

Speedway Professional Installation:

Impinj markets and sells the Speedway IPJ-R1000 readers only to value added resellers (VAR's) either directly or via specialized distributors that provide system design, installation and field support services. Impinj signs marketing and sale agreements with each VAR and provides training classes on RFID system operation and installation of the RFID reader. The reader is not sold to the general public.

The VAR or a trained third party installer will install the RFID equipment at the end customer site. The Speedway IPJ-R1000 User Guide provides all necessary instructions for configuration and installing within the FCC regulations for which the product is certified.

Typical applications for the Speedway readers are inventorying items with RFID tags at distribution warehouses, shipping area of manufacturers, food processing plants, or pharmaceutical packaging centers. The reader and antennas are typically installed on dock doors, conveyor systems or manufacturing equipment.
