Federal Communications Commission
7435 Oakland Mills Road
Columbia, MD 21046

To whom it may concern:

L-3 communications security & Detection systems, hereby requests a Permissive Change Class II of the radio equipment certification for the ProVision certification number, FCC ID: TUZ-S-100. This product differs from the originally approved product in the following manor:

- a) Associated digital circuitry. – The radio IF components are the same, changing only the PCB layout, resistor and capacitor values are the same; however size of most resistor and capacitors changed from 0603 surface mount components to 0402 sizes. For one 70 MHz splitter we have changed vendors due to obsolescence.
- b) Antenna Characteristics. –There are no changes to this section.
- c) Cosmetic differences – Enclosure is ALUM 5052 thickness 0.080 inches. Overall Dimension 11.196 x 9.160 x 1.306 inches. Side Ventilation holes two sides covering an area of 8.25 x .75 inches. Hole size is 0.150 inches, There are no fans.

I do attest that the Field strength and/or RF Output readings remained the same or are lower than the originally approved product and that they did not increase therefore qualifying this product for this application type.

Sincerely,

A handwritten signature in black ink, appearing to read 'Scott Trospen', with a long horizontal flourish extending to the right.

Scott Trospen
