Application for Class II Permissive Change for Speedway Revolution TWYIPJREV

To Whom this my concern,

We, the undersigned, seek FCC approval of a Class II Permissive Change for the Speedway Revolution RFID Reader, Impinj model number IPJ-REV. The reason for the Class II change is an addition to the Approved Antenna Vendors list.

There are no hardware or mechanical changes to the reader. The product is unchanged from the previous version, with the exception of firmware upgrade to optimize efficiency and functionality. The maximum conducted power to the antenna is unchanged as well as the maximum EIRP. The IPJ-REV currently requires professional installation. The reader is sold only to Impinj resellers or trained users.

FCC certification number: TWYIPJREV

IC certification number: 6324A-IPJREV

Sincerely,

A handwritten signature in blue ink, appearing to read "Bill Ashley", written over a horizontal line.

Bill Ashley

VP of Hardware Engineering
