

## **RF Exposure Statement**

RF exposure evaluations are based on extremity SAR evaluation.

According to KDB 447498, item 4), C), iii). The SAR limit is  $1000/\sqrt{2.4G} = 645$  mW.

The measured peak output power is  $29.6 \text{ mW} < 645 \text{ mW}$

Therefore, no SAR evaluation is needed.
