July 10, 2008

To Whom It May Concern:

Summit Data Communications, Inc. is the manufacturer of the SDC-CF10AG, an 802.11a/g compliant wireless LAN radio module which carries the FCC grant TWG-SDCCF10AG. Subsequent to receipt of this grant, Summit has modified the operating software associated with this device to operate on channels in the 5 GHz portion of the frequency spectrum commonly referred to as Dynamic Frequency Selection (DFS) bands.

On behalf of Summit I do hereby attest that no hardware modifications have been made to this device in order to operate on these channels. The device's new ability to operate on these channels (in a fully FCC compliant manner) is strictly a result of software modifications.

Please feel free to contact me with any questions or comments.

Sincerely,

A handwritten signature in black ink, appearing to read "Ronald Seide".
