1.0	November 18, 2008	Modified from existing UM.

### **1** Introduction

Congratulations on your purchase of ESR-9753 Wireless Network Broadband Router. ESR-9753 is compatible with 802.11g & 802.11b gadgets. ESR-9753 is not only a Wireless Access Point, but also doubles as a 4-port full-duplex Switch that connects your wired-Ethernet devices together at incredible speeds.

At 150Mbps wireless transmission rate, Access Point built into the Router uses advanced 802.11n technology to transmit multiple steams of data in a single wireless channel giving you seamless access to multimedia content. Robust RF signal travels farther, eliminates dead spots and extends network range. For data protection and privacy, ESR-9753 encodes all wireless transmissions with WEP, WPA, and WPA2 encryption.

With inbuilt DHCP Server & powerful SPI firewall ESR-9753 protects your computers against intruders and most known Internet attacks but provides safe VPN pass-through. With incredible speed and QoS function, ESR-9753 is ideal for media-centric applications like streaming video, gaming, and VoIP telephony to run multiple media-intense data streams through the network at the same time, with no degradation in performance.

# 2 Key Features

Features	Advantages
Incredible Data Rate up to 150Mbps**	Heavy data payloads such as
	MPEG video streaming
IEEE 802.11b/g Compliant	Fully Interoperable with IEEE
	802.11b / IEEE 802.11g compliant
	devices with legacy protection
Four 10/100 Mbps Fast Switch Ports	Scalability, extend your network.
(Auto-Crossover)	
Firewall supports, DMZ, MAC Filter, IP	Avoids the attacks of Hackers or
Filter, URL Filter, ICMP Blocking, SPI,	Viruses from Internet
Port Mapping, Port Forwarding, Port	
Trigger	
Support 802.1x Authenticator, 802.11i	Provide mutual authentication
(WPA/WPA2, AES), VPN pass-through	(Client and dynamic encryption
	keys to enhance security
WDS (Wireless Distribution System)	Make wireless AP and Bridge mode
	simultaneously as a wireless
	repeater

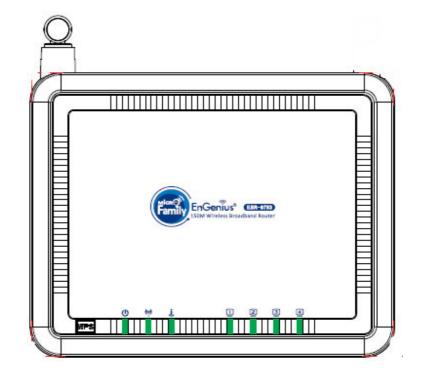

\*\* Theoretical wireless signal rate based on IEEE standard of 802.11a, b, g, n chipset used. Actual throughput may vary. Network conditions and environmental factors lower actual throughput rate. All specifications are subject to change without notice.

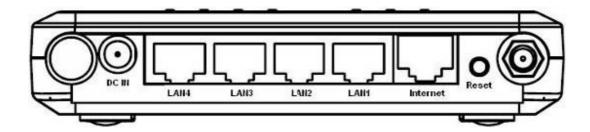

### **3 Package Contents**

Open the package carefully, and make sure that none of the items listed below are missing. Do not discard the packing materials, in case of return; the unit must be shipped back in its original package.

- 1. SOHO Router
- 2. 100V~240V Power Adapter
- 3. 2dBi 2.4GHz SMA Upgradable Antennas x 1 pcs
- 4. Quick Install Guide
- 5. CD (User's Manual)

# **4** Product Layout

LED	Description
POWER	Lights up when powered ON. Blinks on TEST/RESET
WLAN	Lights up in ORANGE when WLAN is enabled. Blinks on traffic
LAN PORT ACTIVY	Blinks on traffic for specific LAN PORT
100 Mbps	Lights up when 100 Mbps data rate enabled on that specific port

ITEM	Description
Reset	Click this button to restart the system, or
	Press this button and hold for 10 seconds
	to restart the system.
WPS	Click this button to start WPS function.
DC IN	Power connector, connects to DC 12V
	Power Adapter
LAN1 ~ 4	Local Area Network (LAN) ports 1 to 4
INTERNET	Wide Area Network(WAN) port

# 5 Network + System Requirements

To begin using the ESR-9753, make sure you meet the following as minimum requirements:

- > PC/Notebook.
- Operating System Microsoft Windows 98SE/ME/XP/2000/VISTA
- > 1 Free Ethernet port.
- ➤ WiFi card/USB dongle (802.11b/g) optional.
- External xDSL (ADSL) or Cable modem with an Ethernet port (RJ-45).
- > PC with a Web-Browser (Internet Explorer, Safari, Firefox, Opera etc.)
- Few Ethernet compatible CAT5 cables.

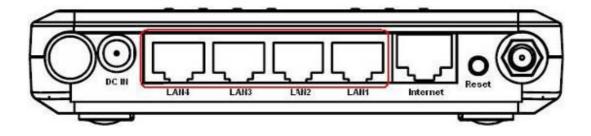

## 6 ESR-9753 Placement

You can place ESR-9753 on a desk or other flat surface, or you can mount it on a wall. For optimal performance, place your Wireless Broadband Router in the center of your office (or your home) in a location that is away from any potential source of interference, such as a metal wall or microwave oven. This location must be close to a power connection and your ADSL/Cable modem. If the antennas are not positioned correctly, performance loss can occur.

# 7 Setup LAN, WAN

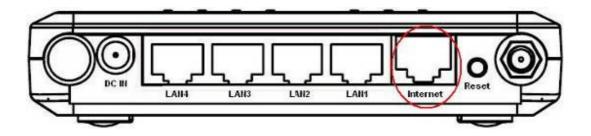

LAN connection:

Connect Ethernet cable between your PC/Notebook LAN port & one of the 4 available LAN ports on ESR-9753.

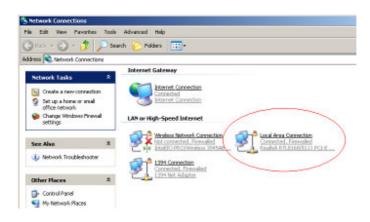

WAN connection:

Connect Ethernet cable between WAN ports of your ADSL/CABLE modem & INTERNET port of ESR-9753. Make sure your ADSL/CABLE modem is working well. Contact your ISP if you have any questions.

# 8 PC Network Adapter setup (Windows XP)

• Enter [Start Menu] → select [Control panel] → select [Network].

• Select [Local Area Connection]) icon=>select [properties]

• Select [Internet Protocol (TCP/IP)] =>Click [Properties].

- Select the [General] tab.
- a. ESR-9753 supports [DHCP] function, please select both [Obtain an IP address automatically] and [Obtain DNS server address automatically].

### 9 Bring up ESR-9753

Connect the supplied power-adapter to the power inlet port and connect it to a wall outlet. Then, ESR-9753 automatically enters the self-test phase. During self-test phase, Power LED will blink briefly, and then will be lit continuously to indicate that this product is in normal operation.

### **10 Smart Wizard**

#### <u>CHECK</u>

- Internet connection should be setup & ready to use (ADSL or cable modem).
- Modem must provide an RJ45 port to connect with ESR-9753.
- Microsoft Windows compatible PC/Notebook with UPnP enabled network adapter.
- CAT 5 network cable(s), RJ45 port on PC/Notebook.

#### **STEP 1**

Connect ESR-9753 WAN port & your modem LAN port with RJ45 cable.

#### STEP 2

Power up ESR-9753.POWER led on front panel lights up & remains stable.

#### STEP 3

Connect ESR-9753 LAN port & PC/Notebook RJ45 port with network cable.

#### STEP 4

Insert the **ESR-9752** CD into your DVD/CD drive and **SMART WIZARD** should run automatically with a few seconds. If not, please open Windows Explorer and find the root directory of CD. Double click on **Wizard.exe** icon to run it.

Double click on Wizard.exe icon to run it.

t

### - LAN

The LAN Tabs reveals LAN settings which can be altered at will. If you are an entry level user, try accessing a website from your browser. If you can access website without a glitch, just do not change any of these settings.

Click **<Apply>** at the bottom of this screen to save the changed configurations.

### LAN IP

- IP address: 192.168.0.1. It is the router's LAN IP address (the "Default Gateway" IP address of your LAN clients). It can be changed based on your own choice.
- IP Subnet Mask: 255.255.255.0 Specify a Subnet Mask for your LAN segment.
- **802.1d Spanning Tree:** This is disabled by default. If 802.1d Spanning Tree function is enabled, this router will use the spanning tree protocol to prevent network loops.

#### **DHCP Server**

DHCP Server: This can enable or disable the Dynamic Pool setting.

Lease time: This is the lease time of each assigned IP address.

Start IP: This is the beginning of the IP pool for DHCP client hosts.

End IP:. This is the end of the IP pool for DHCP client hosts

Domain name: The Domain Name for the existing or customized network.

### - DHCP

View the current LAN clients which are assigned with an IP Address by the DHCP-server. This page shows all DHCP clients (LAN PCs) currently connected to your network. The table shows the assigned IP address, MAC address and expiration time for each DHCP leased client. Use the **<Refresh>** button to update the available information. Hit **<Refresh>** to get the updated table.

You can check "Enable Static DHCP IP". It is possible to add more static DHCP IPs. They are listed in the table "Current Static DHCP Table". IP address can be deleted at will.

Click **<Apply>** button to save the changed configuration.

Mode :		AP 💌				
Band :		2.4 GHz (B+G+N)				
Enabled	ISSID#:					
SSID1		EnGeniusC	CDD10	-		
					An	olv Cancel
					App	oly Cano

- **Radio:** You can turn on/off wireless radio. If wireless Radio is off, you cannot associate with AP through wireless.
- **Mode:** In this device, we support three operation modes which are **AP router** and **AP route with WDS**. If you choose AP Router Mode, you can select AP or WDS function in the drop-down menu.
- Band: You can select the wireless standards running on your network environment.

- 2.4 GHz(B): If all your clients are 802.11b, select this one.
- **2.4 GHz(N):** If all your clients are 802.11n, select this one.
- **2.4 GHz(B+G):** Either 802.11b or 802.11g wireless devices are in your environment.
- 2.4 GHz(G): If all your clients are 802.11g, select this one.
- **2.4 GHz(B+G+N):** Either 802.11b, 802.11g, or 802.11n wireless devices are in your environment.
- **Enable ESSID:** We support 4 multiple SSIDs in this device. Please select how many SSIDs you would like to use in your network environment.
- **ESSID1~4:** ESSID is the name of your wireless network. It might be a unique name to identify this wireless device in the Wireless LAN. It is case sensitive and up to 32 printable characters. You might change the default ESSID for added security.

# - WDS with AP Router

Wireless Distribution System, a system that enables the wireless interconnection of access point, allows a wireless network to be extended using multiple APs without a wired backbone to link them. Each WDS AP needs same channel and encryption type settings.

	Wirel	ess Netw	ork Broa	adband	Router		AP Router Mod
Basic	Advanced	Security	<u>Filter</u>	WPS	Client List	Policy

	MAC addres	s 1 :	00000000	0000			
	MAC addres	s 2 :	00000000	0000			

- MAC address 1~4: Please enter the MAC address(es) of the neighboring APs which participate in WDS. There can be maximum of 4 devices now.
- Set Security: WDS Security depends on your AP security settings. Note: it does not support mixed mode such as WPA-PSK/WPA2-PSK Mixed mode.

### - Advanced

This tab allows you to set the advanced wireless options. You should not change these parameters unless you know what effect the changes will have on the router.

	Wire	less Netw	ork Bro	adband	Router		AP Router Mode
lasic	Advanced	<u>Security</u>	Filter	WPS	Client List	Policy	
about v	wireless LAI		ings should	not be cha	l users who have anged unless yo		
Fragm	ent Thresh	old : 2	346	(256-23	46)		
RTS T	hreshold :	2	347	(0-2347)			
Beaco	n Interval	: 1	00	(20-1024	1 ms)		
DTIM	Period :	1		(1-10)			
Data r	ate :	A	uto 💌				
N Data	a rate:	A	uto 💌				
-							
Pream	ible Type :		C Long Prea	amble 👁 s	hort Preamble		
CTS P	rotection :		Auto O	Always @	None		

**Fragment Threshold:** This specifies the maximum size of a packet during the fragmentation of data to be transmitted. If you set this value too low, it will result in bad performance.

- **RTS Threshold:** When the packet size is smaller than the RTS threshold, the wireless router will not use the RTS/CTS mechanism to send this packet.
- **Beacon Interval:** This is the interval of time that this wireless router broadcasts a beacon. A Beacon is used to synchronize the wireless network.

- **DTIM Period:** Enter a value between 1 and 255 for the Delivery Traffic Indication Message (DTIM). A DTIM is a countdown informing clients of the next window for listening to broadcast and multicast messages.
- **Data Rate:** The "Data Rate" is the rate that this access point uses to transmit data packets. The access point will use the highest possible selected transmission rate to transmit the data packets.
- N Data Rate: The "Data Rate" is the rate that this access point uses to transmit data packets for N compliant wireless nodes. Highest to lowest data rate can be fixed.
- Preamble Type: The "Long Preamble" can provide better wireless LAN compatibility while the "Short Preamble" can provide better wireless LAN performance.
- **CTS Protection:** It is recommended to enable the protection mechanism. This mechanism can decrease the rate of data collision between 802.11b and 802.11g wireless stations. When the protection mode is enabled, the throughput of the AP will be a little lower due to a lot of frame-network that is transmitted.

### - Security

This Access Point provides complete wireless LAN security functions, included are WEP, IEEE 802.1x, IEEE 802.1x with WEP, WPA with pre-shared key and WPA with RADIUS. With these security functions, you can prevent your wireless LAN from illegal access. Please make sure your wireless stations use the same security function, and are setup with the same security key.

asic	Advanced	Security	Filter	<u>WPS</u>	Client List	Policy	
This	page allows y	ou setup the	wireless se	curity. Turr	on WEP or WF	A by using E	Incryption

	SSID Selec	tion :	EnGe	eniusCCDD'	10 💌		
	Broadcast S	SSID :	Enab	le 🔳			
	WMM :		Enab	le 💌			
	Encryption	:	Disat	le	•		12

- **ESSID Selection:** This broadband router support multiple ESSID, you could select and set up the wanted ESSID.
- **Broadcast ESSID:** If you enabled "Broadcast ESSID", every wireless station located within the coverage of this AP can discover this AP easily. If you are building a public wireless network, enabling this feature is recommended. Disabling "Broadcast ESSID" can provide better security.
- **WMM:** Wi-Fi MultiMedia if enabled supports QoS for experiencing better audio, video and voice in applications.
- **Encryption:** When you choose to disable encryption, it is very insecure to operate ESR-9753.

### Enable 802.1x Authentication

IEEE 802.1x is an authentication protocol. Every user must use a valid account to login to this Access Point before accessing the wireless LAN. The authentication is processed by a RADIUS server. This mode only authenticates users by IEEE 802.1x, but it does not encrypt the data during communication.

SSID Selection :	EnGeniusCCDD10 💌
Broadcast SSID :	Enable 💌
WMM :	Enable 💌
Encryption :	Disable
Enable 802.1x Auther	ntication
RADIUS Server IP address :	
RADIUS Server port :	1812
RADIUS Server password	1
	Apply Cancel

### **WEP Encryption**

When you select 64-bit or 128-bit WEP key, you have to enter WEP keys to encrypt data. You can generate the key by yourself and enter it. You can enter four WEP keys and select one of them as a default key. Then AP can receive any packet encrypted by one of the four keys.

SSID Selection :	EnGeniusCCDD10
Broadcast SSID :	Enable 💌
WMM :	Enable 💌
Encryption :	WEP
Authentication type :	Open System     Shared Key C Auto
Key Length :	64-bit 💌
Key type :	ASCII (5 characters) 💌
Default key :	Key 1 💌
Encryption Key 1 :	****
Encryption Key 2 :	****
Encryption Key 3 :	****
Encryption Key 4 :	AAAAA

- Authentication Type: There are two authentication types: "Open System" and "Shared Key". Both AP and wireless client must be configured with the same authentication type.
- **Key Length:** You can select the WEP key length for encryption, 64-bit or 128-bit. The larger the key will be the higher level of security is used, but the throughput will be lower.
- **Key Type:** You may select ASCII Characters (alphanumeric format) or Hexadecimal Digits (in the "A-F", "a-f" and "0-9" range) to be the WEP Key.

Default Key: It's the key used to encrypt data.

- **Key1 Key4:** The WEP keys are used to encrypt data transmitted in the wireless network. Use the following rules to setup a WEP key on the device.
  - **64-bit WEP:** input 10-digits Hex values (in the "A-F", "a-f" and "0-9" range) or 5-digit ASCII character as the encryption keys.
  - **128-bit WEP:** input 26-digit Hex values (in the "A-F", "a-f" and "0-9" range) or 13-digit ASCII characters as the encryption keys.

Click **<Apply>** at the bottom of the screen to save the above configurations.

#### WPA Pre-Shared Key Encryption

Wi-Fi Protected Access (WPA) is an advanced security standard. You can use a pre-shared key to authenticate wireless stations and encrypt data during communication. It uses TKIP or CCMP (AES) to change the encryption key frequently. So the encryption key is not easy to be cracked by hackers. This is the best security available.

SSID Selection :	EnGeniusCCDD10 -
Broadcast SSID :	Enable 💌
WMM :	Enable 💌
Encryption :	WPA pre-shared key
WPA type :	• WPA(TKIP) C WPA2(AES) C WPA2 Mixed
Pre-shared Key type :	Passphrase 💌
Pre-shared Key :	
	Apply Cano

### **WPA-Radius Encryption**

Wi-Fi Protected Access (**WPA**) is an advanced security standard. You can use an external RADIUS server to authenticate wireless stations and provide the session key to encrypt data during communication.

It uses **TKIP** or CCMP (**AES**) to change the encryption key frequently. Press **<Apply>** button when you are done.

SSID Selection :	EnGeniusCCDD10 💌
Broadcast SSID :	Enable 💌
WMM :	Enable 💌

Enable wireless access control: Enable the wireless access control function

### Adding an address into the list

Enter the "MAC Address" and "Description" of the wireless station to be added and then click **<Add>**. The wireless station will now be added into the "MAC Address Filtering Table" below. If you are having any difficulties filling in the fields, just click "Reset" and both "MAC Address" and "Description" fields will be cleared.

#### Remove an address from the list

If you want to remove a MAC address from the "MAC Address Filtering Table", select the MAC address that you want to remove in the list and then click "Delete Selected". If you want to remove all the MAC addresses from the list, just click the **<Delete All>** button. Click **<Reset>** will clear your current selections.

### - Wi-Fi Protected Setup (WPS)

WPS is the simplest way to establish a connection between the wireless clients and the wireless router. You don't have to select the encryption mode and fill in a long encryption passphrase every time when you try to setup a wireless connection. You only need to press a button on both wireless client and wireless router, and the WPS will do the rest for you.

The wireless router supports two types of WPS: WPS via Push Button and WPS via PIN code. If you want to use the Push Button, you have to push a specific button on the wireless client or in the utility of the wireless client to start the WPS mode, and switch the wireless router to WPS mode. You can simply push the WPS button of the wireless router, or click the 'Start to Process' button in the web configuration interface. If you want to use the PIN code, you have to know the PIN code of the wireless client and switch it to WPS mode, then fill-in the PIN code of the wireless client through the web configuration interface of the wireless router.

Wireless	AP Router Mo				
Jasic Advanced Se	curity <u>Filter</u>	WPS	Client List	Policy	
WPS:	🗖 Enable

WPS via PIN:		St	art to Process	- Ê	

- **WPS:** Check the box to enable WPS function and uncheck it to disable the WPS function.
- WPS Current Status: If the wireless security (encryption) function of this wireless router is properly set, you'll see a 'Configured' message here. Otherwise, you'll see 'UnConfigured'.
- Self Pin Code: This is the WPS PIN code of the wireless router. You may need this information when connecting to other WPS-enabled wireless devices.

SSID: This is the network broadcast name (SSID) of the router.

- Authentication Mode: It shows the active authentication mode for the wireless connection.
- Passphrase Key: It shows the passphrase key that is randomly generated by the wireless router during the WPS process. You may need this information when using a device which doesn't support WPS.
- Interface: If device is set to repeater mode, you can choose "Client" interface to connect with other AP by using WPS, otherwise you may choose "AP" interface to do WPS with other clients.
- WPS via Push Button: Press the button to start the WPS process. The router will wait for the WPS request from the wireless devices within 2 minutes.
- WPS via PIN: You can fill-in the PIN code of the wireless device and press the button to start the WPS process. The router will wait for the WPS request from the wireless device within 2 minutes.

# Firewall Settings

The Broadband router provides extensive firewall protection by restricting connection parameters, thus limiting the risk of hacker attacks, and defending against a wide array of common Internet attacks. However, for applications that require unrestricted access to the Internet, you can configure a specific client/server as a Demilitarized Zone (DMZ).

		Description	n		Selec	t	
	VPN PP	TP Pass-T	hrough		V		
	VPN IP:	Sec Pass-1	Through		4		

# - Demilitarized Zone (DMZ)

If you have a client PC that cannot run an Internet application (e.g. Games) properly behind the NAT firewall, then you can open up the firewall restrictions to unrestricted two-way Internet access by defining a DMZ Host. The DMZ function allows you to re-direct all packets going to your WAN port IP address to a particular IP address in your LAN. The difference between the virtual server and the DMZ function is that the virtual server re-directs a particular service/Internet application (e.g. FTP, websites) to a particular LAN client/server, whereas DMZ re-directs all packets (regardless of services) from your WAN IP address to a particular LAN client/server.

### Remove URL Keyword

If you want to remove some URL keywords from the "Current URL Blocking Table", select the URL keyword you want to remove in the table and then click <Delete Selected>.

If you want remove all URL keywords from the table, click **<Delete All>** button. If you want to clear the selection and re-select again, just click **<Reset**>.

# Advanced Settings

# - Network Address Translation (NAT)

Network Address Translation (NAT) allows multiple users at your local site to access the Internet through a single Public IP Address or multiple Public IP Addresses. NAT provides Firewall protection from hacker attacks and has the flexibility to allow you to map Private IP Addresses to Public IP Addresses for key services such as Websites and FTP. Select Disable to disable the NAT function.

	Wireless Network Broadband Router							
NAT	Port map.	Port fw.	Port tri.	ALG	UPnP	QoS	Routing	

NAT(Network Address Translation) involves re-writing the source and/or destination addresses of IP packets as they pass though a Router or firewall, NAT enable multiple hosts on a private network to access the Internet using a single public IP address.

NAT : © Enable C Disable

Apply

# - Port Mapping

Port Mapping allows you to re-direct a particular range of service port numbers (from the Internet / WAN Port) to a particular LAN IP address. It helps you to host servers behind the router NAT firewall.

Enable Port Mapping: Enable or disable port mapping function.

Description: description of this setting.

Local IP: This is the local IP of the server behind the NAT firewall.

Protocol: This is the protocol type to be forwarded. You can choose to forward "TCP" or "UDP" packets only, or select "BOTH" to forward both "TCP" and "UDP" packets.

Port Range: The range of ports to be forward to the private IP.

#### Add Port Mapping

Fill in the "Local IP", "Protocol", "Port Range" and "Description" of the setting to be added and then click "Add". Then this Port Mapping setting will be added into the "Current Port Mapping Table" below. If you find any typo before adding it and want to retype again, just click <**Reset>** and the fields will be cleared.

#### **Remove Port Mapping**

If you want to remove a Port Mapping setting from the "**Current Port Mapping Table**", select the Port Mapping setting that you want to remove in the table and then click **D**<**Delete Selected>**. If you want to remove all Port Mapping settings from the table, click <**Delete All>** button. Click <**Reset>** will clear your current selections.

Click **<Apply>** at the bottom of the screen to save the above configurations.

### - Port Forwarding (Virtual Server)

Use the Port Forwarding (Virtual Server) function when you want different servers/clients in your LAN to handle different service/Internet application type (e.g. Email, FTP, Web server etc.) from the Internet. Computers use numbers called port numbers to recognize a particular service/Internet application type. The Virtual Server allows you to re-direct a particular service port number (from the Internet/WAN Port) to a particular LAN private IP address (See Glossary for an explanation on Port number).

Pub	lic Port :	Γ					

Enable Port Forwarding: Enable or disable Port Forwarding.

Description: The description of this setting.

- **Local IP / Local Port:** This is the LAN Client/Host IP address and Port number that the Public Port number packet will be sent to.
- **Protocol:** Select the port number protocol type (TCP, UDP or both). If you are unsure, then leave it to the default "both" setting. Public Port enters the service (service/Internet application) port number from the Internet that will be re-directed to the above Private IP address host in your LAN Network.
- **Public Port:** Port number will be changed to Local Port when the packet enters your LAN Network.

### **Add Port Forwarding**

Fill in the "Description", "Local IP", "Local Port", "Protocol" and "Public Port" of the setting to be added and then click <Add> button. Then this Virtual Server setting will be added into the "Current Port Forwarding Table" below. If you find any typo before adding it and want to retype again, just click <Reset> and the fields will be cleared.

### **Remove Port Forwarding**

If you want to remove Port Forwarding settings from the "Current Port Forwarding Table", select the Port Forwarding settings you want to remove in the table and then click "Delete Selected". If you want to remove all Port Forwarding settings from the table, just click the <Delete All> button. Click <Reset> will clear your current selections.

# - Port Triggering (Special Applications)

Some applications require multiple connections, such as Internet games, video Conferencing, Internet telephony and others. In this section you can configure the router to support multiple connections for these types of applications.

TAT	Port map.	Port fw.	Port tri.	ALG	UPnP	QoS	Routing
	Triggering, al nally do not fu Enable Trigg	nction when			vou to use Ini	ternet appli	cations which
	cription :				and a		
Pop	oular applicati	ons:	Select an appli	cation \star 📝	Add		
Trig	ger port :		~	1			
Trie	iger type :		Both 💌				
Put	lic Port :						
Pul	lic type :		Both 💌				

**Enable Trigger Port:** Enable or disable the Port Trigger function.

- **Trigger Port:** This is the outgoing (Outbound) range of port numbers for this particular application.
- **Trigger Type:** Select whether the outbound port protocol is "**TCP**", "**UDP**" or "**BOTH**".
- Public Port: Enter the In-coming (Inbound) port or port range for this type of application (e.g. 2300-2400, 47624)

Public Type: Select the Inbound port protocol type: "TCP", "UDP" or "BOTH"

**Popular Applications:** This section lists the more popular applications that require multiple connections. Select an application from the Popular Applications selection. Once you have selected an application, select a location (1-5) in the "Add" selection box and then click the <Add> button. This will automatically list the Public Ports required for this popular application in the location (1-5) you specified.

### Add Port Triggering

Fill in the "Trigger Port", "Trigger Type", "Public Port", "Public Type", "Public Port" and "Description" of the setting to be added and then Click <Add>. The Port Triggering setting will be added into the "Current Trigger-Port Table" below. If you happen to make a mistake, just click <Reset> and the fields will be cleared.

#### Remove Port Triggering

If you want to remove Special Application settings from the "**Current Trigger-Port Table**", select the Port Triggering settings you want to remove in the table and then click **<Delete Selected>**. If you want remove all Port Triggering settings from the table, just click the **<Delete All>** button. Click **<Reset>** will clear your current selections.

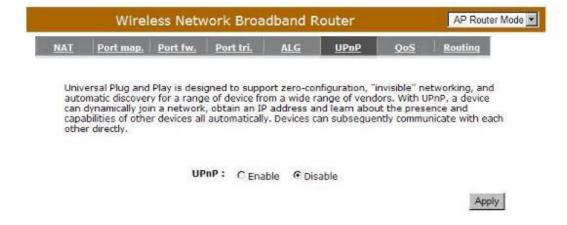

# - Application Layer Gateway (ALG)

You can select applications that need **ALG** support. The router will let the selected application to correctly pass through the NAT gateway.

### - UPNP

With UPnP, all PCs in you Intranet will discover this router automatically. So, you don't have to configure your PC and it can easily access the Internet through this router.

Enable/Disable UPnP: You can enable or Disable the UPnP feature here. After you enable the UPnP feature, all client systems that support UPnP, like Windows XP, can discover this router automatically and access the Internet through this router without having to configure anything. The NAT Traversal function provided by UPnP can let applications that support UPnP connect to the internet without having to configure the virtual server sections.

# - Quality of Service (QoS)

QoS can let you classify Internet application traffic by source/destination IP address and port number. You can assign priority for each type of application and reserve bandwidth for it. The packets of applications with higher priority will always go first. Lower priority applications will get bandwidth after higher priority applications get enough bandwidth. This can let you have a better experience in using critical real time services like Internet phone, video conference ...etc. All the applications not specified by you are classified as rule "Others".

### Priority Queue

This can put the packets of specific protocols in High/Low Queue. The packets in High Queue will process first.

	Wirel	ess Netv	work Broa	dband R	outer		AP Router	Mode
NAT	Port map.	Port fw.	Port tri.	ALG	<u>UPnP</u>	<u>005</u>	Routing	
select band impro	ted network t width, contro	raffic. The p lled jitter an acteristics.	Also important	QoS is to p uired by so	rovide priorit ne real-time	y including and interac	dedicated tive traffic), and	ł

Unli	mited Priori Loc h/Low Priori	ty Queue cal IP Addre	155	The I	De Paddress wi QoS	scription Il not be b limitation	ounded in the	

Unlimited Priority Queue: The LAN IP address will not be bounded in the QoS limitation.

High/Low Priority Queue: This can put the packets in the protocol and port range to High/Low QoS Queue.

### **Bandwidth Allocation:**

This can reserve / limit the throughput of specific protocols and port range. You can set the upper bound and Lower bound.

	Wireless Network Broadband Router								
TAI	Port map.	Port fw.	Port tri.	ALG	UPnP	QoS	Routing

	1		8080			1	Apply Reset

Old Password: Fill in the current password to allow changing to a new password.

New Password: Enter your new password and type it again in Repeat New Password for verification purposes

### Remote management

This allows you to designate a host in the Internet the ability to configure the Broadband router from a remote site. Enter the designated host IP Address in the Host IP Address field.

**Host Address:** This is the IP address of the host in the Internet that will have management/configuration access to the Broadband router from a remote site. If the Host Address is left 0.0.0.0 this means anyone can access the router's web-based configuration from a remote location, providing they know the password.

**Port:** The port number of the remote management web interface.

Enabled: Check to enable the remote management function.

### - Time

The Time Zone allows your router to reference or base its time on the settings configured here, which will affect functions such as Log entries and Firewall settings.

# **Time Setup:**

#### Synchronize with the NTP server

	Wireless Network Broadband Router

This page can diagnose the current network status

Address to Ping :		Start
Ping Result :	<b></b>	

### - Firmware

This page allows you to upgrade the router's firmware. To upgrade the firmware of your Broadband router, you need to download the firmware file to your local hard disk, and enter that file name and path in the appropriate field on this page. You can also use the Browse button to find the firmware file on your PC.

	Wire	less Netv	vork Bro	adband R	outer		AP Router Mode
Admin	Time	DDNS	Power	Diagnosis	<u>Firmware</u>	Back-up	Reset
is on t		d drive of yo					ou want to use e the firmware
						Apply	Cancel

Once you've selected the new firmware file, click < Apply> at the bottom of the

screen to start the upgrade process

#### - Back-up

This page allows you to save the current router configurations. When you save the configurations, you also can re-load the saved configurations into the router through the **Restore Settings**. If extreme problems occur you can use the **Restore to Factory Defaults** to set all configurations to its original default settings.

	Wireless Network Broadband Router AP Router										
<u>Admin</u>	<u>Time</u> <u>DDNS</u>	Power	Diagnosis	<u>Firmware</u>	Back-up	<u>Reset</u>					
	ACKUP to save the rout RE to restore the save										
	Restore to factory de	to restore the			JE RESTORE	TO PACION					
	ILT to force the router t	to restore the	factory defa		SERESTORE						

Backup Settings: This can save the Broadband router current configuration to a file named "<u>config.bin</u>" on your PC. You can also use the <Upload> button to restore the saved configuration to the Broadband router. Alternatively, you can use the "Restore to Factory Defaults" tool to force the Broadband router to perform a power reset and restore the original factory settings.

## - Reset

You can reset the broadband router when system stops responding correctly or stop functions.

Wireless Network Broadband Router							
Admin	Time	DDNS	Power	Diagnosis	Firmware	Back-up	Reset

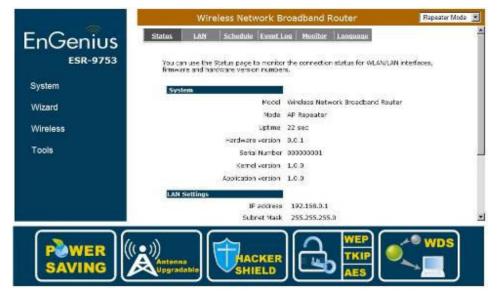

In the event the system stops responding correctly or stops functioning, you can perform a reset. Your settings will not be changed. To perform the reset, click on the APPLY button. You will be asked to confirm your decision. The reset will be completed when the LED Power light stops blinking.

Apply Cancel

# **13 Repeater Mode**

Repeater mode has limited settings compared to the AP mode. Choose "Repeater mode" on the top right corner of the configuration page.

System restarts and connects to the IP address <u>http://192.168..0.1</u> You will see the configuration homepage under "**REPEATER**" mode now.

# System

#### - Status

System status section allows you to monitor the current status of your router.

You can see the Uptime, hardware information, serial number as well as firmware version information.

LAN Settings: This page displays the Broadband router LAN port's current LAN & WLAN information.

**WLAN Settings:** Wireless configuration details such as SSID, Security settings, BSSID, Channel number, mode of operation are briefly shown.

### - LAN

The LAN Tabs reveals LAN settings which can be altered at will. If you are an entry level user, try accessing a website from your browser. If you can access website without a glitch, just do not change any of these settings.

Click **<Apply>** at the bottom of this screen to save the changed configurations.

<u>Status</u>	LAN	Schedule	Event Log	Monitor	Language

Backup Settings: This can save the Broadband router current configuration to a file named "config.bin" on your PC. You can also use the <Upload> button to restore the saved configuration to the Broadband router. Alternatively, you can use the "Restore to Factory Defaults" to force the Broadband router to perform a power reset and restore the original factory settings.

## - Reset

You can reset the broadband router when system stops responding correctly or stop functions.

# **Appendix A – FCC Interference Statement**

#### **Federal Communication Commission Interference Statement**

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

FCC Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

#### **IMPORTANT NOTE:**

#### FCC Radiation Exposure Statement:

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.

We declare that the product is limited in CH1~CH11 by specified firmware controlled in the USA.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

# **Appendix B – IC Interference Statement**

#### **Industry Canada statement:**

This device complies with RSS-210 of the Industry Canada Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

#### **IMPORTANT NOTE:**

#### Radiation Exposure Statement:

This equipment complies with IC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.

This device has been designed to operate with an antenna having a maximum gain of 2 dBi. Antenna having a higher gain is strictly prohibited per regulations of Industry Canada. The required antenna impedance is 50 ohms.
