FCC ID:	TTUCR870-2Q
Date:	March 08, 2012

Comments	Quietek Lab.
<p>1. Please provide MPE analysis. Note that the sample analysis sent in via e-mail contains an error - the numbers in the 4th column of the tables on Page 3 are not distances as indicated in the footnote for the 1 mW/cm² limit but instead the power density at 20 cm.</p>	<p>Please see the revised RF Exposure report</p>
<p>2. Page 29 of the OEM/ODM User's Manual contains antenna listing for compliance to Industry Canada regulation. Similar information is needed in the FCC sections. The FCC test report on Page 5 does contain such list. To avoid confusion, the grantee should revise the user's manual. Furthermore, the module's antenna connector is a standard UFL connector, hence it is important to let OEM/ODM who plans to build products for the US market knows the limitation on antenna selection.</p>	<p>Please see the revised manual.</p> <p>Antenna listing information for FCC sections is added on page 28/29.</p>
<p>3. The grantee is currently using the manufacturer user's manual which is a BridgeCo confidential and copyrighted document (see Page 26 copyright statements). The grantee should present its own user's manual or obtain authorization, including scope of authorization, from the copyright holder.</p>	<p>Please see POA letter.</p>
