TEST REPORT

of

FCC Part 15 Subpart C §15.247

FCC ID: TQ8-ADB10SWEN

Equipment Under Test : DISPLAY CAR SYSTEM

Model Name

: ADB10SWEN

Variant Model Name(s): ADB12SWEN

Applicant

: HYUNDAI MOBIS CO., LTD.

Manufacturer

: Hyundai Mobis Co., Ltd.

Date of Receipt

: 2023.03.13

Date of Test(s)

: 2023.03.13 ~ 2023.04.24

Date of Issue

: 2023.04.25

In the configuration tested, the EUT complied with the standards specified above. This test report does not assure KOLAS accreditation.

1) The results of this test report are effective only to the items tested.

Murphy Kim

- 2) The SGS Korea is not responsible for the sampling, the results of this test report apply to the sample as received.
- 3) This test report cannot be reproduced, except in full, without prior written permission of the Company.
- 4) The data marked * in this report was provided by the customer and may affect the validity of the test results. We are responsible for all the information of this test report except for the data(*) provided by the customer.

Tested by:

1.6. Summary of Test Results

The EUT has been tested according to the following specifications:

APPLIED STANDARD: Part15 Subpart C							
Section	Test Item(s)	Result					
15.205(a) 15.209 15.247(d)	Transmitter Radiated Spurious Emissions and Conducted Spurious Emission	Complied					
15.247(a)(2)	6 dB Bandwidth	Complied					
15.247(b)(3)	Maximum Peak Conducted Output Power	Complied					
15.247(e)	Power Spectral Density	Complied					
15.207	AC Power Line Conducted Emission	N/A ¹⁾					

Note:

1) The AC power line test was not performed because the EUT use battery power for operation and which do not operate from the AC power lines.

1.7. Test Procedure(s)

The measurement procedures described in the American National Standard of Procedure for Compliance Testing of unlicensed Wireless Devices (ANSI C63.10-2013) and the guidance provided in KDB 558074 D01 15.247 Meas Guidance v05r02 were used in the measurement of the DUT.

1.8. Sample Calculation

Where relevant, the following sample calculation is provided:

1.8.1. Conducted Test

Offset value (dB) = Attenuator (dB) + Cable loss (dB)

1.8.2. Radiation Test

Field strength level ($dB\mu V/m$) = Measured level ($dB\mu V$) + Antenna factor (dB/m) + Cable loss (dB) - Amplifier gain (dB) + Duty factor (dB)

1.9. Information of software for test

- Operating software of EUT has integrated test interface. No additional software was used.

4, LS-ro 182beon-gil, Gunpo-si, Gyeonggi-do, Korea, 15807 Tel. +82 31 428 5700 / Fax. +82 31 427 2370 http://www.sgsgroup.kr

Report Number: F690501-RF-RTL004012 Page: 6 of 50

1.10. Test Report Revision

Revision	Report Number	Date of Issue	Description	
0	F690501-RF-RTL004012	2023.04.25	Initial	

1.11. Measurement Uncertainty

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the apparatus:

Parameter	Uncertainty			
Maximum Peak Conducted Output Power		0.33 dB		
Power Spectral Density		0.64 dB		
6 dB Bandwidth		0.01 MHz		
Conducted Spurious Emission	0.79 dB			
Dedicted Emission O. W. to 20 Mile	Н	3.40 dB		
Radiated Emission, 9 kHz to 30 MHz	V	3.40 dB		
Padiated Emission, halow 1. Mr.	Н	4.50 dB		
Radiated Emission, below 1	V	5.10 dB		
Padiated Emission, above 1 Cily	Н	3.70 dB		
Radiated Emission, above 1 @lz	V	3.90 dB		

All measurement uncertainty values are shown with a coverage factor k = 2 to indicate a 95 % level of confidence.

4, LS-ro 182beon-gil, Gunpo-si, Gyeonggi-do, Korea, 15807 Tel. +82 31 428 5700 / Fax. +82 31 427 2370 http://www.sgsgroup.kr

Report Number: F690501-RF-RTL004012 Page: 7 of 50

1.12. Worst-Case Configuration and Test Mode

11b mode:

We found out the test mode with the highest power level after we analyze all the data rates. 1 Mbps data rate among 1 Mbps, 2 Mbps, 5.5 Mbps and 11 Mbps is chosen as worst case.

11g mode:

We found out the test mode with the highest power level after we analyze all the data rates. 6 Mbps data rate among 6 Mbps, 9 Mbps, 12 Mbps, 18 Mbps, 24 Mbps, 36 Mbps, 48 Mbps and 54 Mbps is chosen as worst case.

11n HT20 mode:

We found out the test mode with the highest power level after we analyze all the data rates. MCS0 data rate among MCS0, MCS1, MCS3, MCS4, MCS5, MCS6 and MCS7 is chosen as worst case.

Radiated emission above 1 @ was performed with the EUT set to transmit Low/Middle/High Channels.

Conducted tests were performed with the EUT set to transmit Low/Middle/High channels with highest output power.

1.13. Description of Variant Models

Mo	del Names		Description									
IVIO	uei ivailles	BT	Area	Freqeuncy	ADM	DAB	RDS	RHD/LHD	ARKAMYS	USB		
Basic Model	ADB10SWEN	0	Europe (Latin America)	A2	0	Х	Х	LHD	Х	0		
Variant Model	ADB12SWEN	0	Europe (Latin America)	A2	0	Х	X	RHD	Х	0		

Note;

All the test was performed with basic model.

4, LS-ro 182beon-gil, Gunpo-si, Gyeonggi-do, Korea, 15807 Tel. +82 31 428 5700 / Fax. +82 31 427 2370 http://www.sgsgroup.kr

Report Number: F690501-RF-RTL004012 Page: 8 of 50

1.14. Duty Cycle of EUT

Regarding to KDB 558074 D01 15.247 Meas Guidance v05r02, 6, the maximum duty cycles of all modes were investigated and set the spectrum analyzer as below;

Set RBW ≥ OBW if possible; otherwise, set RBW to the largest available value. Set detector = peak or average. The zero-span measurement method shall not be used unless both RBW and VBW are > 50/T and the number of sweep points across duration T exceeds 100.

Mode	Data Rate (Mbps)	Duty Cycle (%)	Correction Factor (dB)
11b	1	99.04	0
11g	6	95.38	0.21
11n_HT20	MCS0	95.05	0.22

Remark;

- 1. As measured duty cycles of EUT, all of mode and data rate keeps constant period and are converted to log scale (power averaging) to compensate correction factor to result of average test items.
- 2. Duty Cycle (%) = $(Tx \text{ on time } / Tx \text{ on + off time}) \times 100$
- 3. Correction Factor (dB) = 10 log (1 / Duty Cycle)

- Test plots

2. Transmitter Radiated Spurious Emissions and Conducted Spurious Emissions

2.1. Test Setup

2.1.1. Transmitter Radiated Spurious Emissions

The diagram below shows the test setup that is utilized to make the measurements for emission from 9 $\,\mathrm{kl}$ to 30 $\,\mathrm{m}$ emissions.

The diagram below shows the test setup that is utilized to make the measurements for emission from 30 $\,\text{Mz}$ to 1 $\,\text{GHz}$ emissions.

4, LS-ro 182beon-gil, Gunpo-si, Gyeonggi-do, Korea, 15807 Tel. +82 31 428 5700 / Fax. +82 31 427 2370 http://www.sgsgroup.kr

Report Number: F690501-RF-RTL004012 Page: 11 of 50

The diagram below shows the test setup that is utilized to make the measurements for emission .The spurious emissions were investigated form 1 \oplus to the 10th harmonic of the highest fundamental frequency or 40 \oplus whichever is lower.

4, LS-ro 182beon-gil, Gunpo-si, Gyeonggi-do, Korea, 15807 Tel. +82 31 428 5700 / Fax. +82 31 427 2370 http://www.sgsgroup.kr

Report Number: F690501-RF-RTL004012 Page: 12 of 50

2.1.2. Conducted Spurious Emissions

2.2. Limit

According to §15.247(d), in any 100 klb bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 klb bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20 dB. Attenuation below the general limits specified in §15.209(a) is not required. In addition, radiated emission which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a) (see §15.205(c)).

According to §15.209(a), except as provided elsewhere in this subpart, the emissions from an intentional radiator shall not exceed the field strength levels specified in the following table:

Frequency (账)	Field Strength $(\mu V/m)$	Measurement Distance (Meters)
0.009-0.490	2 400/F(klb)	300
0.490-1.705	24 000/F(klb)	30
1.705-30.0	30	30
30-88	100**	3
88-216	150**	3
216-960	200**	3
Above 960	500	3

^{**} Except as provided in paragraph (g), fundamental emissions from intentional radiators operating under this section shall not be located in the frequency bands 54-72 Mb, 76-88 Mb, 174-216 Mb or 470-806 Mb. However, operation within these frequency bands is permitted under other sections of this part, e.g., §§15.231 and 15.241.

4, LS-ro 182beon-gil, Gunpo-si, Gyeonggi-do, Korea, 15807 Tel. +82 31 428 5700 / Fax. +82 31 427 2370 http://www.sgsgroup.kr

Report Number: F690501-RF-RTL004012 Page: 13 of 50

2.3. Test Procedures

Radiated emissions from the EUT were measured according to the dictates in section 11.11 & 11.12 of ANSI C63.10-2013.

2.3.1. Test Procedures for emission below 30 Mb

- 1. The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter anechoic chamber test site. The table was rotated 360 degrees to determine the position of the highest radiation.
- 2. Then antenna is a loop antenna is fixed at one meter above the ground to determine the maximum value of the field strength. Both parallel and perpendicular of the antenna are set to make the measurement.
- 3. For each suspected emission, the EUT was arranged to its worst case and then the table was turned from 0 degrees to 360 degrees to find the maximum reading.
- 4. The test-receiver system was set to average or quasi peak detect function and Specified Bandwidth with Maximum Hold Mode.

2.3.2. Test Procedures for emission from above 30 Mb

- 2. During performing radiated emission below 1 GHz, the EUT was set 3 meters away from the interference receiving antenna, which was mounted on the top of a variable-height antenna tower. During performing radiated emission above 1 GHz, the EUT was set 3 meter away from the interference-receiving antenna.
- 3. The antenna is a bi-log antenna, a horn antenna and its height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- 4. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the table was turned from 0 degrees to 360 degrees to find the maximum reading.
- 5. For measurements below 1 @ resolution bandwidth is set to 100 decirity for peak detection measurements or 120 decirity for quasi-peak detection measurements. Peak detection is used unless otherwise noted as quasi-peak.
- 6. For measurements Above 1 @ resolution bandwidth is set to 1 \, the video bandwidth is set to 3 \, for peak measurements and as applicable for average measurements.

4, LS-ro 182beon-gil, Gunpo-si, Gyeonggi-do, Korea, 15807 Tel. +82 31 428 5700 / Fax. +82 31 427 2370 http://www.sgsgroup.kr

Report Number: F690501-RF-RTL004012 Page: 14 of 50

2.3.3. Test Procedures for Radaiated Spurious Emissions

- 1. Unwanted Emissions into Non-Restricted Frequency Bands
- The Reference Level Measurement refer to section 11.11.2 Set analyzer center frequency to DTS channel center frequency, SPAN \geq 1.5 times the DTS bandwidth, the RBW = 100 kHz and VBW \geq 3 x RBW, Detector = Peak, Sweep time = Auto couple, Trace = Max hold.
- Unwanted Emissions Level Measurement refer to section 11.11.3 Set the center frequency and span to encompass frequency range to be measured, the RBW = 100 $\,\mathrm{klz}$ and $\,\mathrm{VBW} \geq 3 \,\mathrm{x}$ RBW, Detector = Peak, Sweep time = Auto couple, Trace = Max hold.
- 2. Unwanted Emissions into Restricted Frequency Bands
- Peak Power measurement procedure refer to section 11.12.2.4 Set RBW = as specified in Table 9, VBW ≥ 3 x RBW, Detector = Peak, Sweep time = auto, Trace = Max hold.

Table 9 – RBW as a function of frequency

Frequency	RBW
9 kHz to 150 kHz	200 Hz to 300 Hz
0.15 MHz to 30 MHz	9 kHz to 10 kHz
30 MHz to 1 000 MHz	100 kHz to 120 kHz
> 1 000 MHz	1 MHz

If the peak – detected amplitude can be shown to comply with the average limit, then it is not necessary to perform a separate average measurement.

- Average Power measurements procedure refer to section 11.12.2.5.2 The EUT shall be configured to operate at the maximum achievable duty cycle. Measure the duty cycle D of the transmitter output signal as described in section 11.6. Set RBW = 1 Mz, VBW \geq 3 x RBW, Detector = RMS, if span / (# of points in sweep) \leq (RBW/2). Satisfying this condition may require increasing the number of points in the sweep or reducing the span. If this condition cannot be satisfied then the detector mode shall be set to peak.

Averaging type = power (i.e., RMS).

As an alternative the detector and averaging type may be set for linear voltage averaging. Some instruments require linear display mode in order to use linear voltage averaging. Log or dB averaging shall not be used. Sweep time = auto, Perform a trace average of at least 100 traces.

A correction factor shall be added to the measurement results prior to comparing to the emission limit in order to compute the emission level that would have been measured had the test been performed at 100 percent duty cycle. The correction factor is computed as follows:

- 1) If power averaging (rms) mode was used in step f), then the applicable correction factor is [10 log(1 / D)], where D is the duty cycle.
- 2) If a specific emission is demonstrated to be continuous (D ≥ 98 %) rather than turning ON and OFF with the transmit cycle, then no duty cycle correction is required for that emission.
- 3. Definition of DUT Axis.

The test orthogonal plan of EUT was investigated with three axis described in the test setup photo. The X-axis was worst-case, all radiated testing of EUT was performed with **X-axis**.

4, LS-ro 182beon-gil, Gunpo-si, Gyeonggi-do, Korea, 15807 Tel. +82 31 428 5700 / Fax. +82 31 427 2370 http://www.sgsgroup.kr

Report Number: F690501-RF-RTL004012 Page: 15 of 50

2.3.4. Test Procedures for Conducted Spurious Emissions

All data rates and modes were investigated for conducted spurious emissions.

Per the guidance of ANSI C63.10-2013, section 11.11.1 & 11.11.2 & 11.11.3, the reference level for out of band emissions is established from the plots of this section since the band edge emissions are measured with a RBW of 100 kHz. This reference level is then used as the limit in subsequent plots for out of band spurious emissions shown in section 2.4.3. The limit for out of band spurious emission at the band edge is 20 dB below the fundamental emission level measured in a 100 kHz bandwidth.

1. Conducted Emissions at Band Edge

- The Measurement refer to section 11.11.3

Set the center frequency and span to encompass frequency range to be measured, the RBW = 100 klb and VBW ≥ 3 x RBW, Detector = Peak, Sweep time = Auto couple, Trace mode = Max hold, The trace was allowed to stabilize.

2. Conducted Spurious Emissions

- The Measurement refer to section 11.11.3

Start frequency was set to 9 № and stop frequency was set to 25 № (separated into two plots per channel), RBW = 1 №, VBW ≥ 3 x RBW, Detector = Peak, Sweep time = Auto couple, Trace = Max hold, The trace was allowed to stabilize.

3. TDF function

- For plots showing conducted spurious emissions from 9 \(\preceq\) to 25 \(\mathrev{GHz}\), all path loss of wide frequency range was investigated and compensated to spectrum analyzer as TDF function.

So, the reading values shown in plots were final result.

4, LS-ro 182beon-gil, Gunpo-si, Gyeonggi-do, Korea, 15807 Tel. +82 31 428 5700 / Fax. +82 31 427 2370 http://www.sgsgroup.kr

2.4. Test Results

Ambient temperature : **(23** ± **1)** ℃ Relative humidity : 47 % R.H.

2.4.1. Radiated Spurious Emission below 1 000 Mb

The frequency spectrum from 9 kHz to 1 000 MHz was investigated. All reading values are peak values.

Radiated Emissions		Ant	t Correction Factors		Total	Limi	Limit	
Frequency (Mb)	Reading (dBµV)	Detect Mode	Pol.	AF (dB/ m)	AMP + CL (dB)	Actual (dΒμV/m)	Limit (dΒμV/m)	Margin (dB)
44.79	34.40	Peak	V	19.38	-27.40	26.38	40.00	13.62
151.01	40.90	Peak	Н	13.80	-26.58	28.12	43.50	15.38
266.88	35.50	Peak	Н	18.24	-25.61	28.13	46.00	17.87
344.89	36.90	Peak	Н	20.64	-25.11	32.43	46.00	13.57
932.99	32.50	Peak	Н	28.10	-24.35	36.25	46.00	9.75
945.40	34.20	Peak	V	27.93	-24.38	<u>37.75</u>	46.00	8.25

Remark;

- 1. Spurious emissions for all channels were investigated and almost the same below 1 强.
- Test from 30 Mb to 1 000 Mb was performed using the software of EP5RE(V5.3.70) from TOYO.
- Reported spurious emissions are in 11n20 HT20 / Low channel as worst case among other modes.
- Radiated spurious emission measurement as below. (Actual = Reading + AF + AMP + CL)
- According to §15.31(o), emission levels are not report much lower than the limits by over 20 dB.

Remarks;

- 1. "*" means the restricted band.
- 3. Radiated emissions measured in frequency above 1 000 Mb were made with an instrument using peak/average detector mode.
- 4. Actual = Reading + AF + CL + (DF) or Reading + AF + AMP + CL + (DF).
- 5. According to § 15.31(o), emission levels are not reported much lower than the limits by over 20 dB.
- 6. The maximized peak measured value complies with the average limit, to perform an average measurement is unnecessary.
