RE: FCC ID: U2M-ZF7731

This is to certify that Ruckus Wireless model ZF7731, when sold in the United States, will be pre-configured and locked to the United States country code at time of manufacture. The end user will be unable to change the country code. Additionally, the locking mechanism is maintained in the hardware regardless of the software that is loaded.

The product must be professionally installed, as specified in the regulatory flyer which is included in the packaging. The only permitted configuration control allows the external antenna port to be enabled and the gain to be set. The permitted gain setting is specified in the regulatory flyer.

Sincerely,

Craig Owens  
Director, Hardware Engineering
