S&C Electric Company 1135 Atlantic Avenue Alameda, CA 94501

Dear Prakash Ramadass,

Enclosed is the EMC Wireless test report for compliance testing of the S&C Electric Company, 1720 IntelliCom, tested to the requirements of Title 47 of the Code of Federal Regulations (CFR), Part 90 Subpart 7 for Land Mobile Radio Services and RSS-111, Issue 3, June 2009.

Thank you for using the services of MET Laboratories, Inc. If you have any questions regarding these results or if MET can be of further service to you, please feel free to contact me.

Sincerely yours, MET LABORATORIES, INC.

Jennifer Warnell Documentation Department

Engineering Statement: The measurements shown in this report were made in accordance with the procedures indicated, and the emissions from this equipment were found to be within the limits applicable. I assume full responsibility for the accuracy and completeness of these measurements, and for the qualifications of all persons taking them. It is further stated that upon the basis of the measurements made, the equipment tested is / is not capable of operation in accordance with the requirements of Part 90, Subpart Y of the FCC Rules and Industry Canada standard RSS-111, Issue 3, June 2009 under normal use and maintenance.

Shawn McMillen, Wireless Manager, Electromagnetic Compatibility Lab

Report Status Sheet

Revision Report Date		Reason for Revision	
Ø	September 12, 2011	Initial Issue.	

Table of Contents

1.	Executive Summary	1
	1.1. Testing Summary	
2.	Equipment Configuration	3
	2.1. Overview	4
	2.2. Test Site	5
	2.3. Description of Test Sample	5
	2.4. Equipment Configuration	5
	2.5. Support Equipment	5
	2.6. Ports and Cabling Information	6
	2.7. Method of Monitoring EUT Operation	7
	2.8. Modifications	
	2.8.1. Modifications to EUT	
	2.8.2. Modifications to Test Standard	8
	2.9. Disposition of EUT	
3.	Electromagnetic Compatibility Criteria for Intentional Radiators	9
	3.1. Peak Power Output	
4.	Electromagnetic Compatibility Occupied Bandwidth Requirements	18
	4.1. Occupied Bandwidth (Emission Masks)	
5.	Electromagnetic Compatibility Spurious Emissions at Antenna Terminal Requirements	
	5.1. Spurious Emissions at Antenna Terminals	
6.	Electromagnetic Compatibility Radiated Emissions Requirements	
	6.1. Radiated Emissions (Substitution Method)	35
7.	Electromagnetic Compatibility Frequency Stability Requirements	
	7.1. Frequency Stability	42
8.	RF Exposure Requirements	45
9.	Electromagnetic Compatibility Receiver Spurious Requirements	
	9.1. Receiver Spurious Emissions	
	Test Equipment	
11.	Certification Label & User's Manual Information	
	11.1. Verification Information	
	11.2. Label and User's Manual Information	55

All references to section numbers are taken directly from the standard/specification used. Only sections requiring testing or evaluation are included.

Executive Summary CFR Title 47 Part 90 Subpart Y RSS-111, Issue 3, June 2009

Executive Summary

1. Testing Summary

These tests were conducted on a sample of the equipment for the purpose of demonstrating compliance with Part 90, Subpart Y. All tests were conducted using measurement procedure ANSI TIA/EIA-603-A-2004.

		Conformance			Comments	
Title 47 of the CFR, Part 90, Subport V and ECC 04 265	RSS-111, Issue 3, June	Yes	No	N/A	Comments	
Subpart Y, and FCC 04-265 Reference and Test Description	2009 Reference	Yes - Equipment complies with the Requirement No - Equipment does not comply with the Requirement N/A - Not applicable to the equipment under tests				
2.1046; 90.1215(a) Peak Power Output	RSS-111, Section 5.3	~			Measured emissions below applicable limits.	
2.1046; 90.1215(a) Peak Power Spectral Density	RSS-111, Section 4.2	~			Measured emissions below applicable limits.	
2.1047(a) Modulation Characteristics	N/A			~	EUT is non-voice, data only.	
2.1049; 90.210(M) Occupied Bandwidth (Emission Mask)	RSS-111, Section 5.3	~			Measured emissions below applicable limits.	
2.1051; 90.210(M) Spurious Emissions at Antenna Terminals	RSS-111, Section 5.4	~			Measured emissions below applicable limits.	
2.1053; 90.210(M) Radiated Spurious Emissions	RSS-111, Section 5.4	~			Measured emissions below applicable limits.	
2.1055(a) (1); 90.213 Frequency Stability over Temperature Variations	RSS-111, Section 5.2	~			Measured emissions below applicable limits.	
2.1055(d) (2) Frequency Stability over Voltage Variations	RSS-111, Section 5.2	~			Measured emissions below applicable limits.	
90.214 Transient Frequency Behavior	RSS-111, Section 5.2			~	EUT operating frequency is at 4.9 GHz.	

Electromagnetic Compatibility Equipment Configuration CFR Title 47 Part 90 Subpart Y RSS-111, Issue 3, June 2009

Equipment Configuration

2. Equipment Configuration

2.1. Overview

MET Laboratories, Inc. was contracted by S&C Electric Company to perform testing on the 1720 IntelliCom under purchase order number 3035.

This document describes the test setups, test methods, required test equipment, and the test limit criteria used to perform compliance testing of the S&C Electric Company., 1720 IntelliCom.

An EMC evaluation to determine compliance of the TB 4.9 with the requirements of Part 90, Subpart Y, was conducted. (All references are to the most current version of Title 47 of the Code of Federal Regulations in effect). In accordance with §2.1033, the following data is presented in support of the Certification of the TB4.9. S&C Electric Company should retain a copy of this document and it should be kept on file for at least five years after the manufacturing of the EUT has been **permanently** discontinued. The results obtained relate only to the item(s) tested.

Model(s) Tested:	1720 IntelliCom			
Model(s) Covered:	1720 IntelliCom			
	Primary Power Source: 23	BOVAC		
	FCC ID: U3D-INTELLIC			
	IC: 5349C-INTELLICON	И		
	Type of Modulations:	OFDM (Orthogonal Frequency Division multiplexing)		
EUT		4M14D7D (5 MHz)		
Specifications:	Emission Designators:	8M27D7D (10 MHz)		
		16M44D7D (20 MHz)		
	Peak Output Power:	Peak Power Range: 23.51 - 24.28 dBm		
	Equipment Code:	TNB		
	EUT Frequency Ranges:	4940-4990MHz		
Analysis:	The results obtained relate	e only to the item(s) tested.		
	Temperature (15-35° C):			
Environmental Test Conditions:	Relative Humidity (30-60%):			
	Barometric Pressure (860-1060 mbar):			
Evaluated by:	Anderson Soungpanya			
Report Date(s):	September 12, 2011			

2.2. Test Site

All testing was performed at MET Laboratories, Inc., 3162 Belick Street, Santa Clara, CA 95054. All equipment used in making physical determinations is accurate and bears recent traceability to the National Institute of Standards and Technology.

Radiated Emissions measurements were performed in a semi-anechoic chamber (equivalent to an Open Area Test Site). In accordance with §2.948(a)(3), a complete site description is contained at MET Laboratories.

2.3. Description of Test Sample

The S&C Electric Company 1720 IntelliCom, Equipment Under Test (EUT), is a Dual Radio Wireless Mesh Node.

2.4. Equipment Configuration

The EUT was set up as outlined in Figure 1, Block Diagram of Test Setup. All cards, racks, etc., incorporated as part of the EUT is included in the following list.

Ref. ID Slot # Name / Description		Model Number	Serial Number	Rev. #	
N/A	N/A	IntelliCom WAN 1720 Mesh Node	1720	N/A	1

 Table 1. Equipment Configuration

2.5. Support Equipment

S&C Electric Company supplied support equipment necessary for the operation and testing of the 1720 IntelliCom. All support equipment supplied is listed in the following Support Equipment List.

Ref. IDName / DescriptionN/ALAPTOP COMPUTER		Manufacturer	Model Number	
		IBM	T42	
N/A	LAPTOP COMPUTER	DELL	S300	

Table 2. Support Equipment

Ref. ID	Port name on EUT	Cable Description or reason for no cable	Qty.	Length (m)	Shielded (Y/N)	Termination Box ID & Port Name
N/A	PORT 1	ETHERNET	1	18	Ν	N/A
N/A	PORT 2 – 3	NOT CONNECTED; ONLY 1 ETHERNET CONNECTION IS NECESSARY TO COMMUNICATE WITH EUT	N/A	N/A	N/A	N/A
N/A	AC POWER	3 PIN CIRCULAR CONNECTOR	1	5	Ν	N/A
N/A	USB	NOT USED; DISABLED	N/A	N/A	N/A	N/A

2.6. Ports and Cabling Information

 Table 3. Ports and Cabling Information

Figure 1. Block Diagram of Test Configuration

2.7. Method of Monitoring EUT Operation

The UUT has the Atheros Radio Test (ART) software loaded. The UUT can be put into continuous TX or RX using ART. The Mesh Node has a default IP address of 192.168.224.150. An external computer can ping this address to verify the Ethernet PHY and processor are running.

2.8. Modifications

2.8.1. Modifications to EUT

1720 IntelliCom did not pass conducted line emission (15.207) testing. It was determined that additional common mode filtering was necessary on the line and neutral AC power input. In addition, improper trace routing caused arcing between the AC input and ground. The ground plane was removed in the vicinity of the common mode filtering and power pins.

The following was used to resolve this:

Added 100 uH SMT inductor between pin 1 of J7 and node formed by C5, D3, and D4.

Added 100 uH SMT inductor between pin 2 of F1 and node formed by C6, D3, and D4.

2.8.2. Modifications to Test Standard

No modifications were made to the test standard.

2.9. Disposition of EUT

The test sample including all support equipment submitted to the Electro-Magnetic Compatibility Lab for testing was returned to S&C Electric Company upon completion of testing.

Electromagnetic Compatibility Intentional Radiators CFR Title 47, Part 90, Subpart Y RSS-111, Issue 3, June 2009

III. Electromagnetic Compatibility Criteria for Intentional Radiators

3. Electromagnetic Compatibility RF Power Output Requirements

3.1. RF Power Output

Test Requirement(s): §2.1046 and §90.1215(a) with FCC 04-265

Test Procedures: As required by 47 CFR 2.1046, *RF power output measurements* were made at the RF output terminals using a Spectrum Analyzer.

A laptop was connected to EUT to control the RF power output and frequency channel. The EUT was connected to a Spectrum Analyzer via an attenuator to measure the Peak power. The EUT power was adjusted enough to produce maximum output power as specified in the owner's manual. The output power was then recorded with peak reading. Measurements were made at the low, mid and high channels.

Test Results: Equipment complies with 47CFR 2.1046 and 90.1215(a) with FCC 04-265.

All RF Power output measurements were direct connection to RF output Terminal of EUT from a Spectrum Analyzer.

RF Power Output								
Frequency (MHz)	Peak Power (dBm)

3.2. Peak Power Spectral Density

Test Requirement(s): §90.1215(a) with FCC 04-265

Test Procedures: As required by 47 CFR 2.1046, *RF power output measurements* were made at the RF output terminals using a Directional Coupler through a Spectrum Analyzer and Power Meter.

A laptop was connected to EUT to control the RF power output and frequency channel. The EUT was connected to a Spectrum Analyzer in order to measure the power level. The Spectrum Analyzer was set to a RBW = 1 & VBW = 3 MHz. The EUT power was adjusted at the maximum output power level. The max hold key from the Spectrum Analyzer was activated capturing the modulated envelope of the EUT. The Peak Power Spectral Density was then recorded. Measurements were made at the low, mid and high channels.

Test Results: Equipment complies with 47 CFR 2.1046 and 90.1215(a) with FCC 04-265 (High Power devices). The EUT does not exceed 21dBm/MHz peak power spectral density at the carrier frequency.

The following pages show measurements of Peak Power Spectral Density plots which is recorded below:

4. Electromagnetic Compatibility Occupied Bandwidth Requirements

4.1. Occupied Bandwidth (Emission Mask)

Test Requirement(s): §2.1049 and §90.210 (M) with FCC 04-265 (Emissions Mask M)

Test Procedures: As required by 47 CFR 2.1049, *occupied bandwidth measurements* were made at the RF output terminals using a Spectrum Analyzer.

A laptop was connected to EUT to control the RF power output and frequency channel. The EUT was connected to a Spectrum Analyzer via attenuator. The measured highest Average Power was set relative to zero dB reference. The RBW of the Spectrum Analyzer was set to at least 1% of the channel bandwidth. The EUT power was adjusted at the maximum output power level. Measurements were carried out at the low, mid and high channels of the TX band.

Test Results: Equipment complies with Section 2.1049 and 90.210(M) with FCC 04-265 (Emission Mask M). The EUT does not exceed the Emission Masks limit.

The following pages show measurements of Emission Mask plots:

5. Electromagnetic Compatibility Spurious Emissions at Antenna Terminal Requirements

5.1. Spurious Emissions at Antenna Terminals

Test Requirement(s):	§2.1051 and §90.210(M) with FCC 04-265
Test Procedures:	As required by 47 CFR 2.1051, <i>spurious emissions at antenna terminal measurements</i> were made at the RF output terminals using a Spectrum Analyzer.
	A laptop was connected to EUT to control the RF power output and frequency channel. The EUT was connected to a Spectrum Analyzer and a Power Meter to monitor the output power level. The Spectrum Analyzer was set to sweep 30 MHz and up to 10 th harmonic of the fundamental or 40GHz which ever is the lesser. Measurements were made at the low, mid and high channels. The Conducted Spurious Emissions <i>Limit</i> is obtained by the following:
	The Conducted Spurious Emissions Limit is obtained by the following.
Test Results:	Equipment complies with Section 2.1051 and 90.210(M) with FCC 04-265.
Test Engineer(s):	Anderson Soungpanya
Test Date(s):	09/11/09

Electromagnetic Compatibility Radiated Emissions Requirements

5.2. Radiated Emissions (Substitution Method)

Test Requirement(s):	§2.1053 and §90.210		
Test Procedures:	As required by 47 CFR 2.1053, <i>field strength of radiated spurious measurements</i> were made in accordance with the procedures of TIA/EIA-603-A-2001 "Land Mobile FM or PM Communications Equipment Measurement and Performance Standards".		
	Radiated emission measurements were performed inside a 10 meter semi-anechoic chamber. The EUT was set at a distance of 3m from the receiving antenna. The EUT's RF ports were terminated to 500hm load. The EUT was set to transmit at the low, mid and high channels of the transmitter frequency range at its maximum power level. The EUT was rotated about 360 ⁰ and the receiving antenna scanned from 1-4m in order to capture the maximum emission. A calibrated antenna source was positioned in place of the EUT and the previously recorded signal was duplicated. The maximum EIRP of the emission was calculated by adding the forward power to the calibrated source plus its appropriate gain value. These steps were carried out with the receiving antenna in both vertical and horizontal polarization. Harmonic emissions up to the 10 th or 40GHz, which ever was the lesser, were investigated.		
	No peaks were found above 18 GHz.		
	Note: Signal substitution was not performed due to the fact that only noise floor was detected from $30 \text{ MHz} - 40 \text{ GHz}$.		
Test Results:	Equipment complies with Section 2.1053 and 90.210.		
Test Engineer(s):	Anderson Soungpanya		
Test Date(s):	09/11/09

Electromagnetic Compatibility Frequency Stability Requirements

5.3. Frequency Stability

Test Requirement(s):	§2.1055 and §90.213
Test Procedures:	As required by 47 CFR 2.1055, <i>Frequency Stability measurements</i> were made at the RF output terminals using a Directional Coupler through a Spectrum Analyzer and Power Meter.
	The EUT was placed in the Environmental Chamber and support equipments are outside the chamber on a table. The EUT was set to transmit a CW signal corresponding to the low, mid and high Channels for 5, 10, & 20MHz Bandwidths. The frequency counter option on the Spectrum Analyzer was used to measure frequency deviations. The frequency drift was investigated for every 10^{C} increment until the unit is stabilized then recorded the reading in tabular format with the temperature range of -30 to 50^{C} . Voltage supplied to EUT is 120 VAC reference temperature was done at 20 ^C . The voltage was varied by \pm 15 % of nominal
Test Results:	Equipment complies with Section 2.1055 and 90.213
Test Engineer(s):	Anderson Soungpanya
Test Date(s):	09/11/09

6. **RF Exposure Requirements**

- **RF Exposure Requirements: §90.1217, §1.1307(b)(1) and §1.1307(b)(2):** Systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy levels in excess of the Commission's guidelines.
- **RF Radiation Exposure Limit: §1.1310:** As specified in this section, the Maximum Permissible Exposure (MPE) Limit shall be used to evaluate the environmental impact of human exposure to radiofrequency (RF) radiation as specified in Sec. 1.1307(b), except in the case of portable devices which shall be evaluated according to the provisions of Sec. 2.1093 of this chapter.

MPE Limit Calculation: EUT's operating frequencies @ 4940-4990 MHz; highest conducted power = 24.28 dBm (peak) therefore, Limit for Uncontrolled exposure: 1 mW/cm² or 10 W/m²

Equation from page 18 of OET 65, Edition 97-01

EUT with 9 dBi Omni Antenna

 $S = PG / 4\pi R^{2} \text{ or } R = \sqrt{PG / 4\pi S}$ where, S = Power Density (1 mW/cm²) P = Power Input to antenna (267.92 mW) G = Antenna Gain (7.94 numeric) R = (267.92*7.94/4*3.14)^{1/2} = (2128.14/12.56)^{1/2} = 13.02cm_in order to comply with 1 mW/cm² S = (267.92*7.94/4*3.14*20.0²) = (2128.14/5024) = 0.43mW/cm²@ 20cm separation

EUT with 16 dBi Sector Antenna

 $S = PG / 4\pi R^2$ or $R = \sqrt{PG} / 4\pi S$

where, $S = Power Density (1 mW/cm^2)$

P = Power Input to antenna (267.92mW)

G = Antenna Gain (39.81 numeric)

 $R = (267.92*39.81/4*3.14)^{1/2} = (10665.96/12.56)^{1/2} = 29.14 \text{ cm_in order to comply with 1 mW/cm^2}$ $S = (267.92*39.81/4*3.14*20.0^2) = (10665.96/5024) = 2.12 \text{mW/cm^2} @ 20 \text{ cm separation}$

EUT with 19 dBi Panel Antenna

 $S = PG / 4\pi R^2$ or $R = \int PG / 4\pi S$

where, $S = Power Density (1 mW/cm^2)$

P = Power Input to antenna (267.92 mW)

G = Antenna Gain (79.43 numeric)

 $R = (267.92*79.43/4*3.14)^{1/2} = (21281.39/12.56)^{1/2} = 41.16 \text{ cm_in order to comply with } 1 \text{ mW/cm}^2$ $S = (267.92*79.43/4*3.14*20.0^2) = (21281.39/5024) = 4.23 \text{ mW/cm}^2 @ 20 \text{ cm separation}$

7. Electromagnetic Compatibility Receiver Spurious Requirements

7.1. Receiver Spurious Emissions

Test Requirement: The following receiver spurious emission limits shall be complied with:

a) If a radiated measurement is made, all spurious emissions shall comply with the limits of Table 6.

Spurious Frequency (MHz)	Field Strength (microvolt/m at 3 metres)		
30-88	100		
88-216	150		
216-960	200		
Above 960	500		

Table 6. Spurious Emission Limits for Receivers

- b) If a conducted measurement is made, no spurious output signals appearing at the antenna terminals shall exceed 2 nanowatts per any 4 kHz spurious frequency in the band 30-1000 MHz, or 5 nanowatts above 1 GHz.
- **Test Procedure:** The receiver spurious emissions were tested in compliance with the limits of Table 12. The testing was performed conducted.
- Test Results: The EUT was compliant with the Receiver Spurious Emission limits of this requirement.
- Test Engineer(s): Anderson Soungpanya

Test Date(s): 09/11/09

Electromagnetic Compatibility Certification & User's Manual Information CFR Title 47 Part 90 Subpart Y RSS-111, Issue 3, June 2009

Certification & User's Manual Information

9. Certification Label & User's Manual Information

9.1. Certification Information

The following is extracted from Title 47 of the Code of Federal Regulations, Part 2, Subpart I — Marketing of Radio frequency devices:

§ 2.801 Radio-frequency device defined.

As used in this part, a radio-frequency device is any device which in its operation is capable of Emitting radio-frequency energy by radiation, conduction, or other means. Radio- frequency devices include, but are not limited to:

- (a) The various types of radio communication transmitting devices described throughout this chapter.
- (b) The incidental, unintentional and intentional radiators defined in Part 15 of this chapter.
- (c) The industrial, scientific, and medical equipment described in Part 18 of this chapter.
- (d) Any part or component thereof which in use emits radio-frequency energy by radiation, conduction, or other means.

§ 2.803 Marketing of radio frequency devices prior to equipment authorization.

- (a) Except as provided elsewhere in this chapter, no person shall sell or lease, or offer for sale or lease (including advertising for sale or lease), or import, ship or distribute for the purpose of selling or leasing or offering for sale or lease, any radio frequency device unless:
 - (1) In the case of a device subject to certification, such device has been authorized by the Commission in accordance with the rules in this chapter and is properly identified and labeled as required by §2.925 and other relevant sections in this chapter; or
 - (2) In the case of a device that is not required to have a grant of equipment authorization issued by the Commission, but which must comply with the specified technical standards prior to use, such device also complies with all applicable administrative (including verification of the equipment or authorization under a Declaration of Conformity, where required), technical, labeling and identification requirements specified in this chapter.
- (d) Notwithstanding the provisions of paragraph (a) of this section, the offer for sale solely to business, commercial, industrial, scientific or medical users (but not an offer for sale to other parties or to end users located in a residential environment) of a radio frequency device that is in the conceptual, developmental, design or pre-production stage is permitted prior to equipment authorization or, for devices not subject to the equipment authorization requirements, prior to a determination of compliance with the applicable technical requirements *provided* that the prospective buyer is advised in writing at the time of the offer for sale that the equipment is subject to the FCC rules and that the equipment will comply with the appropriate rules before delivery to the buyer or to centers of distribution.

- (e)(1) Notwithstanding the provisions of paragraph (a) of this section, prior to equipment authorization or determination of compliance with the applicable technical requirements any radio frequency device may be operated, but not marketed, for the following purposes and under the following conditions:
 - (*i*) Compliance testing;
 - (ii) Demonstrations at a trade show provided the notice contained in paragraph (c) of this section is displayed in a conspicuous location on, or immediately adjacent to, the device;
 - (iii) Demonstrations at an exhibition conducted at a business, commercial, industrial, scientific or medical location, but excluding locations in a residential environment, provided the notice contained in paragraphs
 (c) or (d) of this section, as appropriate, is displayed in a conspicuous location on, or immediately adjacent to, the device;
 - (iv) Evaluation of product performance and determination of customer acceptability, provided such operation takes place at the manufacturer's facilities during developmental, design or pre-production states; or
 - (v) Evaluation of product performance and determination of customer acceptability where customer acceptability of a radio frequency device cannot be determined at the manufacturer's facilities because of size or unique capability of the device, provided the device is operated at a business, commercial, industrial, scientific or medical user's site, but not at a residential site, during the development, design or pre-production stages.
- (e)(2) For the purpose of paragraphs (e)(1)(iv) and (e)(1)(v) of this section, the term *manufacturer's facilities* includes the facilities of the party responsible for compliance with the regulations and the manufacturer's premises, as well as the facilities of other entities working under the authorization of the responsible party in connection with the development and manufacture, but not the marketing, of the equipment.
- (f) For radio frequency devices subject to verification and sold solely to business, commercial, industrial, scientific and medical users (excluding products sold to other parties or for operation in a residential environment), parties responsible for verification of the devices shall have the option of ensuring compliance with the applicable technical specifications of this chapter at each end user's location after installation, provided that the purchase or lease agreement includes a provision that such a determination of compliance be made and is the responsibility of the party responsible for verification of the equipment.

The following is extracted from Title 47 of the Code of Federal Regulations, Part 2, Subpart Y — Equipment Authorization Procedures:

§ 2.901 Basis and Purpose

- (a) In order to carry out its responsibilities under the Communications Act and the various treaties and international regulations, and in order to promote efficient use of the radio spectrum, the Commission has developed technical standards for radio frequency equipment and parts or components thereof. The technical standards applicable to individual types of equipment are found in that part of the rules governing the service wherein the equipment is to be operated.¹ *In addition to the technical standards provided, the rules governing the service may require that such equipment be verified by the manufacturer or importer*, be authorized under a Declaration of Conformity, or receive an equipment authorization from the Commission by one of the following procedures: certification or registration.
 - (b) The following sections describe the verification procedure, the procedure for a Declaration of Conformity, and the procedures to be followed in obtaining certification from the Commission and the conditions attendant to such a grant, whichever is applicable.

§ 2.902 Certification.

- (a) Certification is an equipment authorization issued by the Commission, based on representation and test data submitted by the applicant.
- (b) Certification attaches to all units subsequently marketed by the grantee which are identical (see Section 2.908) to the sample tested except for permissive changes or other variations authorized by the Commission pursuant to Section 2.1043.

¹ In this case, the equipment is subject to the rules of Part 15. More specifically, the equipment falls under Subpart B (of Part 15), which deals with unintentional radiators.

§ 2.948 Description of measurement facilities.

- (a) Each party making measurements of equipment that is subject to an equipment authorization under Part 15 or Part 18 of this chapter, regardless of whether the measurements are filed with the Commission or kept on file by the party responsible for compliance of equipment marketed within the U.S. or its possessions, shall compile a description of the measurement facilities employed.
 - (1) If the measured equipment is subject to the verification procedure, the description of the measurement facilities shall be retained by the party responsible for verification of the equipment.
 - (i) If the equipment is verified through measurements performed by an independent laboratory, it is acceptable for the party responsible for verification of the equipment to rely upon the description of the measurement facilities retained by or placed on file with the Commission by that laboratory. In this situation, the party responsible for the verification of the equipment is not required to retain a duplicate copy of the description of the measurement facilities.
 - (ii) If the equipment is verified based on measurements performed at the installation site of the equipment, no specific site calibration data is required. It is acceptable to retain the description of the measurement facilities at the site at which the measurements were performed.
 - (2) If the equipment is to be authorized by the Commission under the certification procedure, the description of the measurement facilities shall be filed with the Commission's Laboratory in Columbia, Maryland. The data describing the measurement facilities need only be filed once but must be updated as changes are made to the measurement facilities or as otherwise described in this section. At least every three years, the organization responsible for filing the data with the Commission shall certify that the data on file is current.

9.2. Label and User's Manual Information

The following is extracted from Title 47 of the Code of Federal Regulations, Part 15, Subpart A — General:

§ 15.19 Labeling requirements.

- (a) In addition to the requirements in Part 2 of this chapter, a device subject to certification or verification shall be labeled as follows:
 - (1) Receivers associated with the operation of a licensed radio service, e.g., FM broadcast under Part 73 of this chapter, land mobile operation under Part 90, etc., shall bear the following statement in a conspicuous location on the device:

This device complies with Part 15 of the FCC Rules. Operation is subject to the condition that this device does not cause harmful interference.

(2) A stand-alone cable input selector switch, shall bear the following statement in a conspicuous location on the device:

This device is verified to comply with Part 15 of the FCC Rules for use with cable television service.

(3) All other devices shall bear the following statement in a conspicuous location on the device:

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

- (4) Where a device is constructed in two or more sections connected by wires and marketed together, the statement specified under paragraph (a) of this section is required to be affixed only to the main control unit.
- (5) When the device is so small or for such use that it is not practicable to place the statement specified under paragraph (a) of this section on it, the information required by this paragraph shall be placed in a prominent location in the instruction manual or pamphlet supplied to the user or, alternatively, shall be placed on the container in which the device is marketed. However, the FCC identifier or the unique identifier, as appropriate, must be displayed on the device.

§ 15.21 Information to user.

The users manual or instruction manual for an intentional or unintentional radiator shall caution the user that changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

The following is extracted from Title 47 of the Code of Federal Regulations, Part 15, Subpart B — Unintentional Radiators:

§ 15.105 Information to the user.

(a) For a Class B digital device or peripheral, the instructions furnished the user shall include the following or similar statement, placed in a prominent location in the text of the manual:

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a residential environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
