Report No.: GTS201803000228F03

# FCC Report (NFC)

Applicant: Magtek Incorporated

1710 Apollo Court, seal beach, California 90740, United **Address of Applicant:** 

States

Manufacturer/Factory: Magtek Incorporated

1710 Apollo Court, seal beach, California 90740, United Address of

States Manufacturer/Factory:

**Equipment Under Test (EUT)** 

**Product Name:** tDynamo

Model No.: 21079821

Trade Mark: **MAGTEK** 

FCC ID: U73-21079821A0

FCC CFR Title 47 Part 15 Subpart C Section 15.225 **Applicable standards:** 

April 25, 2018 Date of sample receipt:

Date of Test: April 26, 2018-May 10, 2018

Date of report issued: May 11, 2018

PASS \* Test Result:

In the configuration tested, the EUT complied with the standards specified above.

Authorized Signature:

**Robinson Lo Laboratory Manager** 

This results shown in this test report refer only to the sample(s) tested, this test report cannot be reproduced, except in full, without prior written permission of the company. The report would be invalid without specific stamp of test institute and the signatures of compiler and approver.

# 4 Test Summary

Test Item	Section in CFR 47	Result
Antenna Requirement	15.203	Pass
AC Power Line Conducted Emission	15.207	Pass
Field Strength of Fundamental Emissions and Mask Measurement	15.225(a)(b)(c)	Pass
Radiated Emission	15.225(d)&15.209	Pass
20dB Emission Bandwidth	15.225&15.215	Pass
Frequency Stability Measurement	15.225(e)	Pass

Remark:

Pass: The EUT complies with the essential requirements in the standard.

# 4.1 Measurement Uncertainty

Test Item	Frequency Range	Measurement Uncertainty	Notes		
Radiated Emission	9kHz ~ 30MHz	± 4.34dB	(1)		
Radiated Emission	30MHz ~ 1000MHz	± 4.24dB	(1)		
Radiated Emission	1GHz ~ 26.5GHz	± 4.68dB	(1)		
AC Power Line Conducted Emission	0.15MHz ~ 30MHz	± 3.45dB	(1)		
Note (1): The measurement uncertainty is for coverage factor of k=2 and a level of confidence of 95%.

# **5** General Information

# 5.1 General Description of EUT

-	
Product Name:	tDynamo
Model No.:	21079821
Serial No.:	B3B858E
Test sample(s) ID:	GTS201803000228-1
Sample(s) Status	Engineered sample
Hardware:	V08A
Software:	1000003858
Operation Frequency:	13.56MHz
Channel Number:	1
Modulation:	ASK
Antenna type:	Integral Antenna
Antenna gain:	2.0dBi(Max)
Power supply:	Battery: DC 3.7V, 760mAh
	DC 5.0V USB charge

#### 5.2 Test mode

Transmitter mode	Keep the EUT in continuously transmitting.

#### Pre-test mode.

GTS has verified the construction and function in typical operation, The EUT was placed on three different polar directions; i.e. X axis, Y axis, Z axis. which was shown in this test report and defined as follows:

1			<u> </u>	
	Axis	X	Υ	Z
	Field Strength(dBuV/m)	53.78	54.50	54.35

#### **Final Test Mode:**

According to ANSI C63.4 standards, the test results are both the "worst case" and "worst setup": Y axis (see the test setup photo)

### 5.3 Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

#### • FCC —Registration No.: 381383

Global United Technology Services Co., Ltd., Shenzhen EMC Laboratory has been registered and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in files. Registration 381383, January 08, 2018.

### • Industry Canada (IC) —Registration No.: 9079A-2

The 3m Semi-anechoic chamber of Global United Technology Services Co., Ltd. has been registered by Certification and Engineering Bureau of Industry Canada for radio equipment testing with Registration No.: 9079A-2, August 15, 2016.

## 5.4 Test Location

All tests were performed at:

Global United Technology Services Co., Ltd.

Address: No. 301-309, 3/F., Jinyuan Business Building, No.2, Laodong Industrial Zone, Xixiang Road, Baoan District, Shenzhen, Guangdong, China 518102

Tel: 0755-27798480 Fax: 0755-27798960

## 7 Test results and Measurement Data

# 7.1 Antenna requirement:

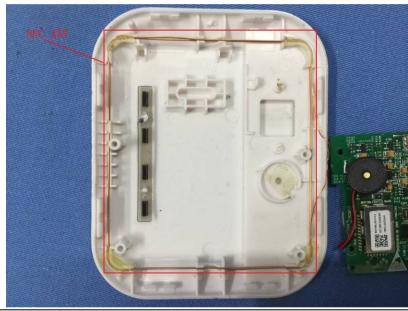

Standard requirement: FCC Part15 C Section 15.203

### 15.203 requirement:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

#### **E.U.T Antenna:**

The antenna is integral antenna, the best case gain of the antenna is 2.0dBi

# 7.2 Conducted Emissions

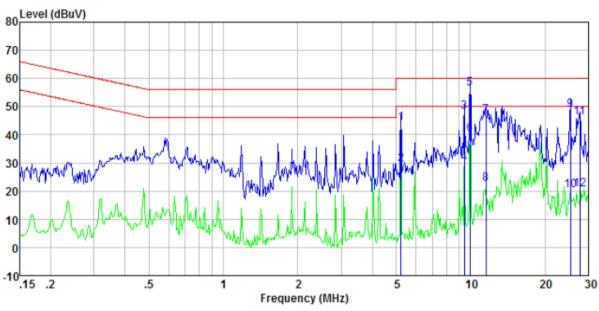

<ul> <li>a LISN that provides a 50ohm/50uH coupling impedance with 50ohm termination. (Please refer to the block diagram of the test setup and photographs).</li> <li>3. Report No.: GTS201803000228F03 < 3m > Test Antenna < 1m ... 4m > EUT Turn Table↔ Receiver-Preamplifier« Test Procedure: Configure the EUT according to ANSI C63.4. The EUT was placed on the top of the turntable 0.8meter above ground. The phase center of the loop receiving antenna mounted antenna tower was placed 3 meters far away from the turntable. Power on the EUT, the turntable was rotated by 360 degrees to 2. determine the position of the highest radiation. 3. The height of the broadband receiving antenna was varied between one meter and four meters above ground to find the maximum emissions field strength of both horizontal and vertical polarization. For each suspected emissions, the antenna tower was scan (from 4. 1M to 4M) and then the turntable was rotated (from 0 degree to 360 degrees) to find the maximum reading. Set the test-receiver system to Peak or CISPR guasi-peak detect function with specified bandwidth under maximum hold mode. When the radiated emissions limits are expressed in terms of the average value of the emissions and pulsed operation is employed, the measurement field strength shall be determined by averaging over one complete pulse train, including blanking intervals, as long as the pulse train does not exceed 0.1 seconds. As an alternative (provided the transmitter operates for longer than 0.1 seconds) or in cases where the pulse train exceeds 0.1 seconds, the measured field strength shall be determined from the average absolute voltage during a 0.1 second interval during which the field strength is at its maximum value. In case the emission is lower than 30MHz, loop antenna has to be used for measurement and the recorded data should be QP measured by receiver. Test Instruments: Refer to section 6.0 for details Test mode: Refer to section 5.2 for details Test results: **Pass** 

Measurement data:

The emission from 9 kHz to 30MHz was pre-tested and found the result was 20dB lower than the limit, and according to 15.31(o), the test result no need to reported.

Report No.: GTS201803000228F03

# 7.5 20dB Emission Bandwidth

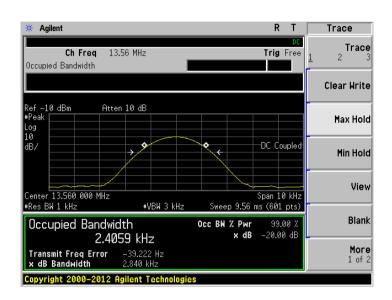

Test Requirement:	FCC Part15 C Section 15.225 and 15.215			
Test Method:	ANSI C63.10:2013			
Limit:	N/A			
Test Procedure:	<ol> <li>According to the follow Test-setup, keep the relative position between the artificial antenna and the EUT.</li> <li>Set the EUT to proper test channel.</li> <li>Max hold the radiated emissions, mark the peak power frequency point and the -20dB upper and lower frequency points.</li> <li>Read 20dB bandwidth.</li> </ol>			
Test setup:	Spectrum Analyzer  E.U.T  Non-Conducted Table  Ground Reference Plane			
Test Instruments:	Refer to section 6.0 for details			
Test mode:	Refer to section 5.2 for details			
Test results:	Pass			

## **Measurement Data**

Test frequency (MHz)	20dB bandwidth (KHz)	Result
13.56	2.840	Pass

### Test plot as follows:

# 7.6 Frequency Stability Measurement

Test Requirement:	FCC Part15 C Section 15.225 (e)			
Test Method:	ANSI C63.10: 2013			
Receiver setup:	RBW=1KHz, VBW=1KHz, Sweep time=Auto			
Limit:	The frequency tolerance of the carrier signal shall be maintained within +/- 0.01% of the operating frequency			
	over a temperature variation of -20 degrees to +50 degrees C at normal supply voltage,			
	for a variation in the primary supply voltage from 85% to 115% of the rated supply voltage at a temperature of 20 degrees C.			
	For battery operated equipment, the equipment tests shall be performed using a new battery.			
Test setup:
