<u>350 Transmitter   OpDes.pdf</u> : functional description

This remote control allows you to correct your dog remotely by triggering emission of beep sounds or static stimulations of different levels from weak to strong.

The data transmitted from the remote control towards the collar are binary with a flow rate of about 4kbit / s.
This data contains addressing, product code and the level of the sanction. No information goes from the collar to the remote control.

The modulation is OOK type. The carrier frequency is 914.98575MHz.
