FCC Part 15.231 Test Data

433.92 MHz Smoke Detector

Model: 56-0083-03 RevA00 for

Resolution Engineering, Inc. 1402 Heggen Street Hudson, WI 54016 Contact: Josh Gathje

Testing Conducted By:

Rhein Tech Laboratories, Inc. 360 Herndon Parkway, Suite 1400 Herndon, VA 20170 RTL Test Engineer: Dan Baltzell

RTL Project/Report Number: 2016235

November 29, 2017

This report may not be reproduced, except in full, without the full written approval of Rhein Tech Laboratories, Inc. and Resolution Engineering. Test results relate only to the item tested.

These tests are accredited and meet the requirements of ISO/IEC 17025 as verified by ANAB. Refer to certificate and scope of accreditation AT-1445.

Testing Represented in Report

The data and limits presented in this report are for radiated emissions per 15.231(b)(2) which references 15.35(b), and peak limiting for restricted bands per 15.209(e), which again references 15.35(b)(2), as procured by Resolution Engineering. No average data is presented in this report. Data is also presented for spurious, non-harmonic radiated emissions per 15.209. The Equipment Under Test (EUT) was the **433.92 MHz Smoke Detector (RTL Bar Code 22272, 22679)**.

Test Procedure

Radiated fundamental and spurious emissions were tested at three meters. The EUT was tested in the three orthogonal planes with the receive antenna in both polarities. The emissions were maximized; that is, the measurement antenna height was varied between 1 and 4 m, and the EUT was rotated through 360° on a rotating turntable until the maximum emissions were found. Both horizontal and vertical measurement antenna polarizations were used. A resolution bandwidth of 120 kHz was used for frequencies less than 1000 MHz, and a resolution bandwidth of 1 MHz was used for frequencies greater than or equal to 1000 MHz. The video bandwidth was set to a value at least three times greater than the resolution bandwidth.

EUT Disposition

The EUT was adapted to continuously transmit for testing purposes.

| Emission Frequency (MHz) | Analyzer Reading (dBuV) | Site Correction Factor (dB/m) | Emission Level (dBuV/m) | Limit (dBuV/m) | Margin (dB) | Pass/Fail |
|--------------------------------|-------------------------------|--|-------------------------------|-------------------|----------------|-----------|
| 433.9 | 104.2 | -7.4 | 96.8 | 100.8 | -4.0 | Pass |
| 867.8 | 40.8 | 22.8 | 63.6 | 80.8 | -17.2 | Pass |
| 1301.8 | 27.8 | 26.4 | 54.2 | 74.0 | -19.8 | Pass |
| 1735.7 | 24.0 | 30.5 | 54.5 | 80.8 | -26.3 | Pass |
| 2169.6 | 25.6 | 25.1 | 50.7 | 80.8 | -30.1 | Pass |

15.231 Radiated Spurious Harmonics Emissions Test Data – Peak

All spurious emissions in the applicable frequency range were investigated; only harmonic emissions were present as noted above.

Radiated Emissions Test Equipment

| (MHz) | (kHz) | (kHz) | (MHz) |
| 433.92 | 24.8 | 60.8 | 1.08 |

Transmitter Deactivation

15.231(a)

(1) A manually operated transmitter shall employ a switch that will automatically deactivate the transmitter within not more than 5 seconds of being released.

(2) A transmitter activated automatically shall cease transmission within 5 seconds after activation.
