Newtrax Technologies Inc. - WN-100 modular approval request

To whom it may concern,

Newtrax Technologies Inc. is seeking a modular approval for its WN-100 transmitter module. The module's FCC ID is TXKWN-100 and its IC ID is 6314A-WN100.

1. The modular transmitter has its own RF shielding.
2. The modular transmitter modulation/data inputs are not directly available to the customer. The transmitter's input are only accessible through the onboard microcontroller that acts as buffer.
3. The modular transmitter has its own power supply regulation and local reference oscillator.
4. The modular transmitter complies with the antenna requirements of Section 15.203 and 15.204(c). A list of antennas has been approved for use with the module.
5. The modular transmitter has been tested in a stand-alone configuration. The transmitter module is battery powered. There are no AC or DC power lines and data input/output lines connected to the module. No accessories, peripherals, or support equipment connected to the module was used during testing.
6. The modular transmitter is labelled with its own FCC ID and IC ID numbers.
7. The modular transmitter complies with the specific rules or operating requirements applicable to the transmitter. Newtrax provides adequate instructions in its User Guide and Development Manuals to explain any such requirements. The strict operational and timing requirements that must be met before a transmitter is authorized for operation are not available to customers, so compliance with these requirements is assured.
8. The modular transmitter complies with applicable RF exposure requirements. See the RF-exposure statement document for details.
