McLean, VA 22101

Gentlemen:

The attached documentation is provided in support of a formal submission to your organization for an approval of an intentional unlicensed transmitter. On behalf of our client, Aegis Labs has included an application for a Grant of Equipment Authorization pursuant to Subpart C of part 15 of FCC Rules (47 CFR) regarding intentional radiators. The data within the test report demonstrates the equipment was tested in a manner described under Part 2 and 15 of the Code of Federal Regulations.

This is an approval of the SM-17 Smart Monitor (MN: RD-FW7874-11, FCC ID: U6YRD-FW7874), The SM-17 is a device designed to provide video entertainment for one seat in the business class of an aircraft. It will be installed in a swing arm that comes out from the side of the seat. An 802.11abg radio module (Intel PRO/Wireless 2915ABG) will be integrated in the chassis of the SM-17 and the transmitter/receiving antenna is mounted at the bottom of the display facing the passenger.

It was tested with a Panasonic Antennas (MN: R8U3FW7874Z) continuously transmitting and receiving form the Main antenna port.

If there are any additional questions or if further information is needed, please contact us at your earliest convenience.

Sincerely,

A handwritten signature in blue ink, appearing to read "J. Candelas".
