## RF Exposure

## 1. Regulation

## - FCC

According to $\S 15.247(\mathrm{i})$, systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy levels in excess of the Commission's guidelines. See § 1.1307(b)(1) of this Chapter.

Limits for Maximum Permissive Exposure: RF exposure is calculated.

| Frequency Range | Electric Field <br> Strength [V/m] | Magnetic Field <br> Strength [A/m] | Power Density <br> $\left[\mathrm{mW} / \mathrm{cm}^{2}\right]$ | Averaging <br> Time <br> [minute] |
| :---: | :---: | :---: | :---: | :---: |
| Limits for General Population / Uncontrolled Exposure |  |  |  |  |
| $0.3 \sim 1.34$ | 614 | 1.63 | ${ }^{*}(100)$ | 30 |
| $1.34 \sim 30$ | $824 / \mathrm{f}$ | $2.19 / \mathrm{f}$ | ${ }^{\left(180 / \mathrm{f}^{2}\right)}$ | 30 |
| $30 \sim 300$ | 27.5 | 0.073 | 0.2 | 30 |
| $300 \sim 1500$ | $/$ | $/$ | $\mathrm{f} / 1500$ | 30 |
| $1500 \sim 15000$ | $/$ | $/$ | 1.0 | 30 |

$f=f r e q u e n c y$ in NHz, *= plane-wave equivalent power density

## MPE (Maximum Permissive Exposure) Prediction

Predication of MPE limit at a given distance: Equation from page 18 of OET Bulletin 65, Edition 97-01
$S=P G / 4 \pi R^{2} \quad(\Rightarrow R=\sqrt{P G / 4 \pi S})$
$\mathrm{S}=$ power density [mW/cm²]
P = Power input to antenna [mW]
$\mathrm{G}=$ Power gain of the antenna in the direction of interest relative to an isotropic radiator
$R=$ distance to the center of radiation of the antenna [cm]

## Exemption Limits for Routine Evalutation - RF Exposure Evaluation

RF exposure evaluation isrequired if the separation distance between the user and/or bystander and the Device's radiation element is greater than 20 cm , except when the device operates as follows:

- below $20 \mathrm{MHz}^{6}$ and the source-based, time-averaged maximum e.i.r.p. of the device is equal to or less than 1 W (adjused for tune-up tolerance);
- at or above 20 MHz and below 48 MHz and the source-based, time-averaged maximum ei.i.p. of the device is equal to or less than $4.49 / f 0.5 \mathrm{~W}$ (adjused for tune-up tolerance), where f is in MHz ;
- at or above 48 MHz and below 300 MHz and the source-based, time-averaged maximum e.i.r.p. of the device is equal to or less than 0.6 W (adjused for tune-up tolerance);
- at or above 300 MHz and below 6 GHz and the source-based, time-averaged maximum e.i.r.p. of the device is equal to or less than $1.31 \times 10^{-2} f^{0.6834} \mathrm{~W}$ (adjused for tune-up tolerance);
- at or above 6 GHz and the source-based, time-averaged maximum e.i.r.p. of the device is equal to or less than 5 W (adjused for tune-up tolerance).

## 2. RF Exposure Compliance Issue

The information should be included in the user's manual:
This appliance and its antenna must not be co-located or operation in conjunction with any other antenna or transmitter. A minimum separation distance of 20 cm must be maintained between the antenna and the person for this appliance to satisfy the RF exposure requirements.

Note.

- Regarding to clause 2.5.2 of RSS-102, exemption limits was calculated as below
$1.31 \times 10^{-2} f^{0.6834} \mathrm{~W}=1.31 \times 10^{-2} \times 2480^{0.6834}=2.74 \mathrm{~W}$
