted Accreditation from Ministry of Information & Communication for EMC, Safety and Telecommunication

KOLAS: Accredited Lab By Korea Laboratory Accreditation Schema base on CENELEC

FCC: Filed Laboratory at Federal Communications Commission

VCCI: Granted Accreditation from Voluntary Control Council for Interference from ITE

2. Description of EUT

2.1 Summary of Equipment Under Test

: Face Station2 Product

Model Number : FS2-D : NONE Serial Number

: Suprema Inc. Manufacturer

: KOREA Country of origin Operating Frequency: 117.54 kHz : Coil Antenna Antenna Type

: ASK Modulation Type Channel Spacing : 1

. INPUT: (100 - 240) Va.c., (50 - 60) Hz, 1.0 A Power Rating

OUTPUT: 12 Vd.c., 2.5 A

:5-Dec-16 Receipt Date

X-tal list(s) or

: The highest operating frequency is CPU 1.4 GHz Frequencies generated

2.2 General descriptions of EUT

CPU 1.4 GHz Quad Core

Memory 8GB Flash + 1GB RAM

LCD 4" color TFT LCD (Resolution: 480 x 800)

Sound 24 bit/Voice DSP (echo cancel) Operating temperature -20 °C ~ 50 °C Storage temperature -40 °C ~ 70 °C

Operating humidity 0 % ~ 80 %, non-condensing Storage humidity 0 % ~ 90 %, non-condensing

Camera CMOS VGA (720 x 480) pixels

Report Number: ESTRFC1703-002

Camera angle Visual: Diagonal 92.7°, IR: Diagonal 58° Dimension (W x H x D) 141 mm x 125 mm x 164 mm (h)

Weight Device: 610 g (With Wall-Bracket) RF Option RFID: 13.56 MHz / 117 kHz

3. Test Standards

Test Standard: FCC PART 15

This Standard sets out the regulations under which an intentional, unintentional, or incidental radiator may be operated without an individual license. It also contains the technical specifications, administrative requirements and other conditions relating to the marketing of Part 15 devices.

Test Method: ANSI C 63.10 (2013)

This standard sets forth uniform methods of measurement of radio-frequency (RF) signals and noise emitted from both unintentional and intentional emitters of RF energy in the frequency range 9 kHz to 40 GHz. Methods for the measurement of radiated and AC power-line conducted radio noise are covered and may be applied to any such equipment unless otherwise specified by individual equipment requirements. These methods cover measurement of certain decides that deliberately radiate energy, such as intentional emitters, but does not cover licensed transmitters. This standard is not intended for certification/approval of avionic equipment or for industrial, scientific, and medical (ISM) equipment These method apply to the measurement of individual units or systems comprised of multiple units

Summary of Test Results

| Applied Satandard : 47 CFR Part 15, Subpart C | | | | | | | |
|---|------------------------------------|------|----------------------|-------|--|--|--|
| Standard | dard Test Type | | Remark | Limit | | | |
| 15.203 | Antenna Requirement | Pass | See Appendix 2 | | | | |
| 15.207 | 15.207 AC Power Conducted Emission | | Meet the requirement | | | | |
| 15.205 | 15.205 Restricted bands | | Meet the requirement | | | | |
| 15.209 | 15.209 Radiated Emission | | Meet the requirement | | | | |

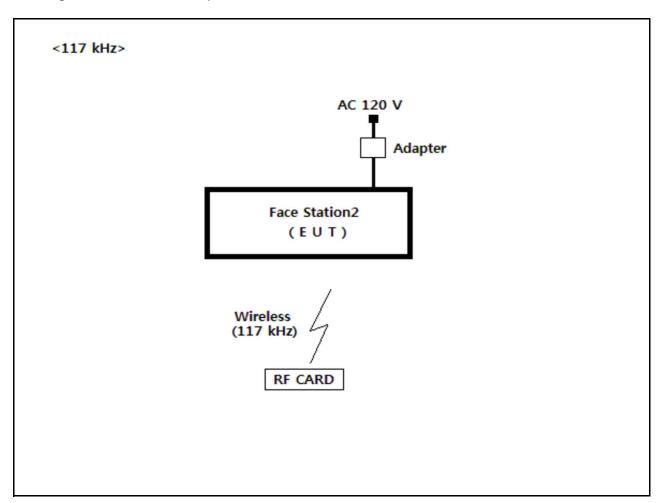

4. Measurement Condition

4.1 EUT Operation.

- -The EUT was tested, under transmission / receiving
- 1. Normal communication with RF OUT Frequeny(117 kHz).
- 2. Monitoring the operation status of frequency by using RF CARD.

4.2 Configuration and Peripherals

4.3 EUT and Support equipment

| Equipment Name | Model Name | S/N | Manufacturer | Remark (FCC ID) |

| | | | | | | |
| | | | | | | |

5. Measurement of radiated disturbance

The EUT was placed on the top of a rotating table 0.8 m above the ground at a 3 m Open test site. The table was rotated 360 ° to determine the position of the highest radiation. Then antenna is a loop antenna is fixed at one meter above the ground to determine the maximum value of the field strength. Both parallel and perpendicular of the antenna are set to make the measurement. For each suspected emission, the EUT was arranged to its worst case and then the table was turned from 0 degrees to 360 ° to find the maximum reading. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.

5.1 Radiated emission limits, general requirements

Except as provided elsewhere in this Subpart, the emissions from an intentional radiator shall not exceed the field strength levels specified in the following table:

| Frequency (MHz) | Field Strength(microvolt/meter) | Distance(meter) |
|--------------------|---------------------------------|-----------------|
| 0.009-0.490 | 2400/F(KHz) | 300 |
| 0.490-1.705 | 24000/F(KHz) | 30 |
| 1.705-30 | 30 | 30 |
| 30-88 | 100** | 3 |
| 88-216 | 150** | 3 |
| 216-960 | 200** | 3 |
| Above 960 | 500 | 3 |

^{*} dBuV/m=20*log(uV/m) * Distance factor=40dB / decade(15.31(f))

5.2 Measurement equipments

| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |

H: Horizontal, V: Vertical

*Result Value = Reading + Antenna + Cable loss

Remark

^{*}Correction Factor = Ant Factor + Cable

^{*}The resolution bandwidth and video bandwidth of test receiver/spectrum analyzer is 120 kHz for Quasi-peak detection

6. Measurement of conducted disturbance

The continuous disturbance voltage of AC Mains in the frequency from 0.15 MHz to 30 MHz was measured in accordance to FCC Part 15 & ANSI C 63.10 (2013) The test setup was made according to FCC Part 15 & ANSI C 63.10 (2013) in a shielded Room. The EUT was placed on a non-conductive table at least 0.8 m above the ground plan. A grounded vertical reference plane was positioned in a distance of 0.4 m from the EUT. The distance from the EUT to other metal surfaces was at least 0.8 m. The EUT was only earthen by its power cord through the line impedance stabilizing network. The power cord has been bundled to a length of 1.0 m. The test receiver with Quasi Peak detector complies with CISPR 16.

6.1 Measurement equipments

| Equipment Name | Туре | Manufacturer | Serial No. | Next Calibration date |

Appendix 2. Antenna Requirement

Regulation

According to §15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this Section. The manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

Result

-Complied

The transmitter has an integral Loop coil antenna.
