

RADIO TEST REPORT

1110792-3

RF performance

EQUIPMENT UNDER TEST

Equipment: AO Interface Unit
Type / model: N/A
Manufacturer: St Jude Medical Systems AB
Tested by request of: St Jude Medical Systems AB

SUMMARY

The equipment complies with the requirements of the following standards:

47 CFR, Part 15, Subpart B (2010) and Subpart C (2010);

RSS-GEN, Issue 3 (December 2010)
RSS-210, Issue 8 (December 2010)

Industry Canada listed test facility No. IC 2042G-2

Date of issue: April 26, 2011

Tested by:

 Approved by:

Stefan Andersson

Niklas Boström

This report may not be reproduced other than in full, except with the prior written approval by Intertek Semko.

1 1. CLIENT INFORMATION

The EUT has been tested by request of

Company: St Jude Medical Systems AB
Box 6350
751 35 Uppsala
Sweden

Name of contact: Mattias Dahlberg

2 2. EQUIPMENT UNDER TEST (EUT)

2.1 2.1 Identification of the EUT according to the manufacturer/client declaration

Equipment: AO Interface Unit
Type / Model: N/A
Brand name: N/A
Serial number: Unmarked
Manufacturer: St Jude Medical Systems AB
Rating/Supplying voltage: 4 – 8 V DC
Antenna gain: 1,8 dBi
External antenna connector: No
Operating temperature range: 10 to 40 °C
Frequency range: 2400 - 2483,5 MHz
Number of channels: 79
Modulation characteristics: FHSS
Stand by mode supported: No
Low channel 2402 MHz
Mid channel 2441 MHz
High channel 2480 MHz

2.2 2.2 Additional hardware information about the EUT

The EUT consists of the following units:

Unit	Type	Serial number
AO Interface Unit	N/A	Unmarked
AC/DC Adapter	FRIWO, 15.2765	Unmarked

3 TEST SPECIFICATIONS

3.1 Standards

FCC 47 CFR part 15 (2010) Subpart B – Unintentional radiators

FCC 47 CFR part 15 (2010) Subpart C – Intentional Radiators; §15.249 Operation within the bands 902–928 MHz, 2400 – 2483.5 MHz, 5725 – 5850 MHz and 24.0 – 24.25 GHz

RSS-Gen, Issue 3 (December 2010): General Requirements and Information for the Certification of Radiocommunication Equipment

RSS-210, Issue 8 (December 2010): Low Power Licence-Exempt Radio communication Devices (All Frequency Bands); Category I Equipment.

Measurements methods according to

ANSI C63.4-2009 - Methods of Measurements of Radio-Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40 GHz

and

ANSI C63.10-2009 - Standard for Testing Unlicensed Wireless Devices

3.2 Additions, deviations and exclusions from standards

No deviations or exclusions have been made from standards

3.3 Test facility

Measurements were performed at Intertek Semko AB, located in Stockholm, Sweden.

3.4 Test set-up

The EUT was connected to a measuring instrument by cable if not otherwise specified in the report.

3.5 Test conditions

If not additionally specified, the tests were performed under the following environmental conditions:

Parameter	Normal
Supplying voltage, V	120 V AC (AC/DC adapter)
Air temperature, °C	20-25

4 TEST SUMMARY

The results in this report apply only to the tested sample:

Test	FCC Reference	IC Reference	Result
Radiated output power	15.249	RSS-210, A2.9	Pass
Occupied bandwidth	15.215(c)	RSS-GEN, 4.6.1	Pass
Out of band spurious emission, radiated	15.249	RSS-210, A2.9	Pass
Conducted emission, AC port	15.207	RSS-Gen Table 4	Pass*

NT = Not Tested

NA = Not Applicable

* The measured result is below the limit by a margin less than the measurement uncertainty; it is therefore not possible to state compliance based on the 95 % level of confidence. However, the result indicates that compliance is more probable than non-compliance with the specification limit.

5 RADIATED OUTPUT POWER

Date of test: 2011-04-06

Ambient temperature 22 °C Relative humidity 31 %

5.1 Test protocol

Detector	Equivalent Isotropic Radiated Power, [dB μ V/m]		
	Low channel	Mid channel	High channel
Peak	95.9	95.1	94.3
Average	85.3	84.5	83.7

Measurement results are corrected for attenuation in the set-up configuration.

The EUT transmits pulsed emission. Pulse train is 10 ms and transmitter on time is less than 5*0,175 ms. This gives an average factor of -10.6 dB.

5.2 Limit

The equivalent isotropic radiated power shall be equal to or less than 94.0 dB μ V/m Average and 114.0 dB μ V/m Peak.

Fulfil requirements: Yes

6 SPURIOUS EMISSIONS (RADIATED)

Date of test: 2011-04-06

Ambient temperature: 22 °C Relative humidity: 31 %

6.1 Measurement uncertainty

Radiated disturbance electric field intensity, 30 – 1000 MHz: ± 4,6 dB
Radiated disturbance electric field intensity, 1000 – 26000 MHz: ± 6,0 dB

The measurement uncertainty describes the overall uncertainty of the given measured value during operation of the EUT. Measurement uncertainty is calculated in accordance with EA-4/02-1997. The uncertainty is given with a level of confidence of approximately 95% (k=2).

6.3 Measurement set-up

Test site Semi-anechoic shielded chamber

The radiated disturbance electric field intensity was measured in a semi-anechoic chamber at a distance of 3 m and the EUT was placed on a non-metallic table, 0,8 m above the reference ground plane. The specified test mode was enabled. Test set-up photos are given below.

An overview sweep with peak detection of the electric field intensity was performed with the measurement receiver in max-hold and with the antenna placed 1,5 m above the floor. The polarisation was horizontal and vertical. The measurements were repeated with the EUT rotated in 90-degree steps.

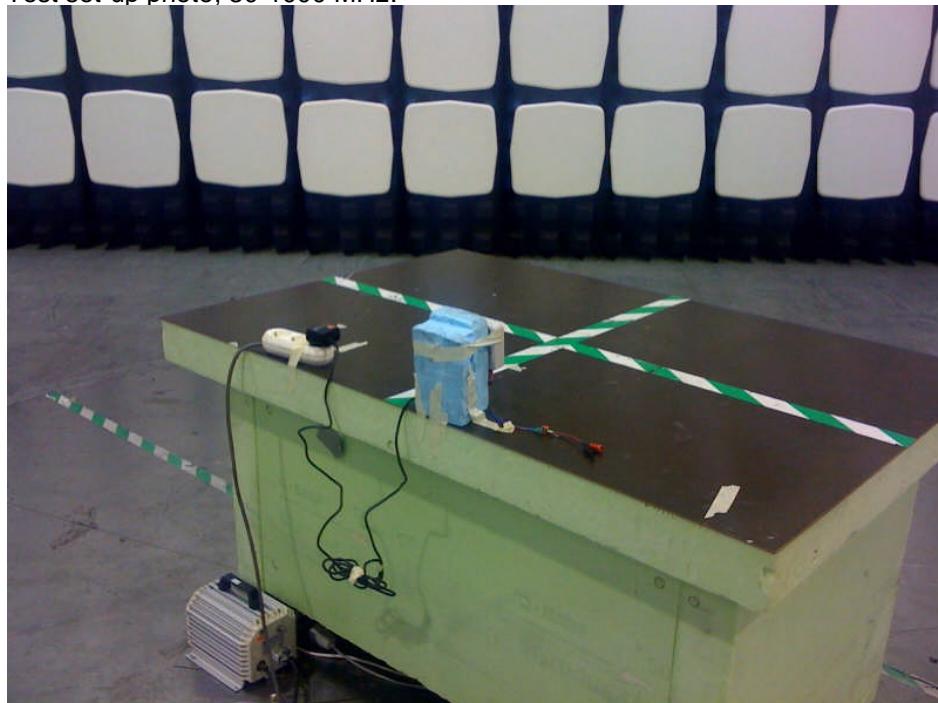

Above 1 GHz the overview sweep was performed in a fully anechoic chamber.

At the frequencies where high disturbance levels were found a search for max disturbance level was performed. With the EUT and antenna in the worst-case configuration new measurements with the correct detector(s) were carried out.

Example calculation

Measured level [$\text{dB}\mu\text{V/m}$] = Analyser reading [$\text{dB}\mu\text{V}$] + cable loss [dB] – preamplifier gain [dB] + antenna factor [1/m]

8 CONDUCTED EMISSION, AC PORT

8.1 Test equipment

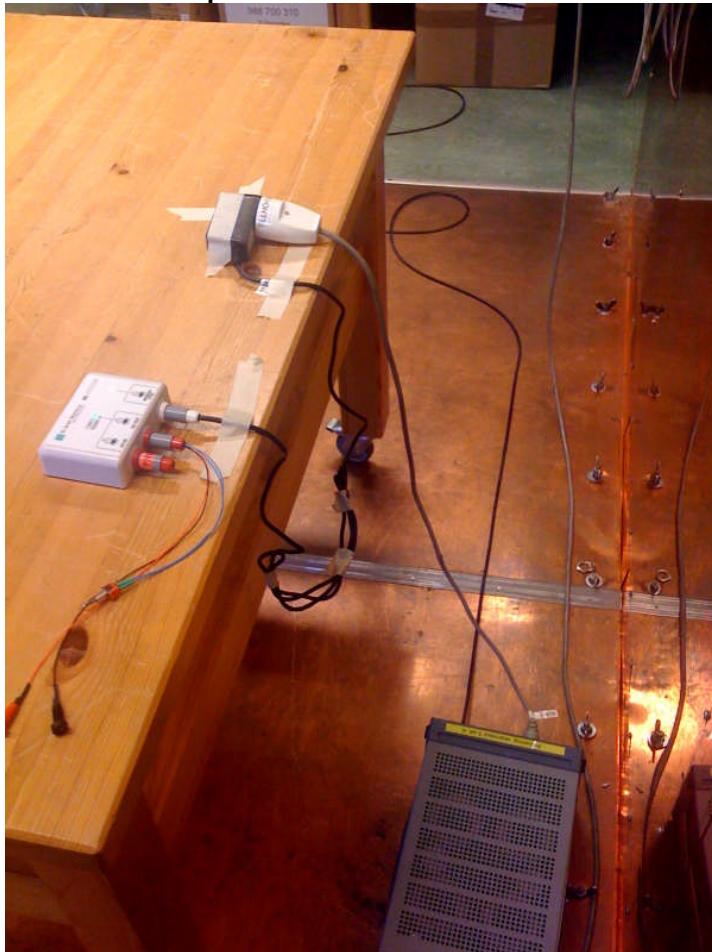

Equipment	Manufacturer	Type	Inv. No.	Calibration due date
Signal Analyzer	Rhode & Schwarz	ESCI	31686	2011-12
Cable	-	-	9883	2011-07
AMN	Rhode & Schwarz	ESH3-Z5	8768	2011-07

Measurement uncertainty

Conducted disturbance, 0.15 – 30 MHz: $\pm 3,6$ dB

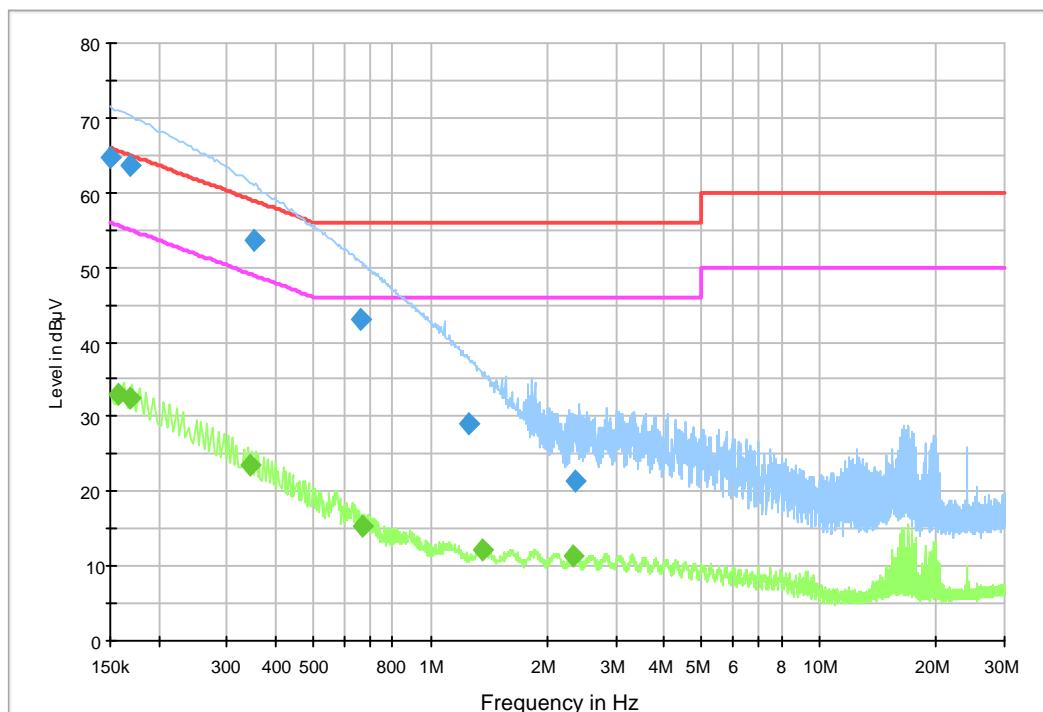

The measurement uncertainty describes the overall uncertainty of the given measured value during operation of the EUT. Measurement uncertainty is calculated in accordance with EA-4/02-1997. The uncertainty is given with a level of confidence of approximately 95% (k=2).

8.2 Test set-up

8.3 Test protocol

Date of test: 2011-04-21

SPURIOUS EMISSIONS LEVEL RADIATED				
Frequency- [MHz]	Detector QP/Av/Pk	Measured value [dB μ V]	Limits [dB μ V]	Comment / Note
0.150	QP	64.6	66.0	1
0.168	QP	63.5	65.1	1
0.352	QP	53.7	58.9	
0.660	QP	42.9	56.0	
1.260	QP	29.1	56.0	
2.348	QP	21.4	56.0	
0.158	Av	32.9	55.6	
0.168	Av	32.3	55.1	
0.344	Av	23.6	49.1	
0.672	Av	15.3	46.0	
1.360	Av	12.2	46.0	
2.328	Av	11.4	46.0	

- 1) The measured result is below the limit by a margin less than the measurement uncertainty; it is therefore not possible to state compliance based on the 95 % level of confidence. However, the result indicates that compliance is more probable than non-compliance with the specification limit.
