Kit reference: 085K048

This kit includes :

- > 1 Tablet RF Reader made of a reader and a linked antenna
- > 1 USB cable
- > 1 Power supply (90-240V)
- > 1 Application CD

Tablet was designed to work :

- With any PCSC 1.0 compliant software including :
- > Golden Reader V 2.5
 - > InterFest Test Software v2.0.2

Security Instruction

Tablet was designed to be plugged to USB 1.0 or 2.0 host products only.

Installation

Follow installation guide instructions before connecting the reader.

Warning

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment

Repairs

Repairs should only be performed by qualified technicians only. During warranty period, the product should be returned to id3 semiconductors official distributor for repair purpose. Warranty voids if the product is not properly used or if installation instructions are not respected.

FCC COMPLIANCE

This device complies with part 15 of the FCC Rules.

Operation is subject to follow two conditions :

- (1) This device may not cause harmful interference, and
- (2) This device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instruction, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception which can be determined by turning the equipment off and on, the user is encouraged to try to correct interference by one or more of the following measures:
- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

1.4. Test Methodology

Both conducted and radiated testing were performed according to the procedures in ANSI C63.4-2003, FCC Part 15 Subpart C.

Radiated testing was performed at an antenna to EUT distance of 10 meters ($F < 30\text{MHz}$) and 3m ($F > 30\text{MHz}$). During testing, all equipment's and cables were moved relative to each other in order to identify the worst case set-up.

Frequency band investigated was 9kHz to 2GHz.

1.5. Test facility

Tests have been performed on January 31st to February 3rd, 2006.

This test facility has been fully described in a report and accepted by FCC as compliant with the radiated and AC line conducted test site criteria in ANSI C63.4-2003 in a letter dated July 14, 2005 (registration number 94821).

This test facility has also been accredited by COFRAC (French accreditation authority for European union test lab accreditation organization) according to NF EN ISO/IEC 17025, accreditation number 1-1633 as compliant with test site criteria and competence in 47 CFR Part 15/ANSI C63.4 and EN55022/CISPR22 norms for 89/336/EEC European EMC Directive application. All pertinent data for this test facility remains unchanged.
