Applicant: Trane, a Division of American Standard

E-Mail: manelson@trane.com

Subject: Job Number 2516UC5 for Trane FCC ID: TPF-13651127.

Dear Mr Clavier:

The following explanations will hopefully answer your questions/concerns for job number 2516UC5.

The power levels for channels 14, 15, and 16 will be controlled via software that is being developed internally at Trane. This software will then be used to set the channels of 14, 15, and 16 by the board assembly manufacturer prior to shipment to Trane.

The device is being developed for Trane's use only and is not intended to be sold to an integrator/second OEM.

I trust these explanations answer your questions.

Sincerely yours,

Marlon Nelson
Hardware Engineer / Trane, a Division of American Standard
