

No SAR Evaluation Required if power is below the following threshold:

Frequency Range: 2402-2480MHz

Low threshold =  $60/f(\text{GHz}) \text{ mW} = 60 / 2.480 = 24.19\text{mW}$

Conducted Output Power Measured (dBm) = 5.1 dBm

Antenna Gain (dBi) = 1.7 dBi (calculated from measured conducted and radiated power)

EIRP – calculated (mW) = N/A

EIRP – measured (mW) = 4.8 mW

As both Conducted output power 3.2 mW and EIRP 4.8 mW are below the low threshold, device complies with FCC's RF radiation exposure limits for uncontrolled/general exposure category for a portable device.
