RE: GPRS-Disable Attestation for U5X-HUBPLUS/8310A-HUBPLUS

To Whom It May Concern:

The HUB-PLUS product is a residential alarm system. It communicates to the cloud via either broadband or cellular. The cellular modem (Telit ME310G1-WW) communicates via LTE (Cat-M1) technology. It also has the capability to fall back to older GPRS technology.

Alula has designed the product firmware so that it disables the GPRS fallback capability of the Telit ME310G1-WW modem. Therefore, the GPRS radio bands will not be used by the HUB-PLUS product.

Sincerely,

By:
