Subject: MPE calculation

FCC ID: U4F0022

To whom it may concern

Here Datalogic declares that the new antenna ("ANTENNA CABLE GM4100-910") has a gain of -4.5dBi, which is lower than that of the antennas previously approved, and so the resulting RF exposure is less than that previously reported and consequently the existing MPE calculation still represents the worst case.

Yours faithfully,

Name: Gamberini Alberto

Signature:

Title: Regulatory Engineer HHS

Applicant: Datalogic ADC Srl
