1. General Description

4-3. Product Overview and Functional Description

AzureWave Technologies, Inc. introduces the advanced **IEEE 802.11a/b/g/n(2x2) WLAN and Bluetooth combo** module - **AW-AM691NF**. The module is targeted to mobile and embedded devices which need small footprint package, low power consumption, and multiple OS support. The module supports **2.4GHz and 5GHz bands** two-stream MIMO IEEE 802.11n MAC/baseband/radio, and Bluetooth 4.0 + HS functionality. It also features an integrated Power Management Unit (PMU), Power Amplifiers (PAs), and a Low Noise Amplifier (LNA) to address the needs of mobile devices that require minimal power consumption and compact size. By using AW-AM691NF, the customers can easily enable the Wi-Fi and BT embedded applications with the benefits of **high design flexibility, short development cycle, and quick time-to-market**.

For the WLAN operation, the AW-AM691NF uses DSSS, OFDM, DBPSK, DQPSK, CCK and QAM baseband modulation technologies. It supports **20 MHz and 40 MHz channels** provide PHY layer rates up to 300 Mbps. A high level of integration and full implementation of the power management functions specified in the IEEE 802.11 standard minimize the system power requirements by using AW-AM691NF. In addition to the support of **WPA/WPA2 (personal)** and **WEP** encryption, the AW-AM691NF also supports the IEEE 802.11i security standard through **AES** and **TKIP** acceleration hardware for faster data encryption. For the video, voice and multimedia applications the AW-AM691NF support 802.11e Quality of Service (QoS). The host interface is **SDIO v3.0** interface.

For Bluetooth operation, the AW-AM691NF is **Bluetooth 4.0 + HS** compliant. The Bluetooth transmitter also features a Class 1 power amplifier with Class 2 capability. The AW-AM691NF supports **extended Synchronous Connections (eSCO)**, for enhanced voice quality by allowing for retransmission of dropped packets, and **Adaptive Frequency Hopping (AFH)** for reducing radio frequency interference. It also incorporates all Bluetooth 4.0 features including **Secure Simple Pairing, Sniff Subrating, and Encryption Pause and Resume**. An independent, high-speed UART is provided for the Bluetooth host interface. The Bluetooth subsystem presents a standard Host Controller Interface (HCI) via a high speed UART and PCM for audio.

Contents

1. Activate AW-AM634NF

- 1-1. What you need
- 1-2. Power-Up AW-AM634NF
- 1-3. Test Software Version

2. WLAN Basic Test

- 2-1. Driver Installation
- 2-2. Throughput Test
- 2-3. RF Tx/Rx Performance Test

3. Bluetooth Basic Test

- 3-1. Download Mini-driver
- 3-2. Throughput Test
- 3-3. RF Performance Test

4. Known Limitation/Issues

5. Demo board schematic

1. Activate AW-AM634NF

1-1. what you need

Hardware:

AW-AM691NF Demo Board V.01

SDIO to PCI Host Controller

USB-B type to A type Cable

Software (Windows XP):

Ubuntu 12.04 LTS

WLAN: firmware, nvram file, dhd.ko, wl.exe

Bluetooth: Bluetool V1.1.9.3, HCD HCI download file, ActivePerl 5.8 and driver for Prolific USB to UART Bridge.

FIG. 1.1

1-2. Power UP AW-AM634NF

FIG. 1.2

1-3. Test Software Version

Test Station	Item	Version	Remarks
WLAN	firmware	sdio-ag-mfgtest-seqcmds-autoabn.bin	6.10.185
	nvrnram	AH691.NVRAM_20130605.txt	
BT	HCD File	BCM4324B3_002.004.006.0076.0081_RC.hcd	
		BCM4324B3_002.004.006.0076.0082_RC.hcd	

2. WLAN Basic Test

J5/J1 setting as below

Must connect USB to PC

2-1. Driver Installation

COMPONENTS

dhd.ko

dhd.ko is an utility application that one can use to control the software running in the dongle host for test and debug purposes.

wl.exe

wl is an utility application that one can use to control the software running in the SDIO dongle, e.g. initiate an association and modify WLAN parameters.

DRIVER INSTALLATION (IN LINUX)

- First prepare the Broadcom's Linux package, and put it in the "home" folder.
- Open the Terminal, enter the command: **sudo su** and **password**.
- Enter **cd /home/username/5.90.195.26.3/open-src/src/dhd/linux**
- Enter **make dhd-cdc-sdmmc-gpl** to generate the **dhd.ko** file in
/home/username/5.90.195.26.3/open-src/src/dhd/linux/dhd-cdc-sdmmc-gpl-2.6.32-21-generic
- Enter

Insmod /(path of dhd.ko file)

firmware_path=/(path of firmware file) nvram_path=/(path of nvram file) to enable.

- Enter **rmmod dhd** to disable
-

2-2. Throughput Test

CONNECTING TO WIRELESS NETWORKS

The examples in the following sections illustrate how to connect to both infrastructure and ad hoc networks, including Infrastructure networks that use no security, WEP security, and WPA/PSK and WPS2/PSK security.

SCANNING FOR WIRELESS NETWORKS

To force the dongle to scan

- Run **wl scan**.

To force the dongle to return the results of the scan

- Run **wl scanresults**.

Example results returned when an AP is found:

- SSID: "Eval4325"
- Mode: Managed: RSSI: -48 dBm noise: -105 dBm Channel: 1
- BSSID: 00:10:18:90:2E:C1 Capability: ESS ShortSlot
- Supported Rates: [1(b) 2(b) 5.5(b) 11(b) 18 24 36 54 6 9 12 48]

Example results returned when an ad hoc network is found:

- SSID: "ADHOC#1"
- Mode: Ad Hoc RSSI: -41 dBm noise: -105 dBm Channel: 1
- BSSID: B2:51:28:6B:3C:A1 Capability: IBSS
- Supported Rates: [1(b) 2(b) 5.5(b) 11(b)]

CONNECTING TO AN INFRASTRUCTURE NETWORK WITH NO SECURITY (AP CONNECTION)

To connect to the network through an AP with SSID = Eval4325

Run **wl join Eval4325**.

Inspired by wireless

Confidential

- Warning!! This is a message from Azurewave and the information you are viewing now is strictly confidential and is a knowledge property to Azurewave.
- Unauthorized use of this document is prohibited and Azurewave retains the right for legal actions against any loss suffered or expenditure due to the misuse of any information from this document.

CONNECTING TO AN INFRASTRUCTURE NETWORK WITH WEP SECURITY

To connect to the network that uses 12345 as the network key

- Run `wl join Eval4325 key 12345`.

CONNECTING TO AN INFRASTRUCTURE NETWORK WITH WPA-PSK/WPA2-PSK SECURITY

To specify TKIP or AES as the data encryption method

- Run `wl wsec 3/7`.

To enable the supplicant

- Run `wl sup_wpa 1`.

To specify the PSK passphrase (network key) to use

- Run `wl set_psk $passphrase`.

To connect to a network that uses WPA-PSK security

- Run `wl join Eval4325 imode bss amode wpa2psk`.

To connect to a network that uses WPA2-PSK security

- Run `wl join Eval4325 imode bss amode wpa2psk`.

CONNECTING TO AN AD HOC NETWORK USING CHANNEL 1

To set the channel to channel 1

- Run `wl channel 1`.

To connect to the ad hoc network with SSID = 4325-ADHOC

- Run `wl join 4325-ADHOC imode ibss`.

MANAGING POWER CONSUMPTION

To disable Power Save (PS) mode (default)

- Run `wl PM 0`.

To enable legacy IEEE 802.11 Power Save (PS) mode

- Run `wl PM 1`.

To enable Fast IEEE 802.11 Power Save mode

- Run `wl PM 2`.

Note:

- The STA automatically transitions to Legacy PS mode when no data is being sent or received.
- The STA automatically disables PS mode when data is being sent or received.

MEASURING WLAN THROUGHPUT

The throughput measurement shows the performance of the TCP/IP layer over the wireless link. To achieve the best results,

run the measurement test in a clean environment with as little interference as possible . The test can be run with the adapter

connected to either an Infrastructure network (see Fig. 2.2) or an ad hoc network (see Fig. 2.3). An AP that is known to be

in good working order should be used for the infrastructure mode test.

FIG. 2.2

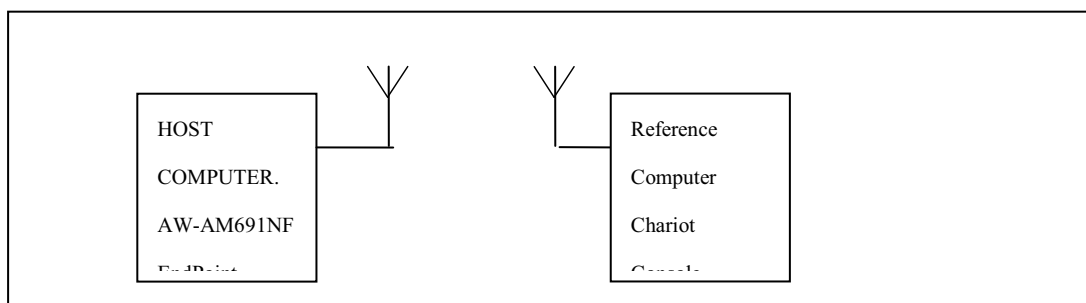

FIG. 2.3

MEASURING THROUGHPUT USING NETIQ CHARIOT

Test Procedure

1. Bring up the AW-AM691NF demo board with the IP address set as 192.168.1.110.
2. Connect the reference computer with Chariot Console, which is assigned an IP address of 192.168.1.100, to the LAN port of the AP
3. Verify that communication exists between the reference computer and the AW-AM691NF demo board by pinging **192.168.1.100** from the AW-AM691NF host console.

4. Set up Chariot.
 - a. On the host computer, activate EndPoint:
 - b. Using Chariot Console on the reference computer, create two pair groups (192.168.1.100 and 192.168.1.110) using the Chariot Throughput.scr script. Run the throughput test for a specified period of time and observe the results.

2-3. RF Tx/Rx Performance Test

CREATING A Tx TEST

1. From the **Start** menu, select **Run**.
2. Type **cmd**, then click **OK**.
3. Navigate to the directory that contains **wl.exe**
4. Enter the **wl ver** command to check the current WL driver version.
5. Run the following command set (**delay at least 700ms between each command**):

11b mode:

```
.wl ver  
.wl mpc 0  
.wl country US  
.wl up  
.wl phy_forcecal 1  
.wl interference 0  
.wl phy_watchdog 0  
.wl scansuppress 1  
.wl phy_oclscdenable 0  
.wl isup  
.wl down  
.wl band b  
.wl phymsglevel +cal  
.wl interference 0  
.wl interference_override 0  
.wl mimo_preamble  
.wl mimo_bw_cap 0  
.wl mimo_txbw -1  
.wl chanspec -c 7 -b 2 -w 20                    ←set Tx channel
```

```
.wl up
.wl phy_forcecal 1
.wl isup
.wl bi 10000
.wl join dummy imode adhoc
.wl assoc
.wl glacial_timer 30000
.wl phy_watchdog 0
.wl phy_percal 0
.wl phy_forcecal 1
.wl disassoc
.wl mimo_preamble
.wl chanspec
.wl sgi_tx 0
.wl nrate -r 11 ←set Tx data rate
.wl nrate
.wl sgi_tx
.wl down
.wl up
.wl txant 0 ←set Tx path 0: port 0, 1:port 1,
.wl antdiv 0 ←set Tx path 0: port 0, 1:port 1,
.wl txpwr1 -o -d 15 ←set Tx power
.wl phy_forcecal 1
.wl pkteng_start 10:20:30:40:50:60 tx 100 1500 0
```

This will send continuous Tx Packets with 100 us packet interval, 1500 byte packet length. Data rate =11Mbps, Channel=7 and output power =15dBm.

11g mode:

```
.wl ver
.wl mpc 0
.wl country US
.wl up
.wl phy_forcecal 1
.wl interference 0
```

```
.wl phy_watchdog 0
.wl scansuppress 1
.wl phy_oclscdenable 0
.wl isup
.wl down
.wl band b
.wl phymsglevel +cal
.wl interference 0
.wl interference_override 0
.wl mimo_preamble
.wl mimo_bw_cap 0
.wl mimo_txbw -1
.wl chanspec -c 7 -b 2 -w 20 ←set Tx channel
.wl up
.wl phy_forcecal 1
.wl isup
.wl bi 10000
.wl join dummy imode adhoc
.wl assoc
.wl glacial_timer 30000
.wl phy_watchdog 0
.wl phy_percal 0
.wl phy_forcecal 1
.wl disassoc
.wl mimo_preamble
.wl chanspec
.wl sgi_tx 0
.wl nrate -r 54 ←set Tx data rate
.wl nrate
.wl sgi_tx
.wl down
.wl up
.wl txant 0 ←set Tx path 0: port 0, 1:port 1,
.wl antdiv 0 ←set Tx path 0: port 0, 1:port 1,
.wl txpwr1 -o -d 14 ←set Tx power
.wl phy_forcecal 1
```

```
.wl pkteng_start 10:20:30:40:50:60 tx 100 1500 0
```

This will send continuous Tx Packets with 100 us packet interval, 1500 byte packet length. Data rate = 54Mbps, Channel=7 and output power = 14dBm.

2.4G 11n HT20 SISO mode:

```
.wl ver  
.wl mpc 0  
.wl country US  
.wl up  
.wl phy_forcecal 1  
.wl interference 0  
.wl phy_watchdog 0  
.wl scansuppress 1  
.wl phy_oclscdenable 0  
.wl isup  
.wl down  
.wl band b  
.wl phymsglevel +cal  
.wl interference 0  
.wl interference_override 0  
.wl mimo_preamble 0  
.wl mimo_bw_cap 0  
.wl mimo_txbw -1  
.wl chanspec -c 7 -b 2 -w 20 ←set Tx channel  
.wl up  
.wl phy_forcecal 1  
.wl isup  
.wl bi 10000  
.wl join dummy imode adhoc  
.wl assoc  
.wl glacial_timer 30000  
.wl phy_watchdog 0  
.wl phy_percal 0  
.wl phy_forcecal 1
```

```
./wl disassoc
./wl mimo_preamble
./wl chanspec
./wl sgi_tx 0
./wl nrate -m 7 -s 0           ←set Tx data rate
./wl nrate
./wl sgi_tx
./wl down
./wl up
./wl txant 0                  ←set Tx path 0: port 0, 1:port 1, 3: dual port
./wl antdiv 0                 ←set Tx path 0: port 0, 1:port 1, 3: dual port
./wl txpwr1 -o -d 13         ←set Tx power
./wl phy_forcecal 1
./wl pkteng_start 10:20:30:40:50:60 tx 100 1500 0
```

This will send continuous Tx Packets with 100 us packet interval, 1500 byte packet length. Data rate =MCS7, Bandwidth=20 MHz, Channel=7 and output power =13dBm.

CREATING A Rx TEST

1. From the **Start** menu, select **Run**.
2. Type **cmd**, then click **OK**.
3. Navigate to the directory that contains **wl.exe**.
4. Run the following command set (**delay at least 700ms between each command**):

11b Rx mode:

```
.wl ver  
.wl mpc 0  
.wl country US  
.wl up  
.wl phy_forcecal 1  
.wl interference 0  
.wl phy_watchdog 0  
.wl scansuppress 1  
.wl phy_oclscdenable 0  
.wl isup  
.wl down  
.wl mimo_preamble 0  
.wl mimo_bw_cap 0  
.wl mimo_txbw -1  
.wl band b  
.wl chanspec -c 7 -b 2 -w 20
```

←set Tx channel

```
.wl up  
.wl chanspec  
.wl sgi_tx 0  
.wl nrate -r 11  
.wl txant 0  
.wl antdiv 0  
.wl cur_etheraddr 00:11:22:33:44:55  
.wl pkteng_start 00:11:22:33:44:55 rx
```

←set Tx data rate

←set Tx path 0: port 0, 1:port 1, 3: dual port

←set Tx path 0: port 0, 1:port 1, 3: dual port

This will enter 11Mbps, Channel 7 receive mode.

./wl antdiv 3 ←set Tx path 0: port 0, 1:port 1, 3: dual port  
./wl cur_etheraddr 00:11:22:33:44:55  
./wl pkteng_start 00:11:22:33:44:55 rx
```

The default MAC address is 001122334455. Packets sent from Signal Generator **must** have the same MAC address as the DUT's MAC address (Runtime mac address can be overrode by using wl cur_etheraddr xx:xx:xx:xx:xx:xx).

4. Use "wl counters" and find the received frame numbers in "pktengrxducast".

5. The RX PER = [(Total lost packets at the receiver) / (Total sent packets from the Signal Generator)] x 100%.

Thus, PER = 100% - [(pktengrxducast numbers after sequence play) – (pktengrxducast numbers before sequence play)] / (Total sent packets from the signal Generator) x 100%.

A simple PER calculation tool (fer.exe) can help you do the job:

NOTE: The fer.exe must be located with wl.exe in the same directory.

EUT plug-out

./wl down

rmod dh

3. Bluetooth Basic Test

* J5/J1 setting as below

*Must connect USB to PC

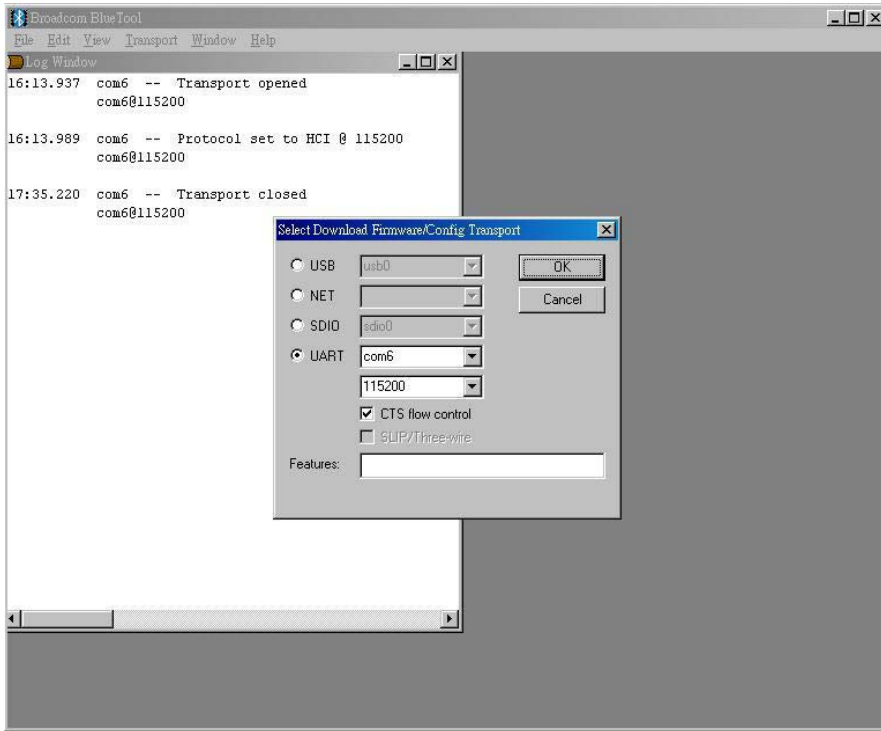

3-1. Download Mini-driver

1. Start Broadcom BlueTool.
2. On the **View** menu, click **Log Windows Details**.
3. On the **Transport** menu, click **HCI Control**.

- c. In the Baud list, type **115200**.
 - d. Select the **CTS flow control** check box.
 - e. Click **OK**.
5. In HCI Control, select the **HCI protocol active** check box

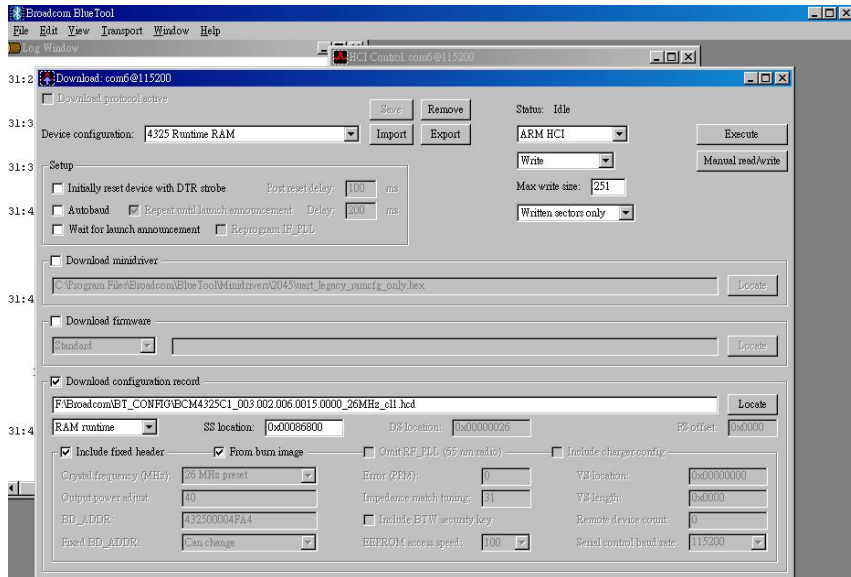

6. In the HCI Control commands list, select **0: Vendor-specific Commands (0 key)**, and then double-click **Download Minidriver**.
7. On the **Transport** menu, click **Download Firmware/Config**.
8. In **Select Download Firmware/Config Transport**:

- a. Select **UART** as the type of transport.
- b. In the COM port list, select **com6**.
- c. In the Baud list box, type **115200**.
- d. Select the **CTS flow control** check box.
- e. Click **OK**.

9. In Download, configure the settings to match those shown below

10. Click **Execute**.
11. Select the **HCI protocol active** check box

Throughput Test

Bluetool contains a throughput test feature that can be used with two or more AW-AM691NF devices. Note that each device runs on a separate PC with BlueTool installed. This document will provide basic directions for setting-up and running this test.

The next step in setting-up the test is establishing a connection between the devices.

ESTABLISH A BLUETOOTH CONNECTION BETWEEN TWO USB DEVICES

SET UP THE SLAVE DEVICE FIRST

1. On the **Slave** side, start Bluetool from the Start Menu.
2. If the Log Window is not already open, select “View” and then select “Log Window”. Select “Transport” and then Select “HCI Control.” New window pop-up, select “UART” and enter com port number. Click “OK”.

3. Download mini driver (see 3.1)
4. In the “HCI Control” window, select “7.3 Host Controller & Baseband Commands” (Note: may be 4.3, depending on version)
5. Double Click the “Write Scan Enable” entry
6. Select “Inquiry and Page Scan Enabled” and click “OK”
7. Double Click “Set Event Filter”
8. Select “Connection Setup”
9. Select “Allow Connections from all devices”
10. Select “Do Auto accept the connection with role switch disabled”
11. Click “OK”
12. In the “HCI Control” window, select “0 Vendor-specific commands”.
13. Double Click the “Write_BD_ADDR” command
14. Enter 001122334455
15. In the “HCI Control” window, select “0 Vendor-specific commands”. Double Click “Update UART Baud Rate”. Select 3000000 then click OK.

SET UP THE MASTER DEVICE, AND CREATE THE CONNECTION

1. On the **Master** side, start Bluetooth.
2. Open the log window, if not already open, and open the UART HCI Transport.
3. Download mini driver (see 3.1)
4. In the “HCI Control” window, select “7.1 Link Control Commands” (Note: may be 4.5 depending on version)
5. Double Click “Create Connection” and put BD address of the slave device into the BDADDR box. Click “OK”
6. In the “HCI Control” window, select “0 Vendor-specific commands”. Double Click “Update UART Baud Rate”. Select 3000000 then click OK.

A connection should establish now. This can be verified by looking in the log windows for both devices, which should now contain Connection Complete events with “Success” in the status field.

NOTE: once the connection has been established, Inquiry and Page Scan can be disabled. Also, go to: “7.3 Host Controller & Baseband Commands” →→ “Set Event Filter”. Select “Connection Setup”; Select “Allow

Connections from all devices”; Select “Do NOT Auto accept the connection” and hit ‘OK’. This will make the slave device non-discoverable and increase throughput by reducing overhead.

SET UP AND EXECUTE THE THROUGHPUT TEST

SET UP THE SLAVE AS THE RECEIVER

1. On the **Slave** side, select “Transport” and then select “Throughput Tests”. Select UART.
2. In the “Receive Test” (Bottom half of the window), fill in a data pattern such as “abcdef”, and fill in a count such as “1000000”
3. Close the “Log Window.” If this window is left open or minimized, then the throughput test will not achieve maximum throughput because of delay that is added by Windows every time the log window is updated.

SET UP THE MASTER AS THE TRANSMITTER AND START THE TEST

1. On the **Master** side, select “Transport” and then select “Throughput Tests”. Select UART.
 2. In the “Transmit Test” window (top half of the window), fill in the same data pattern and count that was filled in for the receive test on the **Slave** side.
 3. Close the “Log Window.” If this window is left open or minimized, then the throughput test will not achieve maximum throughput because of delay that is added by Windows every time the log window is updated.
 4. On the **Slave** side, click “Execute Test” in the “Receive Test” window.
 5. On the **Master** side, click “Execute Test” in the “Transmit Test” window.
- Bluetooth throughput test is now running.

To stop the test, click “Abort Test” on the Master side first, then on the slave side.

RF Performance Test

The following procedure explains how to configure the AW-AM691NF for RF testing using Broadcom BlueTool. At the completion of the procedure, connect the Bluetooth test instrument to the AW-AM691NF with RF cable and performs the RF tests.

RESETTING THE USB DEVICE

To reset the USB device

- In **HCI Control**, in the HCI Control commands list, select **7.3: Host Controller & Baseband Commands (3 key)**, and then double-click **Reset**.

READING THE BLUETOOTH DEVICE ADDRESS

To read the Bluetooth Device Address

- In HCI Control, in the HCI Control commands list, select **7.4: Informational Parameters (4 key)**, and then double-click

Read_BD_ADDR.

The Bluetooth Device Address (BD_ADDR) is displayed in the log window. The Bluetooth Device Address might be needed

by the Bluetooth tester

SETTING THE EVENT FILTER TO AUTOMATICALLY ALLOW CONNECTION

To set the event filter to automatically allow connection

1. In HCI Control, in the HCI Control commands list, select **7.3: Host Controller & Baseband Commands (3 key)**, and then double-click **Set_Event_Filter**.
2. In HCI Command: Set_Event_Filter:
 - a. In the **Filter_Type** list, select **Connection Setup**.
 - b. In the **Connection_Setup_Filter_Condition_Type** list, select **Allow Connections from all devices**.
 - c. In the **Auto_Accept_Flag** list, select **Do Auto accept the connection with role switch disabled**.

ENABLING WRITE SCAN

To enable Write Scan

1. In HCI Control, in the HCI Control commands list, select **7.3: Host Controller & Baseband Commands (3 key)**, and then double-click **Write_Scan_Enable**.
2. In HCI Command: Write_Scan_Enable, in the **Scan_Enable** list, select **Inquiry and Page Scan enabled**.

ENABLING TEST MODE

To enable Test Mode

- In HCI Control, in the HCI Control commands list, select **7.6: Testing Commands (6 key)**, and then double-click

Enable_Device_Under_Test_Mode.

The AW-AM691NF is now ready to receive a connection request from the Bluetooth tester and begin testing specified RF parameters.

4. Known Limitations

*For **PC** test scenario. AW-AM691NF **only** support the following Host Controller IC:

PCI\VEN_1095&DEV_0670 ;Arasan SDIO HC

PCI\VEN_104C&DEV_803B ;TI Std SDIO HC

PCI\VEN_104C&DEV_803C ;TI Std SDIO HC

PCI\VEN_104C&DEV_8033 ;TI Std SDIO HC

PCI\VEN_104C&DEV_8034 ;TI Std SDIO HC

PCI\VEN_1180&DEV_0822 ;Ricoh Std SDIO HC

*WinXP,WIN7 WLAN drivers are not supported

Federal Communication Commission Interference Statement

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

FCC Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

Operations in the 5.15-5.25GHz band are restricted to indoor usage only.

Radiation Exposure Statement:

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.

This device is intended only for OEM integrators under the following conditions:

- 1) The antenna must be installed such that 20 cm is maintained between the antenna and users, and
- 2) The transmitter module may not be co-located with any other transmitter or antenna.

As long as 2 conditions above are met, further transmitter test will not be required. However, the OEM integrator is still responsible for testing their end-product for any additional compliance requirements required with this module installed

IMPORTANT NOTE: In the event that these conditions can not be met (for example certain laptop configurations or co-location with another transmitter), then the FCC authorization is no longer considered valid and the FCC ID can not be used on the final product. In these circumstances, the OEM integrator will be responsible for re-evaluating the end product (including the transmitter) and obtaining a separate FCC authorization.

End Product Labeling

This transmitter module is authorized only for use in device where the antenna may be installed such that 20 cm may be maintained between the antenna and users. The final end product must be labeled in a visible area with the following: "Contains FCC ID: TLZ-AM691NF". The grantee's FCC ID can be used only when all FCC compliance requirements are met.

Manual Information To the End User

The OEM integrator has to be aware not to provide information to the end user regarding how to install or remove this RF module in the user's manual of the end product which integrates this module.

The end user manual shall include all required regulatory information/warning as show in this manual.

Industry Canada statement:

This device complies with RSS-210 of the Industry Canada Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Ce dispositif est conforme à la norme CNR-210 d'Industrie Canada applicable aux appareils radio exempts de licence. Son fonctionnement est sujet aux deux conditions suivantes: (1) le dispositif ne doit pas produire de brouillage préjudiciable, et (2) ce dispositif doit accepter tout brouillage reçu, y compris un brouillage susceptible de provoquer un fonctionnement indésirable.

Radiation Exposure Statement:

This equipment complies with IC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.

Déclaration d'exposition aux radiations:

Cet équipement est conforme aux limites d'exposition aux rayonnements IC établies pour un environnement non contrôlé. Cet équipement doit être installé et utilisé avec un minimum de 20 cm de distance entre la source de rayonnement et votre corps.

This device is intended only for OEM integrators under the following conditions: (For module device use)

- 1) The antenna must be installed such that 20 cm is maintained between the antenna and users, and
- 2) The transmitter module may not be co-located with any other transmitter or antenna.

As long as 2 conditions above are met, further transmitter test will not be required. However, the OEM integrator is still responsible for testing their end-product for any additional compliance requirements required with this module installed.

Cet appareil est conçu uniquement pour les intégrateurs OEM dans les conditions suivantes: (Pour utilisation de dispositif module)

- 1) L'antenne doit être installée de telle sorte qu'une distance de 20 cm est respectée entre l'antenne et les utilisateurs, et
- 2) Le module émetteur peut ne pas être coïmplanté avec un autre émetteur ou antenne.

Tant que les 2 conditions ci-dessus sont remplies, des essais supplémentaires sur l'émetteur ne seront pas nécessaires. Toutefois, l'intégrateur OEM est toujours responsable des essais sur son produit final pour toutes exigences de conformité supplémentaires requis pour ce module installé.

IMPORTANT NOTE:

In the event that these conditions can not be met (for example certain laptop configurations or co-location with another transmitter), then the Canada authorization is no longer considered valid and the IC ID can not be used on the final product. In these circumstances, the OEM integrator will be responsible for re-evaluating the end product (including the transmitter) and obtaining a separate Canada authorization.

NOTE IMPORTANTE:

Dans le cas où ces conditions ne peuvent être satisfaites (par exemple pour certaines configurations d'ordinateur portable ou de certaines co-localisation avec un autre émetteur), l'autorisation du Canada n'est plus considéré comme valide et l'ID IC ne peut pas être utilisé sur le produit final. Dans ces circonstances, l'intégrateur OEM sera chargé de réévaluer le produit final (y compris l'émetteur) et l'obtention d'une autorisation distincte au Canada.

End Product Labeling

This transmitter module is authorized only for use in device where the antenna may be installed such that 20 cm may be maintained between the antenna and users. The final end product must be labeled in a visible area with the following: "Contains IC: 6100A-AM691NF".

Plaque signalétique du produit final

Ce module émetteur est autorisé uniquement pour une utilisation dans un dispositif où l'antenne peut être installée de telle sorte qu'une distance de 20cm peut être maintenue entre l'antenne et les utilisateurs. Le produit final doit être étiqueté dans un endroit visible avec l'inscription suivante: "Contient des IC: 6100A-AM691NF".

Manual Information To the End User

The OEM integrator has to be aware not to provide information to the end user regarding how to install or remove this RF module in the user's manual of the end product which integrates this module.

The end user manual shall include all required regulatory information/warning as show in this manual.

Manuel d'information à l'utilisateur final

L'intégrateur OEM doit être conscient de ne pas fournir des informations à l'utilisateur final quant à la façon d'installer ou de supprimer ce module RF dans le manuel de l'utilisateur du produit final qui intègre ce module.

Le manuel de l'utilisateur final doit inclure toutes les informations réglementaires requises et avertissements comme indiqué dans ce manuel.

低功率電波輻射性電機管理辦法⁴

第十二條 經型式認證合格之低功率射頻電機，非經許可，公司、商號或使用者均不得擅自變更頻率、加大功率或變更原設計之特性及功能。⁴

第十四條 低功率射頻電機之使用不得影響飛航安全及干擾合法通信；經發現有干擾現象時，應立即停用，並改善至無干擾時方得繼續使用。⁴

前項合法通信，指依電信法規定作業之無線電通信。⁴

低功率射頻電機須忍受合法通信或工業、科學及醫療用電波輻射性電機設備之干擾。⁴

在 5.25-5.35 兆赫頻帶內操作之無線資訊傳輸設備，限於室內使用。⁴

1. 本模組於取得認證後將依規定於模組本體標示審驗合格標籤。⁴

2. 系統廠商應於平台上標示「本產品內含射頻模組：「XXXyyyLPDzzzz-x」字樣。⁴
