#### **Forward**

The following information is submitted for consideration in obtaining Grant of Certification for License Exempt, 2x2 MIMO (Multiple Input Multiple Output) Digital Transmission System Intentional Radiator operating under CFR 47 Paragraph 15.247.

Name of Applicant: Mikrotikls SIA

Pernavas 46

Riga, Latvia LV-1009

Model: RB912G-2HPnD

FCC I.D.: TV7RB912G-2HPND FRN: 0014 43 1100

Frequency Range: 2412-2462 MHz (5, 10, 20 MHz channel operation),

2422-2452 MHz (40 MHz channel operation)

Operating Power: 0.500 Watts output power per chain MIMO operation, 1.0 -Watt

maximum output combined chains

#### **Opinion / Interpretation of Results**

Tests Performed	Margin (dB)	Results
Emissions as per CFR 47 paragraphs 2 and 15.205	-0.1	Complies
Emissions as per CFR 47 paragraphs 2 and 15.207	-9.7	Complies
Emissions as per CFR 47 paragraphs 2 and 15.209	-2.0	Complies
Harmonic Emissions per CFR 47 15.247	-9.9	Complies
Peak Power Spectral Density per CFR 47 15.247	-3.7	Complies

#### **Application for Certification**

Manufacturer: Mikrotikls SIA (1)

Pernavas 46

Riga, Latvia LV-1009

(2) Identification: Model: RB912G-2HPnD

FCC I.D.: TV7RB912G-2HPND

(3) **Instruction Book:** 

Refer to Exhibit for Instruction Manual.

(4) Description of Circuit Functions:

Refer to Exhibit of Operational Description.

(5) Block Diagram with Frequencies:

Refer to Exhibit of Operational Description.

Report of Measurements: (6)

Report of measurements follows in this Report.

(7) Photographs: Construction, Component Placement, etc.:

Refer to Exhibit for photographs of equipment.

- (8) List of Peripheral Equipment Necessary for operation. The equipment operates from power received from authorized AC/DC power adapter. The EUT offers connection ports for optional USB memory Stick, power, network interface, and authorized antenna systems only. During testing, the EUT was connected to CPU through network cable. The EUT received power supplied from external AC/DC adapter.
- (9) Transition Provisions of CFR47 15.37 are not requested.
- (10)Not Applicable. The unit is not a scanning receiver.
- (11)Not Applicable. The EUT does not operate in the 59 - 64 GHz frequency band.
- (12)The equipment is not software defined and this section is not applicable.

#### Applicable Standards & Test Procedures

In accordance with the Federal Communications Code of Federal Regulations, dated October 1, 2011, Part 2, Subpart J, Paragraphs 2.907, 2.911, 2.913, 2.925, 2.926, 2.1031 through 2.1057, and applicable parts of paragraph 15, Part 15C Paragraph 15.247 the following information is submitted. Test procedures used are the established Methods of Measurement of Radio-Noise Emissions as described in the ANSI C63.4-2009 Document, FCC documents KDB 662911 and KDB 558074. Testing for the AC line-conducted emissions were performed as defined in sections 7 and 13.1.3, testing of the radiated emissions was performed as defined in sections 8 and 13.1.4 of ANSI C63.4-2009. Testing of the intentional radiated emissions was performed as defined in section 13 of ANSI C63.4-2009.

#### **Equipment Function and Configuration**

The EUT is a 2412-2462 MHz, 2x2 MIMO, Digital Transmission System used to transmit data in applications offering broadband wireless connectivity. The equipment is marketed for use to incorporate a wireless link to exchange data information from one point to another. Configuration software offers ability to define antenna and transmitter configuration. The EUT offers connection ports for authorized antenna systems, power, USB interface, and network only and requires power supplied from external source. No other interfacing options are provided on the EUT. The RB912G-2HPnD receives power from the supplied AC/DC power adapter connected to utility power systems. For testing purposes, the RB912G-2HPnD transceiver was connected to the manufacturer supplied AC/DC power adapter and communicating to the laptop computer through network interface. This configuration offered operational control of the transmitter and communications over the network interface between the EUT and supporting computer system. The device is marketed for professional installation and the antenna connection and options comply with the unique antenna connection requirements.

Revision 2

Mikrotikls SIA Model: RB912G-2HPnD Test #: 120713

Test to: CFR47 (15.247) File: Mikrotikls RB912G2HPnD TstRpt 120713 r2 Page 7 of 44

SN: 3D640002341D FCC ID#: TV7RB912G-2HPND

#### **Equipment Configuration**

#### **Test Site Locations**

Conducted EMI The AC power line conducted emissions testing performed in a shielded

screen room located at Rogers Labs, Inc., 4405 W. 259<sup>th</sup> Terrace,

Louisburg, KS

Radiated EMI The radiated emissions tests were performed at the 3 meters, Open Area

Test Site (OATS) located at Rogers Labs, Inc., 4405 W. 259th Terrace,

Louisburg, KS

Site Registration Refer to Annex for Site Registration Letters

NVLAP Accreditation Lab code 200087-0

#### **Units of Measurements**

Conducted EMI Data is in dBµV; dB referenced to one microvolt

Radiated EMI Data is in dBµV/m; dB/m referenced to one microvolt per meter

Sample Calculation:

RFS = Radiated Field Strength, FSM = Field Strength Measured

A.F. = Receive antenna factor, Gain = amplification gains and/or cable losses

RFS  $(dB\mu V/m @ 3m) = FSM (dB\mu V) + A.F. (dB) - Gain (dB)$

#### **Test Procedures**

#### AC Line Conducted Emission Test Procedure

The EUT operates from DC power only and must be connected to an authorized AC/DC adapter for operation. For testing purposes, the manufacturer supplied AC/DC power adapter was used to power the EUT and system. Testing for the AC line-conducted emissions testing was performed as defined in sections 7 and 13.1.3 of ANSI C63.4-2009. The test setup including the EUT was arranged in typical equipment configurations and placed on a 1 x 1.5-meter wooden bench, 0.8 meters high located in a screen room. The power lines of the system were isolated from the power source using a standard LISN with a 50- $\mu$ Hy choke. EMI was coupled to the spectrum analyzer through a 0.1  $\mu$ F capacitor internal to the LISN. The LISN was positioned on the floor beneath the wooden bench supporting the EUT. The power lines and cables were draped over the back edge of the table.

#### **Test arrangement for Conducted emissions**

- 1. Interconnecting cables that hang closer than 40 cm to the ground plane were folded back and forth in the center forming a bundle 30 cm to 40 cm long.
- 2. Input/output (I/O) cables that are not connected to a peripheral shall be bundled in the center. The end of the cable may be terminated, if required, using the correct terminating impedance. The overall length shall not exceed 1 m.
- 3. EUT connected to one LISN. Unused LISN measuring port connectors are terminated into 50  $\Omega$  loads. LISN is placed on top of and bonded to reference ground plane.
- 3.1 All other equipment powered from additional LISN(s).
- 3.2 Multiple outlet strips can be used for multiple power cords of non-EUT equipment.
- 3.3 LISN is positioned at least 80 cm from nearest part of EUT chassis.
- 4. Cables of hand-operated devices, such as keyboards, mice, and so on, shall be placed as for normal use.
- 5. Non-EUT components of EUT system being tested.
- 6. Rear of EUT, including peripherals, shall all be aligned and flush with rear of tabletop.
- 7. Rear of tabletop shall be 40 cm removed from a vertical conducting plane that is bonded to the ground plane (see 5.2.2 for options).

Rogers Labs, Inc. Mikrotikls SIA

Revision 2 File: Mikrotikls RB912G2HPnD TstRpt 120713 r2 Page 10 of 44

Date: August 21, 2012 Test to: CFR47 (15.247)

#### Radiated Emission Test Procedure

The EUT was placed on a rotating 1 x 1.5-meter wooden platform, 0.8 meters above the ground plane at a distance of 3 meters from the FSM antenna. Testing for the radiated emissions was performed as required by CFR47 15 and specified in sections 8 and 13.1.4 of ANSI C63.4-2009. EMI energy was maximized by equipment placement, raising and lowering the FSM antenna, changing the antenna polarization, and by rotating the turntable. Each emission was maximized before data was taken using a spectrum analyzer. Refer to photographs in the test setup exhibits for EUT placement during testing.

#### Test arrangement for radiated emissions of tabletop equipment

1. Interconnecting cables that hang closer than 40 cm to the ground plane shall be folded back and forth in the center, forming a bundle 30 cm to 40 cm long.

Rogers Labs, Inc. 4405 W. 259th Terrace Louisburg, KS 66053 Phone/Fax: (913) 837-3214

Revision 2

- 2. I/O cables that are not connected to a peripheral shall be bundled in the center. The end of the cable may be terminated if required using the correct terminating impedance. The total length shall not exceed 1 m.
- 3. If LISNs are kept in the test setup for radiated emissions, it is preferred that they be installed under the ground plane with the receptacle flush with the ground plane.
- 4. Cables of hand-operated devices, such as keyboards, mice, and so on, shall be placed as for normal use.
- 5. Non-EUT components of EUT system being tested.
- 6. Rear of EUT, including peripherals, shall all be aligned and flush with rear of tabletop (possibly center of table for transmitter equipment).
- 7. No vertical conducting plane used.
- 8. Power cords drape to the floor and are routed over to receptacle.

#### **Intentional Radiators**

As per CFR47, Subpart C, paragraph 15.247 the following information is submitted.

#### Antenna Requirements

The EUT offers female N-type connectors for use with authorized antenna systems only. The design is marketed for professional installation and use as described in accompanying documentation. The antenna connection point complies with the unique antenna connection requirements. The design complies with requirements of CFR47 15.203. There are no deviations or exceptions to the specification.

#### Restricted Bands of Operation

Spurious emissions falling in the restricted frequency bands of operation were measured at a distance of three meters on the OATS. Measurements were made for each antenna option. Emissions, other than transmitter harmonics, measured similar for all configurations and are presented below. Harmonic emissions, in restricted bands, were measured for each antenna style offered and recorded. The EUT utilizes frequency, determining circuitry, which generates harmonics falling in the restricted bands. Emissions were measured at the OATS, using appropriate antennas or pyramidal horns, amplification stages, and a spectrum analyzer. No other significant emission was observed which fell into the restricted bands of operation.

NVLAP Lab Code 200087-0

#### Summary of Results for Radiated Emissions in Restricted Bands

The EUT demonstrated compliance with the radiated emissions requirements of CFR 47 Part 15C Intentional Radiators. The EUT demonstrated a minimum margin of -0.1 dB below the radiated emissions requirements in restricted frequency bands. Peak, Quasi-peak, and average amplitudes were checked for compliance with the regulations. Worst-case emissions are reported with other emissions found in the restricted frequency bands at least 20 dB below the requirements.

#### **AC Line Conducted Emissions Procedure**

The EUT was arranged in a typical equipment configuration and placed on a 1 x 1.5-meter wooden bench 80 cm above the conducting ground plane, floor of a screen room. The bench was positioned 40 cm away from the wall of the screen room. The LISN was positioned on the floor of the screen room 80-cm from the rear of the EUT. The manufacturer supplied AC power adapter for the EUT was connected to the LISN. A second LISN was positioned on the floor of the screen room 80-cm from the rear of the supporting equipment of the EUT. All power cords except the EUT were then powered from the second LISN. EMI was coupled to the spectrum analyzer through a 0.1 µF capacitor, internal to the LISN. Power line conducted emissions testing were carried out individually for each current carrying conductor of the EUT. The excess length of lead between the system and the LISN receptacle was folded back and forth to form a bundle not exceeding 40 cm in length. The screen room, conducting ground plane, analyzer, and LISN were bonded together to the protective earth ground. Preliminary testing was performed to identify the frequency of each radio frequency emission displaying the highest amplitude. The cables were repositioned to obtain maximum amplitude of measured EMI level. Once the worstcase configuration was identified, plots were made of the EMI from 0.15 MHz to 30 MHz then the data was recorded with maximum conducted emissions levels. Refer to figures one and two for plots of the EUT powered by AC/DC adapter, AC Power Line conducted emissions.

Other emissions present had amplitudes at least 20 dB below the limit.

#### Summary of Results for AC Line Conducted Emissions

The EUT demonstrated compliance to the conducted emissions requirements of CFR47 Part 15C equipment. The EUT demonstrated minimum margin of -9.7 dB below the limit. Measurements were taken using the peak, quasi peak, and average, measurement function for each emissions amplitude and were below the limits stated in the specification. Other emissions were present with recorded data representing worst-case amplitudes.

#### General Radiated Emissions Procedure

The EUT was arranged in a typical equipment configuration and operated through all available modes with worst-case data recorded. Preliminary investigation was performed in a screen room with the EUT positioned 1 meter from the FSM. Radiated emissions investigations were performed to identify frequencies, which produced highest emissions. Investigations were made of the radiated frequency spectrum from 9 kHz to 25,000 MHz during preliminary testing. Each radiated emission was then maximized at the OATS location before final radiated emissions measurements were performed. Final data was taken with the EUT located at the OATS at a distance of 3 meters between the EUT and the receiving antenna. The frequency spectrum from 9 kHz to 25,000 MHz was searched for general radiated emissions. Measured emission levels were maximized by EUT placement on the table, rotating the turntable through 360 degrees, varying the antenna height between 1 and 4 meters above the ground plane and changing antenna position between horizontal and vertical polarization. Antennas used were Loop from 9 kHz to 30 MHz, Broadband Biconical from 30 to 200 MHz, Biconilog from 30 to 1000 MHz, Log Periodic from 200 MHz to 1 GHz and or double Ridge or pyramidal horns and mixers from 1 GHz to 40 GHz, notch filters and appropriate amplifiers and external mixers were utilized.

#### Operation in the Band 2400 – 2483.5 MHz

The EUT incorporates two transmit chains offering 2x2 MIMO operation The power output and emissions were measured at the antenna port in compliance with regulation and KDB guidance. Antenna port conducted emissions testing was performed on each chain as reported below. Summing the measured antenna port conducted data presents total EUT output emissions. EUT emissions were also measured on the open area test site at a three-meter distance. The EUT and test configurations were placed on a wooden turntable 0.8 meters above the ground plane at a distance of 3 meters from the FSM antenna. The peak and quasi-peak amplitude of the frequencies below 1000 MHz were measured using a spectrum analyzer. The peak and average amplitude of emissions above 1000 MHz including were measured using a spectrum analyzer. Data was recorded from the analyzer measurement result. Plots of antenna port conducted emissions were taken representing transmitter performance. Refer to figures three through fourteen showing plots taken of the EUT transmitter performance across operational band and band edges.

Mikrotikls SIA Model: RB912G-2HPnD

Test #: 120713

FCC ID#: TV7RB912G-2HPND Test to: CFR47 (15.247) Date: August 21, 2012

File: Mikrotikls RB912G2HPnD TstRpt 120713 r2 Page 37 of 44

SN: 3D640002341D

NVLAP Lab Code 200087-0

**Summary of Results for Transmitter Radiated Emissions of Intentional Radiator** 

The EUT demonstrated compliance with the radiated emissions requirements of CFR47 Part 15.247. Single chain antenna port conducted power 0.500 Watts; total transmitter power both chains 1 Watt. The peak power spectral density presented a minimum margin of -3.75 dB below the requirements. The EUT demonstrated a minimum margin of -9.9 dB below the harmonic emissions requirements. There were no other significantly measurable emissions in the restricted

bands other than those recorded in this report. Other emissions were present with amplitudes at

least 20 dB below the requirements. There were no other deviations or exceptions to the

requirements.

Note: Some measurements taken during this investigation presented results having margins

below the laboratory calculated measurement uncertainty values.

Statement of Modifications and Deviations

No modifications to the EUT were required for the unit to demonstrate compliance with the CFR47 Part 15C emissions standards. There were no deviations to the specifications.

#### Annex A Measurement Uncertainty Calculations

Measurement uncertainty calculations were made for the laboratory. Result of measurement uncertainty calculations are recorded below for AC line conducted and radiated emission measurements.

Measurement Uncertainty	U <sub>(E)</sub>	U <sub>(lab)</sub>
3 Meter Horizontal 30-200 MHz Measurements	2.08	4.16
3 Meter Vertical 30-200 MHz Measurements	2.16	4.33
3 Meter Vertical Measurements 200-1000 MHz	2.99	5.97
10 Meter Horizontal Measurements 30-200 MHz	2.07	4.15
10 Meter Vertical Measurements 30-200 MHz	2.06	4.13
10 Meter Horizontal Measurements 200-1000 MHz	2.32	4.64
10 Meter Vertical Measurements 200-1000 MHz	2.33	4.66
3 Meter Measurements 1-6 GHz	2.57	5.14
3 Meter Measurements 6-18 GHz	2.58	5.16
AC Line Conducted	1.72	3.43

#### Annex C Rogers Qualifications

Scot D. Rogers, Engineer

#### Rogers Labs, Inc.

Mr. Rogers has approximately 17 years' experience in the field of electronics. Engineering experience includes six years in the automated controls industry and remaining years working with the design, development and testing of radio communications and electronic equipment.

#### Positions Held

Systems Engineer: A/C Controls Mfg. Co., Inc. 6 Years

Electrical Engineer: Rogers Consulting Labs, Inc. 5 Years

Electrical Engineer: Rogers Labs, Inc. Current

#### **Educational Background**

- 1) Bachelor of Science Degree in Electrical Engineering from Kansas State University.
- 2) Bachelor of Science Degree in Business Administration Kansas State University.
- 3) Several Specialized Training courses and seminars pertaining to Microprocessors and Software programming.

Attention:

Scot Rogers,

Re:

Measurement facility located at Louisburg

3 & 10 meter site

Date of Renewal: November 01, 2011

#### Dear Sir or Madam:

Your request for renewal of the registration of the subject measurement facility has been received. The information submitted has been placed in your file and the registration has been renewed. The name of your organization will remain on the list of facilities whose measurement data will be accepted in conjunction with applications for Certification under Parts 15 or 18 of the Commission's Rules. Please note that the file must be updated for any changes made to the facility and the registration must be renewed at least every three years.

Measurement facilities that have indicated that they are available to the public to perform measurement services on a fee basis may be found on the FCC website www.fcc.gov under E-Filing, OET Equipment Authorization Electronic Filing, Test Firms.

December 28, 2011

OUR FILE: 46405-3041 Submission No: 152685

Rogers Labs Inc. 4405 West 259th Terrance Louisburg, KS, 66053 USA

Attention: Mr. Scot D. Rogers

Dear Sir/Madame:

The Bureau has received your application for the renewal of 3/10m OATS. Be advised that the information received was satisfactory to Industry Canada. The following number(s) is now associated to the site(s) for which registration / renewal was sought ( Site# 3041A-1 ). Please reference the appropriate site number in the body of test reports containing measurements performed on the site. In addition, please keep for your records the following information;

- The company address code associated to the site(s) located at the above address is: 3041A

Furthermore, to obtain or renew a unique site number, the applicant shall demonstrate that the site has been accredited to ANSI C63.4-2003 or later. A scope of accreditation indicating the accreditation by a recognized accreditation body to ANSI C63.4-2003 or later shall be accepted. Please indicate in a letter the previous assigned site number if applicable and the type of site (example: 3 metre OATS or 3 metre chamber). If the test facility is not accredited to ANSI C63.4-2003 or later, the test facility shall submit test data demonstrating full compliance with the ANSI standard. The Bureau will evaluate the filing to determine if recognition shall be granted.

The frequency for re-validation of the test site and the information that is required to be filed or retained by the testing party shall comply with the requirements established by the accrediting organization. However, in all cases, test site re-validation shall occur on an interval not to **exceed three years**. There is no fee or form associated with an OATS filing. OATS submissions are encouraged to be submitted electronically to the Bureau using the following URL;

http://strategis.ic.gc.ca/epic/internet/inceb-bhst.nsf/en/h\_tt00052e.html.

If you have any questions, you may contact the Bureau by e-mail at <a href="mailto:certification.bureau@ic.gc.ca">certification.bureau@ic.gc.ca</a> Please reference our file and submission number above for all correspondence.

Yours sincerely,

Dalwinder Gill
