Test Standards:

#### FCC Part 15 15.249

The EUT described above is tested by Shenzhen Academy of Metrology and Quality Inspection EMC Laboratory to determine the maximum emissions from the EUT. Shenzhen Academy of Metrology and Quality Inspection EMC Laboratory is assumed full responsibility for the accuracy of the test results. The test data, data evaluation, test procedures, and equipment configurations shown in this report were made in accordance with the procedures given in ANSI C63.4 (2003) and the energy emitted by the sample EUT tested as described in this report is in compliance with conducted and radiated emission limits of FCC Rules Part 15.249.

The test report is valid for above tested sample only and shall not be reproduced in part without written approval of the laboratory.

# 2. GENERAL INFORMATION

#### 2.1. Report information

- 2.1.1.This report is not a certificate of quality; it only applies to the sample of the specific product/equipment given at the time of its testing. The results are not used to indicate or imply that they are application to the similar items. In addition, such results must not be used to indicate or imply that SMQ approves recommends or endorses the manufacture, supplier or use of such product/equipment, or that SMQ in any way guarantees the later performance of the product/equipment.
- 2.1.2. The sample/s mentioned in this report is/are supplied by Applicant, SMQ therefore assumes no responsibility for the accuracy of information on the brand name, model number, origin of manufacture or any information supplied.
- 2.1.3.Additional copies of the report are available to the Applicant at an additional fee. No third part can obtain a copy of this report through SMQ, unless the applicant has authorized SMQ in writing to do so.

#### 2.2. Laboratory Accreditation and Relationship to Customer

The testing report were performed by the Shenzhen Academy of Metrology and quality Inspection EMC Laboratory (Guangdong EMC compliance testing center), in their facilities located at Bldg. of Metrology & Quality Inspection, Longzhu Road, Nanshan District, Shenzhen, Guangdong, China. At the time of testing, Laboratory is accredited by the following organizations:

China National Accreditation Committee for Laboratories (CNAL) accredits the Laboratory for conformance to FCC standards, EMC international standards and EN standards. The Registration Number is L0579.

The Laboratory is listed in the United States of American Federal Communications Commission (FCC), and the registration number are 97379(open area test site) and 274801(semi anechoic chamber).

The Laboratory is listed in Voluntary Control Council for Interference by Information Technology Equipment (VCCI), and the registration number are **R-1974**(open area test site), **R-1966**(semi anechoic chamber), **C-2117**(mains ports conducted interference measurement) and **T-180**(telecommunication ports conducted interference measurement).

The Laboratory is registered to perform emission tests with Industry Canada (IC), and the registration number is IC4174.

**TUV Rhineland** accredits the Laboratory for conformance to IEC and EN standards, the registration number is **E2024086Z02**. Measurement Uncertainty

#### 2.3. Measurement Uncertainty

Conducted Disturbance : 9kHz~30MHz 3.5dB Radiated Disturbance: 30MHz~1000MHz 4.5dB 1GHz~18GHz 4.6dB

# 3. PRODUCT DESCRIPTION

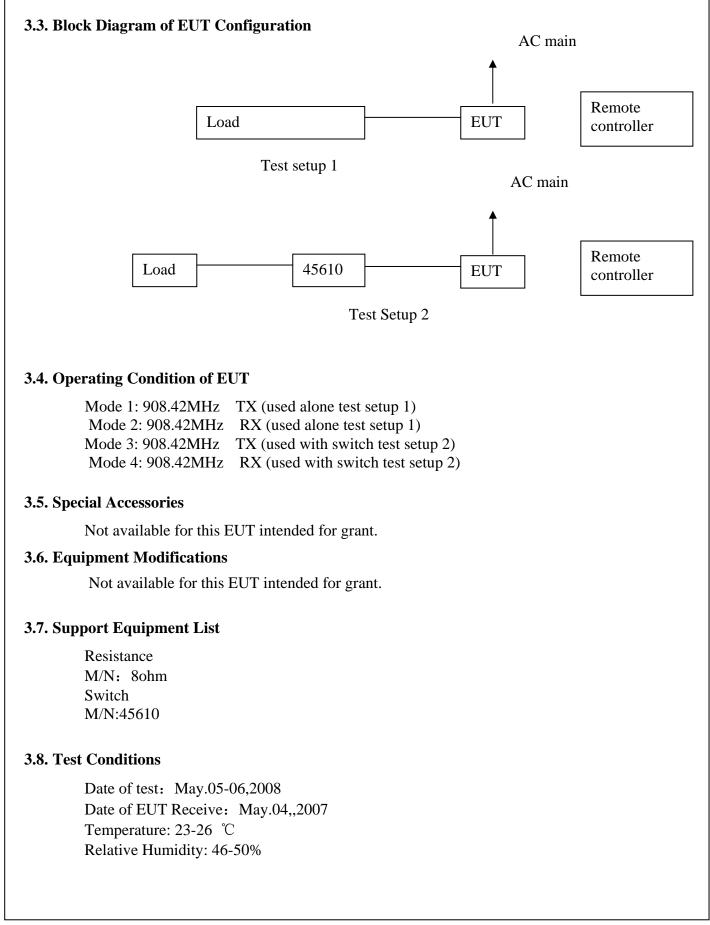

### **3.1. EUT Description**

| Description         | : | Z-Wave ON/OFF Relay Switch, In-Wall  |
|---------------------|---|--|
| Manufacturer        | : | SHEENWAY ASIA LTD  |
| Model Number        | : | ZW4001 45609 Rev2  |

#### Table 3 Radiated Disturbance Test Equipment

# 5. CONDUCTED DISTURBANCE TEST

#### 5.1. Test Standard and Limit

5.1.1.Test Standard

FCC Part 15 15.207

#### 5.1.2.Test Limit

| Fraguanay     | Maximum RF Line Voltage (dBµV) |               |  |  |
|---------------|--------------------------------|---------------|--|--|
| Frequency     | Quasi-peak Level               | Average Level |  |  |
| 150kHz~500kHz | 66 ~ 56 *                      | 56 ~ 46 *     |  |  |
| 500kHz~5MHz   | 56                             | 46            |  |  |
| 5MHz~30MHz    | 60                             | 50            |  |  |

• Decreasing linearly with logarithm of the frequency

• The lower limit shall apply at the transition frequency.

#### 5.2. Test Procedure

The EUT is put on a table of non-conducting material that is 80cm high. The vertical conducting wall of shielding is located 40cm to the rear of the EUT. The power line of the EUT is connected to the AC mains through a Artificial Mains Network (A.M.N.). A EMI test receiver (R&S Test Receiver ESCS30) is used to test the emissions form both sides of AC line. According to the requirements in Section 7 and 13 of ANSI C63.4-2003.Conducted emissions from the EUT measured in the frequency range between 0.15 MHz and 30MHz using CISPR Quasi-Peak and average detector mode.The bandwidth of EMI test receiver is set at 9kHz.

#### 5.3. Test Arrangement

The arrangement of the equipment is installed to meet the standards and operating in a manner, which tends to maximize its emission characteristics in a normal application. The detailed information refers to test picture.

#### 5.4. Test Data

The test was performed with two model. The worst case is TX mode. the follow was shown the worst data.

#### Model: 45609 Rev 2

Mode: 1

| 960  | ~  |     | 500             | 54.0             |  |  |  |  |

\* The lower limit shall apply at the transition frequency. \* The test distance is 3m.

#### 6.2. Test Procedure

The EUT is placed on a turntable, which is 0.8 meter above ground. The turntable can rotate 360 degrees to determine the position of the maximum emission level. EUT is set 3 meters away from the receiving antenna, which is mounted on an antenna tower. The antenna can move up and down between 1 to 4 meters to find out the maximum emission level. Broadband antenna is used as a receiving antenna. Both horizontal and vertical polarization of the antenna is set on test. In order to find out the max. emission, the relative positions of this hand-held transmitter(EUT) was rotated through three orthogonal axes according to the requirements in Section 8 and 13 of ANSI C63.4-2003.

The RBW of the EMI test receiver is :

30~1000MHz 120KHz 1000-18000MHz 1MHz

#### 6.3. Test Arrangement

The arrangement of the equipment is installed to meet the standards and operating in a manner, which tends to maximize its emission characteristics in a normal application. The detailed information refers to test picture.

 Table 14
 Restricted Band Radiated Emission Data

All the emission of the above band were less than the limit 20dB.

### 7. OCCUPIED BANDWIDTH

#### 7.1. Test Standard and Limit

7.1.1.Test Standard

FCC Part 15

#### 7.2. Test Procedure

1. The EUT was placed on a turn table which is 0.8m above ground plane.

2.Set EUT as normal operation

3.Set EMI test receiver(ESIB26) Center Frequency = fundamental frequency, RBW=10kHz, VBW= 30kHz, Span=200kHz.

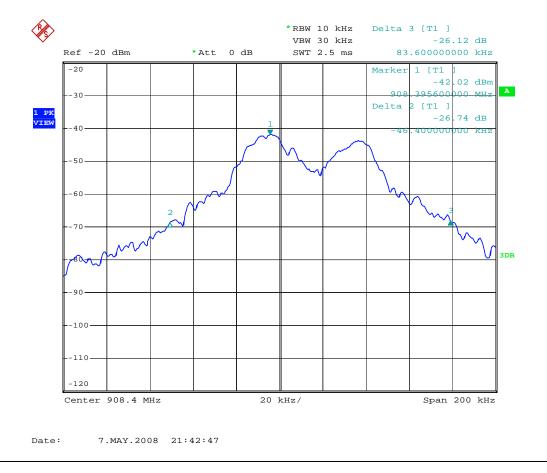

4. Set EMI test receiver(ESIB26) Max hold. Mark peak, -26dB.

#### 7.3. Test Arrangement

The arrangement of the equipment is installed to meet the standards and operating in a manner, which tends to maximize its emission characteristics in a normal application. The detailed information refers to test picture.

#### 7.4. Test Data

The test was performed with 45609. 26dB bandwidth =130.0 kHz

# 8. BAND EDGE

#### 8.1. Test Standard and Limit

8.1.1.Test Standard

FCC Part 15 15.249

#### 8.2. Band Edge FCC 15.249(d) Limit

Emission radiated outside of the specified frequency bands, except for harmonics, shall be attenuated by at least 50 dB below the level of the fundamental or to the general radiated emission limits in Section 15.209, whichever is the lesser attenuation

#### **8.3.** Test Procedure

1. Check the calibration of the measuring instrument using either an internal calibrator or a known signal from an external generator.

2. Position the EUT without connection to measurement instruments. Turn on the EUT and connect its antenna terminal to measurement instrument via a low loss cable. Then set it to any one measured frequency within its operating range and make sure the instrument is operated in its linear range.

3. Measure the highest amplitude appearing on spectral display and set it as reference level. Plot the graph with marking the highest point and edge frequency.

4. Repeat above procedures until all measured frequencies were complete.

#### 8.4. Test Arrangement

The arrangement of the equipment is installed to meet the standards and operating in a manner, which tends to maximize its emission characteristics in a normal application. The detailed information refers to test picture.

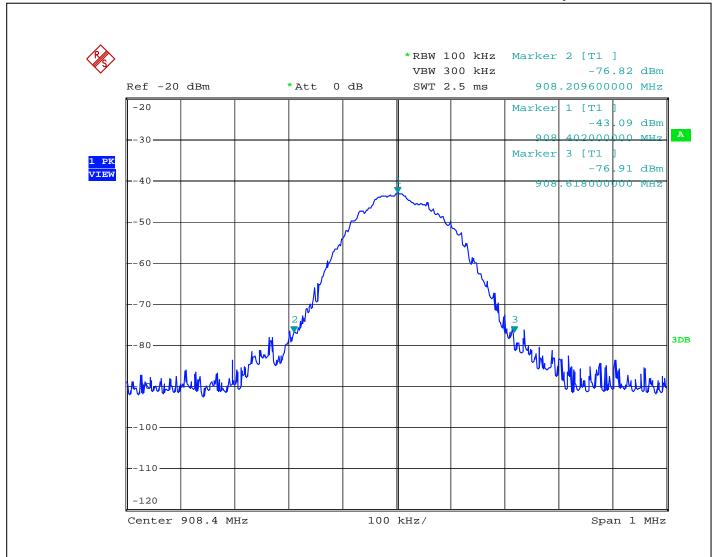

#### 8.5. Test Data

The test was performed with 45609. All the emission outside 908.209 to 908.618 is lower than 46 dB (  $\mu$  V/m).

NOTE 1: The band edge emission plot of on page 26 low frequency shows33.2dBc. The emission of carrier strength list in the test result of low frequency is 78.1dBuV/m (QP), so the maximum field strength in restrict band is78.1-33.2=44.9dBuV/m which is under 46dBuV/m limit.

NOTE 2: The band edge emission plot of on page 26 high frequency shows 33.8dBc. The emission of carrier strength list in the test result of high frequency is 78.1dBuV/m (QP), so the maximum field strength in restrict band is 78.1-33.8=44.3dBuV/m which is under 46dBuV/m limit.

Date: 7.MAY.2008 21:39:20

# 9. ANTENNA REQUIREMENT

According to Section 15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The EUT has a built in antenna which is integrated on the PCB, this is permanently attached antenna and meets the requirements of this section.
