Equipment Class:	TNE - Licensed Non-Broadcast Transmitter Held to Ear
Product Type:	Satellite Mobile Hand Held Terminal
FCC ID:	TZ5XTDUAL
Model Number:	XT DUAL
Test standards:	FCC 47 CFR Part 25 : Satellite Communications_ Oct.1. 2007 FCC 47 CFR Part 15 : Radio Frequency devices Subpart C_Oct. 1, 2007 FCC 47 CFR Part 2 : General Rules and Regulations
Sample Serial Number:	Prototype
Sample Receive Date:	2008-08-20
Testing Date:	2008-08-20 ~ 09-25
Test Report Date:	2009-03-13
Test Report Reissue Date:	2011-11-15
Overall Results:	Pass

UL Korea as an affiliate of Underwriters Laboratories Inc. EMC report apply only to the specific test samples and test results submitted for UL's review. All samples tested were in good operating condition throughout the entire test program. It is the manufacturer's responsibility to assure that additional production units of this model are manufactured with identical electrical and mechanical components. UL Korea Ltd. shall have no liability for any deductions, inferences or generalizations drawn by the client or others from UL Korea Ltd. issued reports. This report shall not be used to claim, constitute or imply product certification, approval, or any agency of the National Authorities. This report may contain test results that are not covered by the NVLAP or KOLAS accreditation.

## **Summary of Testing**

The following tests were performed on a sample submitted for evaluation of compliance with 47 CFR Part 25\_2008 Satellite Communications\_Portable Earth Station Transceiver in the 1,5/1,6 GHz bands

No. 1	47 CFR Part 2, Part 15 and Part 25 Technical Requirements Conducted Emissions - §15.107(a)	Result Verdict Complied	Remark
2	Radiated Emissions - §15.109(a)	Complied	
3	Frequency tolerance of Earth stations - §25.202(d), §2.1055	Complied	
4	Emission limitations Conducted measurement - §25.202(f), §2.1051	Complied	
5	Emission limitations Radiated measurement - §25.202(f), §2.1053	Complied	
6	Power limits - §25.204(a), §2.1046	Complied	
7	Limits on emissions for aeronautical radio navigation-satellite service - §25.216 (c) (h), (i)	Complied	

Conclusion:

The tests listed in the Summary of Testing section of this report have been performed and the results recorded by UL Korea Ltd. in accordance with the procedures stated in each test requirement and specification. The test list was determined by the Applicant as being applicable to the Equipment Under Test. As a result, the subject product has been verified to comply or not comply as noted in the Summary of Testing with each test specification. The test results relate only to the items tested.

## **2** General Product Information

### 2.1 Equipment Description

XT is the **Satellite Mobile Hand Held Terminal** for Thuraya satellite mobile communication service based on GMR-1 and GMPRS-1. It supports various services such as voice, circuit data, packet data and fax etc.

## 2.2 Details of Test Equipment (EUT)

- Equipment Type : Satellite Mobile Hand Held Terminal
- Model No. : XT DUAL
- Trade name : Thuraya
- Type of test Equipment : Portable Equipment
- Operating characteristic : MES(Mobile Earth Station) used in the S-PCN
  - Manufacturer : Asia Pacific Satellite Industries Co., Ltd.
    - 9FL, Lotte IT Castle 2-Dong, #550-1,

Gasan-dong, Geumcheon-gu, Seoul, Korea, 153-768

#### **Equipment Configuration**

The EUT is consisted of the following component provided by the manufacturer.

No.	Product Type	Manufacturer	Model	Comments
1	Satellite Mobile Terminal	Asia Pacific Satellite Industries Co., Ltd.	XT DUAL	EUT
2	Travel Charger	Phihong Technology Co Ltd.	PSC11R-050	
3	Ear Set	Cresyin	EMB-ATS 106TKA

## **3** Test Specification

The following test specifications and standards have been applied and used for testing.

#### 1) FCC 47 CFR Part 15: Radio frequency devices

- §15.107(a) Conducted limits
- §15.109(a) Raadiated emission limits

#### 2) FCC 47 CFR Part 25: Satellite communications

- §25.202(d) Frequency tolerance of Earth stations
- §25.202(f) Emission limitations
- §25.204(a) Power limits
- \$25.216(h) Limits on emissions for aeronautical radio navigation-satellite service

4.4	Operating	Frequencies
-----	-----------	-------------

Mode #	Frequency tested			
1	Carrier on state for 3 frequencies in the Transmitter band Low : 1626.59375 MHz / CH = 3 Mid : 1643.5 MHz / CH = 544 Top : 1660.46875 MHz / CH= 1087			
2	Carrier off state for Idle-mode			
Note :				
The carrier st	ignal was modulated with /4 CQPSK as following format.			
Bits/ S	Bits/ Symbol : 2			
•	Symbol Rate : 23.4 kbps			
	Filter : RNYQ(a=0.350)EVM I/Q Scaling : 100 %			
-	Data : PN23			
	FPOL : Normal			
Diff Er	ncode : off			

## 4.5 Operation Modes

Mode #	Description		
1	Carrier on mode: RF signal from the MES was generated continuously for the representative channels (Low, Mid, High) by the test program connected to the notebook PC		
2	Carrier off (Idle) mode: RF carrier was not activated by the MES		
Note : N/	Note : N/A		

## 4.6 Environment Conditions

Parameters	Normal condition	Extreme condition		
Temperature	+ 15 °C ~ +35 °C	-20 °C / +60 °C		
Humidity	20% ~ 75%	No excessive condensation occur		
Supply voltage	3.7Vdc (Rated nominal voltage)	3.5 Vdc / 4.2 Vdc		
Note ; The extreme condition is applied to the boundary limits of the declared operational environmental condition by the manufacturer.				

-. The operating condition for humidity requirement has not been declared in the manufacturer's specification.

## 5 Overview of Technical requirements

The following test items show that the correspondence of test items and the performance of output power and its spectrum transmission are in accordance to the technical description.

The test results shows

No deviations to the technical requirements were ascertained during the tests performed.

Deviations as specified in this report were ascertained during the tests performed.

#### 5.1 Conducted Emissions

Reference : FCC 47 CFR Part 15 Radio Frequency devices\_Sep. 20, 2007 Clause : Section 15.107 Conducted limits

#### **Technical requirements**

An intentional radiator that is designed to be connected to the public utility (AC) power line, the radio frequency voltage that is conducted back onto the AC power line on any frequency or frequencies within the band 150 kHz to 30 MHz shall not exceed the limits in the section §15.107 (a).

#### **Result of test**

$\ge$	Pass
	Fail
	Already tested(refer to test report no)
	Not applicable

Remarks: None

#### **5.2 Radiated Emissions**

Reference : FCC 47 CFR Part 15 Radio Frequency devices\_Sep. 20, 2007 Clause : Section 15.109 Radiated emission limits

#### **Technical requirements**

The emissions from an intentional radiator shall not exceed the field strength levels specified in the table of §15.109 (a).

Res	ult of test
$\square$	Pass
	Fail
	Already tested(refer to test report no)
	Not applicable

Remarks : None

UL Korea, Ltd. 33<sup>rd</sup> FL, Gangnam Finance Center, 737 Yeoksam-dong, Gangnam-gu, Seoul 135-984 Korea Tel: +82.2.2009.9000, Fax:+82.2.2009.9405

Project Number:	11CA49640	File Number :	TC8316	Page :	13 of 38
Document:	FCC Test Report for Satel	lite Hand Held Tern	ninal Model No. XT DUA	١L	

#### 5.3 Frequency Tolerance of Earth stations

Reference : FCC 47 CFR Part 25 Satellite Communications\_Oct. 01, 2007 Clause : Section 25.202(d) Frequency tolerance of Earth stations

se : Section 25.202(d) Frequency tolerance of Earth stations Section 2.1055 Frequency Stability

#### **Technical requirements**

The carrier frequency of each earth station transmitter authorized in these services shall be maintained within 0.001 percent of the reference frequency.

#### **Result of test**

Pass
Fail
Already tested(refer to test report no.\_\_\_\_)
Not applicable
Remarks : None

### 5.4 Emission Limitations

Reference : FCC 47 CFR Part 25 Satellite Communications\_Oct. 01, 2007

Clause : Section 25.202(f) Emission limitations

Section 2.1051 Spurious emission at antenna terminal

#### **Technical requirements**

The mean power of emissions shall be attenuated below the mean output power of the transmitter in accordance with the requirements specified in the section 25.202(f)(1), (2) and (3).

#### **Result of test**

Pass
Fail
Already tested(refer to test report no.\_\_\_\_)
Not applicable
Remarks : None

### 5.5 Emission Limitations

Reference : FCC 47 CFR Part 25 Satellite Communications\_Oct. 01, 2007

Clause : Section 25.202(f) Emission limitations

Section 2.1053 Field strength of spurious radiation

#### **Technical requirements**

The mean power of emissions shall be attenuated below the mean output power of the transmitter in accordance with the requirements specified in the section \$25.202(f)(1), (2) and (3).

Rest	ılt of test
$\boxtimes$	Pass
	Fail

#### 5.6 Power limits

Reference : FCC 47 CFR Part 25 Satellite Communications\_Oct. 01, 2007 Clause : Section 25.204 Power Limits

#### **Technical requirements**

The equivalent isotropically radiated power transmitted in any direction towards the horizon by an earth station operating in frequency bands between 1 and 15 GHz, shall not exceed the requirement specified in the section §25.204(a)

#### **Result of test**

Pass
Fail
Already tested(refer to test report no.\_\_\_\_)
Not applicable
Remarks : None

#### 5.7 Limits on emissions for aeronautical radio navigation-satellite service

Reference : FCC 47 CFR Part 25 Satellite Communications\_Oct. 01, 2007 Clause : Section 25.216 Limits on emissions from mobile earth stations for protection of aeronautical Radio navigation-satellite service

#### **Technical requirements**

The e.i.r.p density of carrier-off state emissions from mobile earth stations with assigned uplink frequencies in the 1626.5-1660.5 MHz band shall suppress the power density of emissions in the 1605-1610 MHz band shall not exceed the requirement specified in the section \$25.216 (c), (h),(i)

#### **Result of test**

Pass
Fail
Already tested(refer to test report no.\_\_\_\_)
Not applicable

Remarks : None

#### Limits

Frequency Range (MHz)	Attenuation to Carrier	Measurement	Measurement method
Frequency Range (WHZ)	power (dBc)	Bandwidth	Weasurement method
50 – 100% of assigned BW	-25	4 kHz	Peak Hold
100 – 250% of assigned BW	-35	4 kHz	Peak Hold
> 250 % of assigned BW	-(43+10log(Pmax))	4 kHz	Peak Hold

NOTE : §25.202(f)(1), (2) and (3)

The mean power of emissions shall be attenuated below the mean output power of the transmitter in accordance with the following

(1) In any 4 kHz band, the center frequency of which is removed from the assigned frequency by more than 50 % up to and including 100 % of the authorized bandwidth: 25 dB

(2) In any 4 kHz band, the center frequency of which is removed from the assigned frequency by more than 100 % up to and including 250 % of the authorized bandwidth: 35 dB

(3) In any 4 kHz band, the center frequency of which is removed from the assigned frequency by more than 250 % of the authorized bandwidth:An amount equal to 43 dB plus 10 times the logarithm (to the base 10) of the transmitter power in watts;

## 6.5 Emission limitations : Field strength spurious radiation

	TEST: Field strength	TEST: Field strength of spurious radiation : Radiated Measurements			
Method	To measure the EIRP, the EUT was placed on a tale in a 10 meter test chamber. The emissions from the EUT were measured continuously at every azimuth by rotating the turntable. The receiving antenna was placed in 3 meter distance on the antenna mast. Both horizontal and vertical polarization of the antenna were measured by rotating the EUT. Measurement were performed on three orthogonal axis. The receiving level was recorded. The EUT was replaced with a substitution transmit antenna and signal generator. The TX power from the signal generator was tuned to get the same reading level of the predetermined receiving level. The signal generator output level, cable loss and substitution antenna gain were considered to calculate the EIRP

## 6.7 Limits on emissions for aeronautical radio navigation-satellite service

	TEST: Conducted en	TEST: Conducted emissions at Antenna port			
Method	Measurements were made in the laboratory environment. Conducted spurious emission measurement was made using a direct connection between RF output of the EUT and spectrum analyzer through RF attenuator. Measurement has been performed with the EUT set to maximum output level at lowest and highest channel frequencies. The spectrum was investigated from 1,559 MHz to 1,610 MHz.				
Reference Cla	ference Clause §25.216 (c), (h) & (i)				
Parameters required prior to the test		Laboratory Ambient Temperature	10 to 40 °C		
		Relative Humidity	10 to 90 %		
Parameters recorded during the test		Laboratory Ambient Temperature	23 °C		
		Relative Humidity	45 %		
		Frequency range	Measurement Point		
Fully configured sample scanned over the following frequency range		1,559 MHz – 1,610 MHz	Antenna port		

#### **Configuration Settings**

Power Interface Mode # (See Section 3.3)	Test Configurations Mode # (See Section 3.7)	EUT Operation Mode # (See 3.5)			
1	1	1, 2			
Supplementary information: None					

#### Limits

Frequency (MHz)	Maximum EIRP (dBW)	Resolution Bandwidth	Condition
1559 - 1605	-70	1 MHz	Carrier-on
1559 - 1605	-80	700 Hz	discrete
1605 - 1610	-70 to -46	1 MHz	Carrier-on
1605 - 1610	-80 to -56	700 Hz	discrete
1559 - 1610	-80	1	Carrier-off

Supplementary information: §25.216 (c), (h) & (i)

(c) The e.i.r.p. density of emissions from mobile earth stations with assigned uplink frequencies between 1610 MHz -1660.5 MHz shall not exceed -70 dBW/MHz, averaged over any 2 millisecond active transmission interval, in the band 1559–1605 MHz.

The e.i.r.p. of discrete emissions of less than 700 Hz bandwidth from such stations shall not exceed -80 dBW, averaged over any 2 millisecond active transmission interval, in the 1559–1605 MHz band.

(h) Mobile earth stations with assigned uplink frequencies in the 1626.5–1660.5 MHz band shall suppress the power density of emissions in the 1605–1610 MHz band-segment to an extent determined by linear interpolation from -70 dBW/MHz at 1605 MHz to -46 dBW/MHz at 1610 MHz, averaged over any 2 millisecond active transmission interval.

The e.i.r.p of discrete emissions of less than 700 Hz bandwidth from such stations shall not exceed a level

UL Korea, Ltd. 33<sup>rd</sup> FL, Gangnam Finance Center, 737 Yeoksam-dong, Gangnam-gu, Seoul 135-984 Korea Tel: +82.2.2009.9000, Fax:+82.2.2009.9405

determined by linear interpolation from -80 dBW at 1605 MHz to -56 dBW at 1610 MHz, averaged over any 2 millisecond active transmission interval.

(i) The e.i.r.p density of carrier-off state emissions from mobile earth stations with assigned uplink frequencies between 1 and 3 GHz shall not exceed -80 dBW/MHz in the 1559–1610 MHz band averaged over any two millisecond interval.

#### Test Equipment Used

Description	Manufacturer	Model	Identifier	Cal. Due
Spectrum Analyzer	Agilent Technologies	E4440A	MY46186519	2009.03.29
RF Power Meter	Agilent Technologies	E4418B	MY45105913	2009.03.29
Power Sensor	Agilent Technologies	8481H	MY41092319	2009.03.29
Coaxial Attenuator	Agilent Technologies	8491B	90466	2009.03.29
High Pass Filter	Wainwright	WHK3.3/18G-10EF	10Z	2009.08.20
Programmable DC Power Supply	GW Instek	PSH-2050A	EH160824	2009.03.30
Temp & Humid Test Chamber	Climats	ЕХ2213-НА	7558	2009.06.23

Measurement Plots : Refer to the provided measurement plot no. 46 - 52

#### **Remarks** :

Regarding the measurement with less than 700 Hz bandwidth, there was no detection of any discrete emissions from the mobile phone with this bandwidth. The test plots for 1MHz bandwidth as a worst case were reported.

#### **Result of test**

Complied with the technical requirement of FCC 47 CFR Part 25 §25.216 (c), (h) & (i), (2)

🛛 Complied

Failed
