

Test Article Identification

Per ISO 17025 (2017), the test article must be identified at time of test by the manufacturer/customer. The representative signing below agrees the information below is correct to identify the test article being tested by CKC Laboratories, Inc. For any reports generated by CKC on the client's behalf, the information below will be used to identify the test article in the report. Any changes, additions, or corrections to the following information after time of test are required to be listed as an amendment in the report. The manufacturer/customer may incur report addendum fees for any changes to this information given after time of test.

The test article identification must be unique and unambiguous (no wildcards with "XX" allowed). Also note for Korean market testing, equivalency statements for models are not allowed. Device Name in this document refers to the marketing name of the product to appear on the cover page of the test report.
